

Package ‘fdasrvf’

February 19, 2015

Maintainer J. Derek Tucker <dtucker@stat.fsu.edu>

Author J. Derek Tucker <dtucker@stat.fsu.edu>

Version 1.4.2

License GPL-3

Title Elastic Functional Data Analysis

Description A library for functional data analysis using the square root velocity framework

Depends R (>= 2.11.0), foreach, mvtnorm, matrixcalc, numDeriv

Suggests doParallel

NeedsCompilation yes

Repository CRAN

Date/Publication 2014-01-29 16:24:06

align_fPCA	<i>Group-wise function alignment and PCA Extractions</i>
------------	--

Description

This function aligns a collection of functions while extracting pincipal components.

Usage

```
align_fPCA(f, time, num_comp = 3, showplot = T, smooth_data = FALSE,
           sparam = 25, parallel = FALSE, cores = 8)
```

Arguments

f	matrix ($N \times M$) of M functions with N samples
time	vector of size N describing the sample points
num_comp	number of principal components to extract (default = 3)
showplot	shows plots of functions (default = T)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using foreach and <code>doParallel</code> pacakge
cores	set number of cores to use with <code>doParallel</code> (default = 2)

Value

Returns a list containing

f0	original functions
fn	aligned functions - matrix ($N \times M$) of M functions with N samples
qn	aligned srvfs - similar structure to fn
q0	original srvfs - similar structure to fn
mqn	srvf mean - vecotr of length N
gam	warping functions - vecotr of length N
Dx	cost function
vf_pca	list containing
q_pca	srvf principal directions
f_pca	f principal directions
latent	latent values
coef	coefficients
U	eigenvectors

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_data")
out = align_fPCA(simu_data$f, simu_data$time)
```

elastic.distance	<i>Calculates two elastic distance</i>
------------------	--

Description

This functions calculates the distances between functions, D_y and D_x , where function 1 is aligned to function 2

Usage

```
elastic.distance(f1, f2, time, lambda = 0)
```

Arguments

f1	sample function 1
f2	sample function 2
time	sample points of functions
lambda	controls amount of warping (default = 0)

Value

Returns a list containing

Dy	amplitude distance
Dx	phase distance

References

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_data")
distances = elastic.distance(simu_data$f[,1], simu_data$f[,2], simu_data$time)
```

 fdasrvf

Elastic Functional Data Analysis

Description

A library for functional data analysis using the square root velocity framework which performs pair-wise and group-wise alignment as well as modeling using functional component analysis

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

f_to_srvf

Convert to SRVF

Description

This function converts functions to srvf

Usage

```
f_to_srvf(f, time)
```

Arguments

f	matrix of functions
time	time

Value

q matrix of srvfs

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_data")
q = f_to_srvf(simu_data$f, simu_data$time)
```

`gauss_model`*Gaussian model of functional data*

Description

This function models the functional data using a Gaussian model extracted from the principal components of the srvfs

Usage

```
gauss_model(fn, time, qn, gam, n = 1, sort_samples = FALSE)
```

Arguments

<code>fn</code>	matrix ($N \times M$) of M aligned functions with N samples
<code>time</code>	vector of size N describing the sample points
<code>qn</code>	matrix ($N \times M$) of M aligned srvfs
<code>gam</code>	warping functions
<code>n</code>	number of random samples ($n = 1$)
<code>sort_samples</code>	sort samples (default = F)

Value

Returns a list containing

<code>fs</code>	random aligned samples
<code>gams</code>	random warping function samples
<code>ft</code>	random function samples

References

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_data")
data("simu_warp")
out1 = gauss_model(simu_warp$fn, simu_data$time, simu_warp$qn, simu_warp$gam, n = 10)
```

gradient	<i>Gradient using finite differences</i>
----------	--

Description

This function takes the gradient of f using finite differences

Usage

```
gradient(f, binsize)
```

Arguments

f	vector with N samples
$binsize$	scalar of time samples

Value

g vector with N samples which is the gradient of f

Examples

```
data("simu_data")
out = gradient(simu_data$f[,1], mean(diff(simu_data$time)))
```

horizFPCA	<i>Horizontal Functional Principal Component Analysis</i>
-----------	---

