Description The Economic Policy Institute (<<http://www.epi.org/>>) provides researchers, media, and the public with easily accessible, up-to-date, and comprehensive historical data on the American labor force. It is compiled from Economic Policy Institute analysis of government data sources. Use it to research wages, inequality, and other economic indicators over time and among demographic groups. Data is usually updated monthly.

get_black_white_wage_gap	<i>Retrieve the percent by which hourly wages of black workers are less than hourly wages of white workers</i>
--------------------------	--

Description

The black-white wage gap is the percent by which hourly wages of black workers are less than hourly wages of white workers. It is also often expressed as a wage ratio (black workers' share of white workers' wages) by subtracting the gap from 100 percent.

Usage

```
get_black_white_wage_gap(by = NULL)
```

Arguments

by NULL or g for a partition by gender

Details

- A median black-white wage gap of 26.2 percent means that a typical black worker is paid 26.2 percent less per hour than a typical white worker.
- An average black-white wage gap of 26.6 percent means that on average black workers are paid 26.6 percent less per hour than white workers.
- A regression-based black-white wage gap of 15.2 percent means that on average black workers are paid 15.2 percent less per hour than white workers, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_black_white_wage_gap()  
  
get_black_white_wage_gap("g")
```

get_college_wage_premium

Retrieve the percent by which hourly wages of college graduates exceed those of otherwise equivalent high school graduates

Description

A regression-based college wage premium of 56.1 percent means that on average workers with a college degree are paid 56.1 percent more per hour than workers whose highest education credential is a high school diploma, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Usage

```
get_college_wage_premium(by = NULL)
```

Arguments

by NULL or g for a partition by gender

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_college_wage_premium()
```

```
get_college_wage_premium("g")
```

```
get_employment_to_population_ratio
```

Retrieve the share of the civilian noninstitutional population that is employed

Description

Retrieve the share of the civilian noninstitutional population that is employed

Usage

```
get_employment_to_population_ratio(by = NULL)
```

Arguments

by NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_employment_to_population_ratio()

get_employment_to_population_ratio("r")

get_employment_to_population_ratio("grae")
```

get_gender_wage_gap	<i>Retrieve the percent by which hourly wages of female workers are less than hourly wages of male workers</i>
---------------------	--

Description

The gender wage gap is the percent by which hourly wages of female workers are less than hourly wages of male workers. It is also often expressed as a wage ratio (women's share of men's wages) by subtracting the gap from 100 percent.

Usage

```
get_gender_wage_gap(by = NULL)
```

Arguments

by NULL or r for a partition by race

Details

- A median gender wage gap of 17.3 percent means that a typical woman is paid 17.3 percent less per hour than a typical man.
- An average gender wage gap of 19.7 percent means that on average women are paid 19.7 percent less per hour than men.
- A regression-based gender wage gap of 21.7 percent means that on average women are paid 21.7 percent less per hour than men, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_gender_wage_gap()

get_gender_wage_gap("r")
```

get_hispanic_white_wage_gap

Retrieve the percent by which hourly wages of Hispanic workers are less than hourly wages of white workers

Description

The Hispanic-white wage gap is the percent by which hourly wages of Hispanic workers are less than hourly wages of white workers. It is also often expressed as a wage ratio (Hispanic workers' share of white workers' wages) by subtracting the gap from 100 percent.

Usage

```
get_hispanic_white_wage_gap(by = NULL)
```

Arguments

by NULL or g for a partition by gender

Details

- A median Hispanic-white wage gap of 29.6 percent means that a typical Hispanic worker is paid 29.6 percent less per hour than a typical white worker.
- An average Hispanic-white wage gap of 30.1 percent means that on average Hispanic workers are paid 30.1 percent less per hour than white workers.
- A regression-based Hispanic-white wage gap of 11.1 percent means that on average Hispanic workers are paid 11.1 percent less per hour than white workers, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_hispanic_white_wage_gap()
```

```
get_hispanic_white_wage_gap("g")
```

`get_labor_force_participation_rate`

Retrieve the share of the civilian noninstitutional population that is in the labor force

Description

(i.e., working or looking for work)

Usage

`get_labor_force_participation_rate(by = NULL)`

Arguments

`by` NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_labor_force_participation_rate()
get_labor_force_participation_rate("r")
get_labor_force_participation_rate("grae")
```

`get_long_term_unemployment`

Retrieve the share of the labor force that has been unemployed for six months or longer

Description

Retrieve the share of the labor force that has been unemployed for six months or longer

Usage

`get_long_term_unemployment(by = NULL)`

Arguments

`by` NULL or character string with any combination of `g` (Gender), `r` (Race), `a` (Age), `e` (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

`tbl_df` with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_long_term_unemployment()  
get_long_term_unemployment("r")  
get_long_term_unemployment("grae")
```

```
get_median_and_mean_wages
```

Retrieve the hourly wage in the middle of the wage distribution

Description

The median wage is the hourly wage in the middle of the wage distribution; 50 percent of wage earners earn less and 50 percent earn more. The average wage is the arithmetic mean of hourly wages; or, the sum of all workers' hourly wages divided by the number of workers.

Usage

