

# Package ‘owmr’

January 14, 2017

**Title** OpenWeatherMap API Wrapper

**Version** 0.7.2

**Description** Accesses OpenWeatherMap's (owm) <<https://openweathermap.org/>> API. 'owm' itself is a service providing weather data in the past, in the future and now. Furthermore, 'owm' serves weather map layers usable in frameworks like 'leaflet'. In order to access the API, you need to sign up for an API key. There are free and paid plans. Beside functions for fetching weather data from 'owm', 'owmr' supplies tools to tidy up fetched data (for fast and simple access) and to show it on leaflet maps.

**URL** <https://github.com/crazycapivara/owmr/>,  
<https://crazycapivara.github.io/owmr/>

**BugReports** <https://github.com/crazycapivara/owmr/issues/>

**Depends** R (>= 3.1.2)

**Imports** magrittr, httr, jsonlite

**License** MIT + file LICENSE

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 5.0.1

**Suggests** leaflet, whisker, testthat, covr

**Author** Stefan Kuethe [aut, cre]

**Maintainer** Stefan Kuethe <[crazycapivara@gmail.com](mailto:crazycapivara@gmail.com)>

**NeedsCompilation** no

**Repository** CRAN

**Date/Publication** 2017-01-14 16:30:02

## Index 20

---

add_owm_tiles	<i>Add owm tiles to leaflet map.</i>
---------------	--------------------------------------

---

### Description

Add owm tiles to leaflet map.

### Usage

```
add_owm_tiles(map, layer_name = "temp", ...)
```

### Arguments

map	leaflet map object
layer_name	owm layer name, see <a href="#">owm_layers</a>
...	optional parameters passed to <a href="#">addTiles</a>

### Value

updated map object

## Examples

```
## Not run:
  leaflet() %>% add_owm_tiles() %>%
    addMarkers(data = quakes[1:20, ])

## End(Not run)
```

---

add_weather	<i>Add weather data to leaflet map.</i>
-------------	---

---

## Description

Add weather data to leaflet map.

## Usage

```
add_weather(map, data, lng = NULL, lat = NULL, icon = NULL,
            template = NULL, popup = NULL, ...)
```

## Arguments

map	<a href="#">leaflet</a> map object
data	owm data
lng	numeric vector of longitudes (if NULL it will be taken from data)
lat	numeric vector of latitudes (if NULL it will be taken from data)
icon	vector of owm icon names (usually included in weather column of owm data)
template	template in the form of " <b>&lt;{{name}}&lt;/b&gt;</b> " where variable names in brackets correspond to column names of data (see also <a href="#">render</a> )
popup	vector containing (HTML) content for popups, skipped in case parameter <code>template</code> is given
...	see <a href="#">addMarkers</a>

## Value

updated map object

### Examples

```
## Not run:
owm_data <- find_city("Malaga", units = "metric")$list %>% tidy_up_()
map <- leaflet() %>% addTiles() %>%
  add_weather(owm_data,
    template = "<b>{{name}}</b>, {{main_temp}}°C",
    icon = owm_data$weather_icon)

## End(Not run)
```

---

cbind_weather	<i>Flatten weather column in data frame.</i>
---------------	--

---

### Description

Flatten weather column in data frame.

### Usage

```
cbind_weather(data)
```

### Arguments

data                    data frame containing weather column

### Value

data frame with flattened weather (data)

### Examples

```
## Not run:
get_forecast("Kassel") %>% cbind_weather()

## End(Not run)
```

---

find_cities_by_geo_point	<i>Find cities by geo point.</i>
--------------------------	----------------------------------

---

### Description

Get current weather data for a number of cities around given geo point.

### Usage

```
find_cities_by_geo_point(lat, lon, cnt = 3, ...)
```

**Arguments**

lat            latitude of geo point  
lon            longitude of geo point  
cnt            number of cities  
...            see owm api documentation

**Value**

list containing data frame with weather data

**See Also**

[find\\_city](#)

**Examples**

```
## Not run:  
find_cities_by_geo_point(lat = 51.50853, lon = -0.12574, cnt = 5)  
  
## End(Not run)
```

---

find\_city            *Find city by name or coordinates.*

---

**Description**

Either search for city by name or fetch weather data for a number of cities around geo point.

**Usage**

```
find_city(city = NA, ...)
```

**Arguments**

city            city name (and country code)  
...            see owm api documentation, pass lat and lon to search by coordinates

**Value**

list of weather data for matches

**See Also**

[find\\_cities\\_by\\_geo\\_point](#)

**Examples**

```
## Not run:  
  find_city("London,UK")  
  find_city(lat = 51.50853, lon = -0.12574, cnt = 5)  
  
## End(Not run)
```

---

find\_stations\_by\_geo\_point

*Find stations by geo point.*

---

**Description**

Get weather data from a number of stations around given geo point.