Description

This function calculates vertical functional principal component analysis on aligned data

Usage

```
horizFPCA(gam, no, showplot = TRUE)
```

Arguments

gam	matrix ($N \times N$) of M of warping functions with N time samples
no	number of principal components to extract
$showplot$	show plots of principal directions (default = T)

Value

Returns a list containing

gam_pca	warping functions principal directions
psi_pca	srvf principal directions
latent	latent values
U	eigenvectors
vec	shooting vectors
mu	Karcher Mean

References

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_warp")
hfpca = horizFPCA(simu_warp$gam, no = 3)
```

optimum.reparam *Align two functions*

Description

This function aligns two srvf functions using Dynamic Programming

Usage

```
optimum.reparam(Q1, T1, Q2, T2, lambda = 0)
```

Arguments

Q1	srvf of function 1
T1	sample points of function 1
Q2	srvf of function 2
T2	sample points of function 2
lambda	controls amount of warping (default = 0)

Value

gam warping function

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_data")
q = f_to_srvf(simu_data$f, simu_data$time)
gam = optimum.reparam(q[,1], simu_data$time, q[,2], simu_data$time)
```

outlier.detection	<i>Outlier Detection</i>
-------------------	--------------------------

Description

This function calculates outlier's using geodesic distances of the SRVFs from the median

Usage

```
outlier.detection(q, time, mq, k = 1.5)
```

Arguments

q	matrix ($N \times M$) of M SRVF functions with N samples
time	vector of size N describing the sample points
mq	median calculated using time_warping
k	cutoff threshold (default = 1.5)

Value

q_outlier	outlier functions
-----------	-------------------

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("toy_data")
data("toy_warp")
q_outlier = outlier.detection(toy_warp$q0, toy_data$time, toy_warp$mqn, k=.1)
```

rgam	<i>Random Warping</i>
------	-----------------------

Description

Generates random warping functions

Usage

```
rgam(N, sigma, num)
```

Arguments

N	length of warping function
sigma	variance of warping functions
num	number of warping functions

Value

gam warping functions

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
gam = rgam(N=101, sigma=.01, num=35)
```

simu_data	<i>Simulated two Gaussian Dataset</i>
-----------	---------------------------------------

Description

A functional dataset where the individual functions are given by: $y_i(t) = z_{i,1}e^{-(t-1.5)^2/2} + z_{i,2}e^{-(t+1.5)^2/2}$, $t \in [-3, 3]$, $i = 1, 2, \dots, 21$, where $z_{i,1}$ and $z_{i,2}$ are *i.i.d.* normal with mean one and standard deviation 0.25. Each of these functions is then warped according to: $\gamma_i(t) = 6\left(\frac{e^{a_i(t+3)/6}-1}{e^{a_i}-1}\right) - 3$ if $a_i \neq 0$, otherwise $\gamma_i = \gamma_{id}$ ($\gamma_{id}(t) = t$) is the identity warping). The variables are as follows: f containing the 21 functions of 101 samples and time which describes the sampling

Usage

```
data("simu_data")
```

Format

A list which contains f and time

simu_warp	<i>Aligned Simulated two Gaussian Dataset</i>
-----------	---

Description

A functional dataset where the individual functions are given by: $y_i(t) = z_{i,1}e^{-(t-1.5)^2/2} + z_{i,2}e^{-(t+1.5)^2/2}$, $t \in [-3, 3]$, $i = 1, 2, \dots, 21$, where $z_{i,1}$ and $z_{i,2}$ are *i.i.d.* normal with mean one and standard deviation 0.25. Each of these functions is then warped according to: $\gamma_i(t) = 6\left(\frac{e^{a_i(t+3)/6}-1}{e^{a_i}-1}\right) - 3$ if $a_i \neq 0$, otherwise $\gamma_i = \gamma_{id}$ ($\gamma_{id}(t) = t$) is the identity warping). The variables are as follows: f containing the 21 functions of 101 samples and time which describes the sampling which has been aligned

