AHNnD

*AHNnD***Description**

Function to train an Artificial Hydrocarbon Network (AHN).

Usage

```
AHNnD(Sigma, n, eta, maxIter = 2000)
```

Arguments

Sigma	a list with two data frames. One for the inputs X, and one for the outputs Y.
n	number of particles to use.
eta	learning rate of the algorithm. Default is 0.01.
maxIter	maximum number of iterations.

Value

an object of class "ahn" with the following components:

- network: structure of the AHN trained.
- Yo: original output variable.
- Ym: predicted output variable.
- eta: learning rate.
- minOverallError: minimum error achieved.
- variableNames: names of the input variables.

Examples

```
# Create data
x <- 2 * runif(1000) - 1;
x <- sort(x)

y <- (x < 0.1) * (0.05 * runif(100) + atan(pi*x)) +
      (x >= 0.1 & x < 0.6) * (0.05 * runif(100) + sin(pi*x)) +
      (x >= 0.6) * (0.05 * runif(100) + cos(pi*x))

# Create Sigma list
Sigma <- list(X = data.frame(x = x), Y = data.frame(y = y))

# Train AHN
ahn <- AHNnD(Sigma, 5, 0.01, 500)
```

```
plot.ahn          #' plotAHN #' #' @param ahn a list produced from the AHNnD
                 function. #' #' @return visualization of the AHN. #' @export #' #
@examples #' # Create data #' x <- 2 * runif(1000) - 1; #' x <- sort(x)
#' #' y <- (x < 0.1) * (0.05 * runif(100) + atan(pi*x)) + #' (x >= 0.1
& x < 0.6) * (0.05 * runif(1000) + sin(pi*x)) + #' (x >= 0.6) * (0.05
* runif(1000) + cos(pi*x)) #' #' # Create Sigma list #' Sigma <- list(X
= data.frame(x = x), Y = data.frame(y = y)) #' #' # Train AHN #' ahn
<- AHNnD(Sigma, 5, 0.01, 500) #' #' # Plot AHN #' plotAHN(ahn)
#' plotAHN <- function(ahn) vis <- CreateNodesEdges(ahn)
graph <- igraph::graph_from_data_frame(vis$edges, directed =
FALSE, vertices = vis$nodes) ggraph(graph, layout = 'graphopt')
+ geom_edge_link(aes(start_cap = label_rect(node1.name),
end_cap = label_rect(node2.name))) + geom_node_text(label
= vis$nodes$label) + theme_void() Plot Artificial Hydrocarbon
Network
```

Description

Plot method for objects of class ahn.

Usage

```
## S3 method for class 'ahn'
plot(x, ...)
```

Arguments

x an object of class "ahn" produced from the **AHNnD** function.
... further arguments passed to visNetwork functions.

Value

dynamic visualization of the AHN.

Examples

```
# Create data
x <- 2 * runif(1000) - 1;
x <- sort(x)

y <- (x < 0.1) * (0.05 * runif(100) + atan(pi*x)) +
(x >= 0.1 & x < 0.6) * (0.05 * runif(1000) + sin(pi*x)) +
(x >= 0.6) * (0.05 * runif(1000) + cos(pi*x))

# Create Sigma list
Sigma <- list(X = data.frame(x = x), Y = data.frame(y = y))
```

```
# Train AHN
ahn <- AHNnD(Sigma, 5, 0.01, 500)

# Plot AHN
plot(ahn)
```

SimAHNnD*SimAHNnD***Description**

Function to simulate a trained Artificial Hydrocarbon Network.

Usage

```
SimAHNnD(ahn, X)
```

Arguments

- | | |
|-----|--|
| ahn | an object of class "ahn" produced from the AHNnD function. |
| X | data frame with the inputs X to be predicted. |

Value

predicted output values for inputs X.

Examples

```
# Create data
x <- 2 * runif(1000) - 1;
x <- sort(x)

y <- (x < 0.1) * (0.05 * runif(100) + atan(pi*x)) +
  (x >= 0.1 & x < 0.6) * (0.05 * runif(1000) + sin(pi*x)) +
  (x >= 0.6) * (0.05 * runif(1000) + cos(pi*x))

# Create Sigma list
Sigma <- list(X = data.frame(x = x), Y = data.frame(y = y))

# Train AHN
ahn <- AHNnD(Sigma, 5, 0.01, 500)

# Test AHN
X <- data.frame(x = x)
ysim <- SimAHNnD(ahn, X)
```

summary.ahn

Summary Artificial Hydrocarbon Network

Description

Summary method for objects of class ahn.

Usage

```
## S3 method for class 'ahn'  
summary(object, ...)
```

Arguments

object	an object of class "ahn" produced from the AHNnD function.
...	further arguments passed to or from other methods.

Value

summary description of the AHN.

Examples

```
# Create data  
x <- 2 * runif(1000) - 1;  
x <- sort(x)  
  
y <- (x < 0.1) * (0.05 * runif(100) + atan(pi*x)) +  
     (x >= 0.1 & x < 0.6) * (0.05 * runif(1000) + sin(pi*x)) +  
     (x >= 0.6) * (0.05 * runif(1000) + cos(pi*x))  
  
# Create Sigma list  
Sigma <- list(X = data.frame(x = x), Y = data.frame(y = y))  
  
# Train AHN  
ahn <- AHNnD(Sigma, 5, 0.01, 500)  
  
# Summary AHN  
summary(ahn)
```