**Usage**

```
find_stations_by_geo_point(lat, lon, cnt = 10, ...)
```

**Arguments**

lat	latitude of geo point
lon	longitude of geo point
cnt	number of stations
...	see owm api documentation

**Value**

data frame

**Examples**

```
## Not run:  
  # get weather data from 7 stations  
  find_stations_by_geo_point(lat = 51.31667, lon = 9.5, cnt = 7)  
  
## End(Not run)
```

---

flatten	<i>Flatten list.</i>
---------	----------------------

---

**Description**

Flatten list.

**Usage**

```
flatten(data)
```

**Arguments**

data	list returned from own
------	------------------------

**Value**

flattened list

**Examples**

```
## Not run:  
get_current("Rio de Janeiro") %>% flatten()  
get_current("Rio de Janeiro") %>% flatten() %>%  
  tidy_up_()  
  
## End(Not run)
```

---

flatten_weather	<i>Parse weather column to (single) data frame.</i>
-----------------	---

---

**Description**

Parse weather column to (single) data frame.

**Usage**

```
flatten_weather(x)
```

**Arguments**

x	weather column (NOT name)
---	---------------------------

**Value**

data frame

## Examples

```
## Not run:
  result <- get_forecast("Kassel", units = "metric")$list
  weather <- flatten_weather(result$weather)
  weather$description %>% print()

## End(Not run)
```

---

get\_current

*Get current weather data for given city.*

---

## Description

Get current weather data for given city.

## Usage

```
get_current(city = NA, ...)
```

## Arguments

city	city name or id
...	see owm api documentation, you can also skip parameter city and pass lat (latitude) and lon (longitude) or zip (zip code) instead

## Value

list

## Examples

```
## Not run:
  get_current("London", units = "metric")
  get_current(2643741, lang = "DE")
  get_current(lon = -0.09184, lat = 51.51279)
  get_current(zip = "94040,US")

## End(Not run)
```

---

get\_current\_for\_group *Get current weather data for multiple cities.*

---

**Description**

Get current weather data for multiple cities.

**Usage**

```
get_current_for_group(city_ids, ...)
```

**Arguments**

city_ids	numeric vector containing city ids
...	see owm api documentation

**Value**

list containing data frame with current weather data of cities

**See Also**

[owm\\_cities](#) dataset in order to lookup city ids

**Examples**

```
## Not run:  
city_ids = c(2831088, 2847639, 2873291)  
result <- get_current_for_group(city_ids)  
result$cnt == nrow(result$list)  
weather_frame <- result$list  
  
## End(Not run)
```

---

get\_current\_from\_station

*Get current weather data from given station.*

---

**Description**

Get current weather data from given station.

**Usage**

```
get_current_from_station(station_id, ...)
```

**Arguments**

station\_id      station id  
...              see owm api documentation

**Value**

list

---

get\_forecast      *Get 3h forecast data.*

---

**Description**

Get 3h forecast data.

**Usage**

```
get_forecast(city = NA, ...)
```

**Arguments**

city              city name or id  
...              see owm api documentation, you can also skip parameter city and pass lat (latitude) and lon (longitude) or zip (zip code) instead

**Value**

list

**Examples**

```
## Not run:  
result <- get_forecast("Kassel", units = "metric")  
names(result)  
get_forecast("London", cnt = 10)  
get_forecast(lat = -22.90278, lon = -22.90278, cnt = 3, units = "metric")  
  
## End(Not run)
```

---

get\_forecast\_daily      *Get daily forecast data up to 16 days.*

---

**Description**

Get daily forecast data up to 16 days.

**Usage**

```
get_forecast_daily(city = NA, ...)
```

**Arguments**

city	city name or id
...	see owm api documentation, you can also skip parameter city and pass lat (latitude) and lon (longitude) or zip (zip code) instead

**Value**

list

**Examples**

```
## Not run:  
# 9 day forecast  
result <- get_forecast_daily("London", cnt = 9)  
forecast_frame <- result$list  
  
## End(Not run)
```

---

get\_icon\_url      *Get icon url.*

---

**Description**

Get icon url.

**Usage**

```
get_icon_url(icon)
```

**Arguments**

icon	icon name as returned by owm
------	------------------------------

**Value**

icon url

**Examples**

```
## Not run:
forecast <- get_forecast("London")$list
weather <- flatten_weather(forecast$weather)
icons <- get_icon_url(weather$icon)

## End(Not run)
```

---

owmr

*owmr - An R interface to access OpenWeatherMap's API*

---

**Description**

In order to access the API, you need to sign up for an API key at <https://openweathermap.org/>. For optional parameters (...) in functions see <https://openweathermap.org/api/>

**Examples**

```
## Not run:
# first of all you have to set up your api key
owmr_settings("your_api_key")

# get current weather data for "Kassel" with temperatures in °C
get_current("Kassel", units = "metric")

# get 3h forecast data (7 rows)
get_forecast("London", cnt = 7)

# ...

## End(Not run)
```

---

owmr\_settings

*owmr settings.*

---

**Description**

Set api key.