Usage

```
data("simu_warp")
```

Format

A list which contains the outputs of the time_warping function

smooth.data	<i>Smooth Functions</i>
-------------	-------------------------

Description

This function smooths functions using standard box filter

Usage

```
smooth.data(f, sparam)
```

Arguments

f	matrix ($N \times M$) of M functions with N samples
sparam	number of times to run box filter

Value

fo smoothed functions

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_data")
fo = smooth.data(simu_data$f, 25)
```

SqrtMean

SRVF transform of warping functions

Description

This function calculates the srvf of warping functions with corresponding shooting vectors

Usage

```
SqrtMean(gam)
```

Arguments

gam matrix ($N \times M$) of M warping functions with N samples

Value

Returns a list containing

mu	Karcher mean psi function
gam_mu	Karcher mean warping function
psi	srvf of warping functions
vec	shooting vectors

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_warp")
out = SqrtMean(simu_warp$gam)
```

time_warping *Group-wise function alignment*

Description

This function aligns a collection of functions using the elastic square-root velocity (srvf) framework.

Usage

```
time_warping(f, time, lambda = 0, method = "mean", showplot = TRUE,
             smooth_data = FALSE, sparam = 25, parallel = FALSE, cores = 2)
```

Arguments

f	matrix ($N \times M$) of M functions with N samples
time	vector of size N describing the sample points
lambda	controls the elasticity (default = 0)
method	warp and calculate to Karcher Mean or Median (options = "mean" or "median", default = "mean")
showplot	shows plots of functions (default = T)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using <code>foreach</code> and <code>doParallel</code> package
cores	set number of cores to use with <code>doParallel</code> (default = 2)

Value

Returns a list containing

f0	original functions
fn	aligned functions - matrix ($N \times M$) of M functions with N samples
qn	aligned srvfs - similar structure to fn
q0	original srvf - similar structure to fn
fmean	function mean or median - vector of length N
mqn	srvf mean or median - vector of length N
gam	warping functions - similar structure to fn
orig.var	Original Variance of Functions
amp.var	Amplitude Variance
phase.var	Phase Variance
qun	Cost Function Value

References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Examples

```
data("simu_data")
out = time_warping(simu_data$f, simu_data$time)
```

toy_data	<i>Distrubted Gaussian Peak Dataset</i>
----------	---

Description

A functional dataset where the individual functions are given by a gaussian peak with locations along the x -axis. The variables are as follows: f containing the 29 functions of 101 samples and time which describes the sampling

Usage

```
data("toy_data")
```

Format

A list which contains f and time

toy_warp	<i>Aligned Distrubted Gaussian Peak Dataset</i>
----------	---

Description

A functional dataset where the individual functions are given by a gaussian peak with locations along the x -axis. The variables are as follows: f containing the 29 functions of 101 samples and time which describes the sampling which as been aligned

Usage

```
data("toy_warp")
```

Format

A list which contains the outputs of the time_warping function

vertFPCA *Vertical Functional Principal Component Analysis*

Description

This function calculates vertical functional principal component analysis on aligned data

Usage

```
vertFPCA(fn, time, qn, no, showplot = TRUE)
```

Arguments

fn	matrix ($N \times M$) of M aligned functions with N samples
time	vector of size N describing the sample points
qn	matrix ($N \times M$) of M of aligned srvfs
no	number of principal components to extract
showplot	show plots of principal directions (default = T)

Value

Returns a list containing

q_pca	srvf principal directions
f_pca	f principal directions
latent	latent values
coef	coefficients
U	eigenvectors