```
get_median_and_mean_wages(by = NULL)
```

Arguments

`by` NULL or character string with any combination of `g` (Gender) or `r` (Race), i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

Value

`tbl_df` with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_median_and_mean_wages()

get_median_and_mean_wages("r")

get_median_and_mean_wages("gr")
```

`get_non_high_school_wage_penalty`

Retrieve the percent by which hourly wages of workers without a high school diploma (or equivalent) are less than wages of otherwise equivalent workers who have graduated from high school

Description

A regression-based non-high school wage penalty of 21.8 percent means that on average workers without a high school diploma are paid 21.8 percent less per hour than workers with a high school diploma, all else held equal (controlling for gender, race and ethnicity, education, experience, and geographic location).

Usage

```
get_non_high_school_wage_penalty(by = NULL)
```

Arguments

`by` NULL or g for a partition by gender

Value

`tbl_df` with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
## Not run:
get_non_high_school_wage_penalty()

get_non_high_school_wage_penalty("g")

## End(Not run)
```

get_underemployment *Retrieve the share of the labor force that is "underemployed"*

Description

Underemployment is the share of the labor force that either 1) is unemployed, 2) is working part time but wants and is available to work full time (an "involuntary" part timer), or 3) wants and is available to work and has looked for work in the last year but has given up actively seeking work in the last four weeks ("marginally attached" worker).

Usage

```
get_underemployment(by = NULL)
```

Arguments

by NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_underemployment()  
get_underemployment("r")  
get_underemployment("grae")
```

get_unemployment *Retrieve the share of the labor force without a job*

Description

Retrieve the share of the labor force without a job

Usage

```
get_unemployment(by = NULL)
```

Arguments

by NULL or character string with any combination of g (Gender), r (Race), a (Age), e (Education). i.e. if you want to retrieve unemployment data by gender, race and education, you would set this parameter to "gre".

Value

tbl_df with data filtered by the selected criteria.

Note

See get_unemployment_by_state() for information on retrieving unemployment by state+race.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_unemployment()  
get_unemployment("r")  
get_unemployment("grae")
```

get_unemployment_by_state
Retrieve the share of the labor force without a job (by state)

Description

Retrieve the share of the labor force without a job (by state)

Usage

```
get_unemployment_by_state(by = NULL)
```

Arguments

by NULL or r for a partition by race.

Value

tbl_df with data filtered by the selected criteria.

Note

See get_unemployment() for other unemployment extracts..

References

[Economic Policy Institute Data Library](#)

Examples

```
get_unemployment_by_state()
```

```
get_unemployment_by_state("r")
```

```
get_wages_by_education
```

Retrieve the average hourly wages of workers disaggregated by the highest level of education attained

Description

Wages by education are the average hourly wages of workers disaggregated by the highest level of education attained. Employment shares provide the distribution of educational attainment for workers of each gender, racial, and ethnic group as a share of total employed for each group.

Usage

```
get_wages_by_education(by = NULL)
```

Arguments

by NULL or character string with any combination of g (Gender) or r (Race), i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_wages_by_education()
```

```
get_wages_by_education("r")
```

```
get_wages_by_education("gr")
```

`get_wages_by_percentile`*Retrieve wages at ten distinct points in the wage distribution*

Description

Wage percentiles are wages at ten distinct points in the wage distribution: deciles and the 95th percentile. The 95–50 and 50–10 wage ratios show how much greater wages are at the top than the middle, and at the middle than the bottom, respectively.

Usage

```
get_wages_by_percentile(by = NULL)
```

Arguments

`by` NULL or character string with any combination of `g` (Gender) or `r` (Race), i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

Value

`tbl_df` with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
get_wages_by_percentile()
```

```
get_wages_by_percentile("r")
```

```
get_wages_by_percentile("gr")
```

`get_wage_ratios`*Retrieve the level of inequality within the hourly wage distribution.*

Description

The 95–50 and 50–10 wage ratios are representations of the level of inequality within the hourly wage distribution. The larger the ratio, the greater the gap between the top and the middle or the middle and the bottom of the wage distribution.

Usage

```
get_wage_ratios(by = NULL)
```

Arguments

by NULL or character string with any combination of g (Gender) or r (Race), i.e. if you want to retrieve unemployment data by gender and race, you would set this parameter to "gr".

Details

- A 50–10 wage ratio of 1.91 means that workers at the 50th percentile of the wage distribution are paid 1.91 times more per hour than the workers at the 10th percentile.
- A 95–50 wage ratio of 3.28 means that workers at the 95th percentile of the wage distribution are paid 3.28 times more per hour than the workers at the 50th percentile.

Value

tbl_df with data filtered by the selected criteria.

References

[Economic Policy Institute Data Library](#)

Examples

```
## Not run:  
get_wage_ratios()  
  
get_wage_ratios("r")  
  
get_wage_ratios("gr")  
  
## End(Not run)
```