**Usage**

```
owmr_settings(api_key)
```

**Arguments**

`api_key` owm api key

**Examples**

```
## Not run:  
  owmr_settings(api_key = "your-api-key")  
  
## End(Not run)
```

---

`owm_cities` *owm city list containing ids and coordinates of cities.*

---

**Description**

A dataset containing city ids and coordinates to be used in queries.

**Usage**

```
owm_cities
```

**Format**

data frame with 74071 rows and 4 variables:

**id** city id

**nm** city name

**lat** latitude

**lon** longitude

**countryCode** two letter country code

**Source**

[http://openweathermap.org/help/city\\_list.txt](http://openweathermap.org/help/city_list.txt)

---

owm_layers	<i>List available owm layers.</i>
------------	-----------------------------------

---

**Description**

List available owm layers.

**Usage**

```
owm_layers()
```

**Value**

list of available owm layers

---

parse_columns	<i>Apply functions to columns.</i>
---------------	------------------------------------

---

**Description**

Apply functions to columns.

**Usage**

```
parse_columns(data, functions_)
```

**Arguments**

data	data frame
functions_	named list where keys correspond to column names

**Value**

updated data frame

**Examples**

```
## Not run:  
  parse_dt <- function(x){as.POSIXct(x, origin = "1970-01-01")}  
  forecast <- get_forecast("Kassel")$list  
  forecast %<>% parse_columns(list(dt = parse_dt))  
  
## End(Not run)
```

---

pipe	<i>Pipe operator.</i>
------	-----------------------

---

**Description**

exported from **magrittr**

---

remove_prefix	<i>Remove prefices from column names.</i>
---------------	---

---

**Description**

Remove prefices from column names.

**Usage**

```
remove_prefix(data, prefices, sep = ".")
```

**Arguments**

data	data frame
prefices	vector of prefices to be removed from column names
sep	prefix separator

**Value**

data frame with updated column names

**Examples**

```
x <- data.frame(main.temp = 1:10, sys.msg = "OK", cnt = 10:1)
names(x)
remove_prefix(x, c("main", "sys")) %>% names()
```

---

search_city_list	<i>Look up coordinates and city id in owm's city list.</i>
------------------	--

---

**Description**

search [owm\\_cities](#) dataset by city name and country code

**Usage**

```
search_city_list(city, country_code = "")
```

**Arguments**

city	city name (regex)
country_code	two letter country code (AU, DE, ...), use country_code = "" as wildcard

**Value**

data frame with matches

**See Also**

[owm\\_cities](#) dataset

**Examples**

```
search_city_list("London", "GB")
search_city_list("London")
search_city_list("Lond")
```

---

tidy_up	<i>Tidy up owm data.</i>
---------	--------------------------

---

**Description**

Calls [tidy\\_up\\_](#) passing data\$list as data argument.

**Usage**

```
tidy_up(data, ...)
```

**Arguments**

data	result returned from owm containing data frame in data\$list
...	see <a href="#">tidy_up_</a>

**Value**

data with updated data frame (data\$list)

**See Also**

[tidy\\_up\\_](#)

**Examples**

```
## Not run:  
get_forecast("London") %>% tidy_up()  
  
## End(Not run)
```

---

tidy_up_	<i>Tidy up owm data.</i>
----------	--------------------------

---

**Description**

Tidy up owm data.

**Usage**

```
tidy_up_(data, flatten_weather_ = TRUE, use_underscore_ = TRUE,  
         remove_prefix_ = c("main", "sys"))
```

**Arguments**

data	data frame
flatten_weather_	see <a href="#">flatten_weather</a>
use_underscore_	substitute dots in column names with underscores
remove_prefix_	prefices to be removed for shorter column names (remove_prefix_ = NULL will keep all prefices)

**Value**

updated data frame

**See Also**

[tidy\\_up](#),  
[remove\\_prefix](#),  
[use\\_underscore](#)

## Examples

```
## Not run:
result <- find_city("Malaga")
result$list %>% tidy_up_()

# keep dots in column names
result$list %>% tidy_up_(use_underscore_ = FALSE)

# keep all prefices
result$list %>% tidy_up_(remove_prefix_ = NULL)

## End(Not run)
```

---

use_underscore	<i>Substitute dots in column names with underscores.</i>
----------------	--

---

## Description

Substitute dots in column names with underscores.

## Usage

```
use_underscore(data)
```

## Arguments

data            data frame

## Value

data frame with updated column names

## Examples

```
names(airquality)
use_underscore(airquality) %>% names()
```

---

%\$\$\$%                      *Render operator.*

---

### Description

Vectorizes function [whisker.render](#).

NOTE: Because **whisker** does not support variable names including dots, a *dot* in column names is replaced by an *underscore*. Therefore, you must use an underscore in the template text for variables including dots.

### Usage

```
template %$$$% data
```

### Arguments

template	template
data	data frame where column names correspond to variables names in template

### Value

rendered template

### See Also

[whisker.render](#)

### Examples

```
vars <- data.frame(a = 1:3, b = 23:21)
"a = {{a}} and b = {{b}}" %$$$% vars
```
