Examples and Figures from Wang et al. Journal of Circadian Rhythms 2011

Carlos Gonzalez, Berkley Shands, Elena Deych, William Shannon

January 15, 2016

First we need to load the `Actigraphy` package:

```
>         library(Actigraphy)
>         library(lattice)
```

1 Figure 1(a)

```
>         ### Load Data
>         data(weekday)
>         ### Data Management
>         data2 <- NULL
>         data2$act <- weekday[,3]
>         data2$t <- weekday[,2]
>         data2$day <- weekday[,1]
>         data2$date <- factor(data2$day, levels=c("Monday", "Tuesday", "Wednesday", "Thur
>         ### Plot Options and Parameters
>         lb <- c("Midnight", "6AM", "Noon", "6PM", "Midnight")
>         L <- 1440
>         xat <- c(0, L/4, L/2, 3*L/4, L)
>         ### Plot Figure
>         xyplot(act ~ t | date, data=data2, as.table=TRUE,
+                 main="Subject 002 Activity from Monday to Friday",
+                 scales=list(x=list(at=xat, labels=lb)), cex.main=0.5,
+                 layout=c(1, 5, 1), xlim=c(0, L), xlab="(a)",
+                 ylab="Activity", panel=function(x,y) {
+                         fbase <- create.fourier.basis(rangeval=c(0,L), nbasis=9)
+                         fpar <- fdPar(fbase)
+                         fd <- smooth.basis(c(1:L), y, fpar)
+                         panel.xyplot(x, y, type="h")
+                 })
```

2 Figure 2

```
>         ### Load Data
>         data(act_8pt)
>         data(clinic_8pt)
```

```
>         ### Plot Options and Parameters
>         lb <- c("Midnight", "6AM", "Noon", "6PM", "Midnight")
>         L <- 1440
>         xat <- c(0, L/4, L/2, 3*L/4, L)
>         matchid <- fda.matchid(act_8pt[,-1], clinic_8pt, type="factor", grouplab=c("AHI"
>         idhigh <- paste("Subj", colnames(matchid$mat)[matchid$cov$"NO AHI" != 1])
>         idlow <- paste("Subj", colnames(matchid$mat)[matchid$cov$"NO AHI" == 1])
>         idorder <- c(idhigh, idlow)
>         datavec <- matchid$mat
>         dim(datavec) <- NULL
>         datanew <- data.frame(y=datavec, id=rep(paste("Subj", colnames(matchid$mat)), ea
>         datanew$id <- factor(datanew$id, idorder)
>         ### Plot Figure
>         xyplot(y~t|id, data=datanew, as.table=TRUE,
+                 main="Circadian Activity from 8 Subjects",
+                 ylab="Activity", xlab="", cex.main=.7,
+                 scales=list(x=list(at=xat, labels=lb)), cex=.05,
+                 type="p", layout=c(4, 2, 1), ylim=c(0, 1200),
+                 xlim=c(0, L), panel=function(x,y) {
+                         fbase <- create.fourier.basis(rangeval=c(0, L), nbasis=9)
+                         fpar <- fdPar(fbase)
+                         sm <- smooth.basis(c(1:L), y, fpar)
+                         panel.xyplot(x, y, col=1, cex=0.1)
