

Package ‘RcmdrPlugin.seeg’

February 19, 2015

Type Package

Title Rcmdr Plugin for seeg

Version 1.0

Date 2013-01-06

Author Miguel F. Acevedo

Maintainer Miguel F. Acevedo <acevedo@unt.edu>

Description Supports the text book Acevedo, M.F (2013) ``Data Analysis and Statistics for Geography, Environmental Science, and Engineering'' CRC Press

License GPL-2

Depends Rcmdr, seeg, spatstat, sgeostat

RcmdrPlugin.seeg-package*Statistics for Environmental Science, Engineering, and Geography*

Description

Used in Acevedo, M.F. 2013. "Data Analysis and Statistics for Geography, Environmental Science, and Engineering", CRC press.

Details

Package:	RcmdrPlugin.seeg
Type:	Package
Version:	1.0
Date:	2013-01-06
License:	GPL-2

Package to use the seeg package from the Rcmdr (Fox 2005, 2007)

To start the RcmdrPlugin.seeg:

1.- run the R Commander by loading it as package [Rcmdr](#) or by using `Commander()` if the Rcmdr package is already loaded

2.- select RcmdrPlugin.seeg from menu Tools -> Load Rcmdr Plug-in(s) ...

Note: once the RcmdrPlugin.seeg has been loaded, the `options()$Rcmdr` should show "RcmdrPlugin.seeg" in the \$plugins component.

3.- during the same R session, after the RCommander is closed, it can be re-run simply with `Commander()` and the RcmdrPlugin.seeg will re-run directly because of the `options()$Rcmdr` have been set.

Optionally, if you want RcmdrPlugin.seeg to load automatically upon starting Rcmdr set options using `options(Rcmdr=list(plugins="RcmdrPlugin.seeg"))`

RcmdrPluginseeg

Rcmdr Plugin seeg functions

Description

Functions for the seeg plugin of package [Rcmdr](#). For details of the Rcmdr see Fox(2005, 2007).

Usage

```
ecdfPlot()
tsPlot()
acfPlot()
edaPlot()
scangeoEASppp()
scangeoEASras()
convertToppp()
quadChisqppp()
quadPoisppp()
nnGKppp()
nnGKenvppp()
varCal()
SemiVarCov()
MakeSemiVarCov()
OKrigingCmd()
PlotKriged()
```

Arguments

These functions do not require arguments. Functions are invoked by the menu items of RcmdrPlugin.seeg. The user does not really need to employ these functions. Their role are as follows:

ecdfPlot: dialog to pick a variable from a dataset and call [ecdf](#) function of seeg

tsPlot: dialog to pick a variable from a dataset and call [ts.plot](#) function

acfPlot: dialog to pick a variable from a dataset and call [acf](#) function

edaPlot: dialog to pick a variable from a dataset and call [eda6](#) function of seeg

scangeoEASppp: dialog to set a name for dataset to be read from a geoEAS file using [scan.geoeas.cpp](#) of seeg

scangeoEASras: dialog to set a name for dataset to be read from a geoEAS file using [scan.map.ras](#) of seeg

convertToppp: dialog to select a dataset and convert to ppp using [makeppp](#) of seeg

quadChisqppp: dialog to select a dataset and perform quadrat analysis by Chisquare using [quad.chisq.cpp](#) of seeg

quadPoisppp: dialog to select a dataset and perform quadrat analysis by Poisson using [quad.poisson.cpp](#) of seeg

nnGKppp: invokes function nnGK.cpp of seeg to perform Nearest Neighbor analysis using [nnGK.cpp](#) of seeg

nnGKenvppp: dialog to select number of Monte Carlo realizations and calculate envelopes for G and K using [nnGKenv.cpp](#) of seeg

varCal: dialog to set arguments for semivariogram calculations using [vario](#) of seeg

SemiVarCov: dialog to set model of Semi-Variance and Covariance using [model.semivar.cov](#) of seeg

MakeSemiVarCov: dialog to make a model of Semi-Variance and Covariance using [make.variogram](#) of seeg

OKrigingCmd: dialog to set arguments for Ordinary Kriging using [Okriging](#) of seeg

PlotKriged: dialog to set arguments to plot a dataset together with its kriged map using [plotkriged](#) of seeg i

Details

To start the RcmdrPlugin.seeg:

1.- run the R Commander by loading it as package [Rcmdr](#) or by using [Commander\(\)](#) if the Rcmdr package is already loaded

2.- select RcmdrPlugin.seeg from menu Tools -> Load Rcmdr Plug-in(s) ...

Note: once the RcmdrPlugin.seeg has been loaded, the options()\$Rcmdr should show "RcmdrPlugin.seeg" in the \$plugins component.

3.- during the same R session, after the RCommander is closed, it can be re-run simply with [Commander\(\)](#) and the RcmdrPlugin.seeg will re-run directly because of the options()\$Rcmdr have been set.

Optionally, if you want RcmdrPlugin.seeg to load automatically upon starting Rcmdr set options using [options\(Rcmdr=list\(plugins="RcmdrPlugin.seeg"\)\)](#)

Value

These functions generate a dialog box for the user to enter arguments for a call one of seeg functions to execute the work.

Note

Input files are in 'datafiles.zip' in directory 'datafiles' and organized by chapters of Acevedo (2013). The examples below require input files.
