

Package ‘shinyWidgets’

March 19, 2019

Title Custom Inputs Widgets for Shiny

Version 0.4.8

Description

Collection of custom input controls and user interface components for 'Shiny' applications.

Give your applications a unique and colorful style !

URL <https://github.com/dreamRs/shinyWidgets>

BugReports <https://github.com/dreamRs/shinyWidgets/issues>

Depends R (>= 3.1.0)

Imports shiny (>= 0.14), htmltools, jsonlite, grDevices, scales

License GPL-3 | file LICENSE

Encoding UTF-8

LazyData true

RoxygenNote 6.1.1

Suggests shinydashboard, viridisLite, RColorBrewer, testthat, covr,
shinydashboardPlus, bs4Dash, argonR, argonDash

NeedsCompilation no

Author Victor Perrier [aut, cre],

Fanny Meyer [aut],

actionBttn	<i>Awesome action button</i>
------------	------------------------------

Description

Like `actionButton` but awesome, via <https://btttn.surge.sh/>

Usage

```
actionBttn(inputId, label = NULL, icon = NULL, style = "unite",
           color = "default", size = "md", block = FALSE, no_outline = TRUE)
```

Arguments

<code>inputId</code>	The input slot that will be used to access the value.
<code>label</code>	The contents of the button, usually a text label.
<code>icon</code>	An optional icon to appear on the button.
<code>style</code>	Style of the button, to choose between simple, bordered, minimal, stretch, jelly, gradient, fill, material-circle, material-flat, pill, float, unite.
<code>color</code>	Color of the button : default, primary, warning, danger, success, royal.
<code>size</code>	Size of the button : xs,sm, md, lg.
<code>block</code>	Logical, full width button.
<code>no_outline</code>	Logical, don't show outline when navigating with keyboard/interact using mouse or touch.

[downloadBttn](#)

Examples

```
## Not run:
if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h2("Awesome action button"),
```

```
tags$br(),
actionBtn(
  inputId = "btt1",
  label = "Go!",
  color = "primary",
  style = "bordered"
),
tags$br(),
verbatimTextOutput(outputId = "res_btt1"),
tags$br(),
actionBtn(
  inputId = "btt2",
  label = "Go!",
  color = "success",
  style = "material-flat",
  icon = icon("sliders"),
  block = TRUE
),
tags$br(),
verbatimTextOutput(outputId = "res_btt2")
)

server <- function(input, output, session) {
  output$res_btt1 <- renderPrint(input$btt1)
  output$res_btt2 <- renderPrint(input$btt2)
}

shinyApp(ui = ui, server = server)

}

## End(Not run)
```

actionGroupButtons *Actions Buttons Group Inputs*

Description

Create a group of actions buttons.

Usage

```
actionGroupButtons(inputIds, labels, status = "default",
  size = "normal", direction = "horizontal", fullwidth = FALSE)
```

Arguments

inputIds The inputs slot that will be used to access the value, one for each button.

labels Labels for each buttons, must have same length as inputIds.

status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with status = 'myClass', buttons will have class btn-myClass.
size	Size of the buttons ('xs', 'sm', 'normal', 'lg').
direction	Horizontal or vertical.
fullwidth	If TRUE, fill the width of the parent div.

Value

An actions buttons group control that can be added to a UI definition.

Examples

```
## Not run:
if (interactive()) {
  library("shiny")
  library("shinyWidgets")

  ui <- fluidPage(
    br(),
    actionGroupButtons(
      inputIds = c("btn1", "btn2", "btn3"),
      labels = list("Action 1", "Action 2", tags$span(icon("gear"), "Action 3")),
      status = "primary"
    ),
    verbatimTextOutput(outputId = "res1"),
    verbatimTextOutput(outputId = "res2"),
    verbatimTextOutput(outputId = "res3")
  )

  server <- function(input, output, session) {

    output$res1 <- renderPrint(input$btn1)

    output$res2 <- renderPrint(input$btn2)

    output$res3 <- renderPrint(input$btn3)

  }

  shinyApp(ui = ui, server = server)
}

## End(Not run)
```

addSpinner	<i>Display a spinner above an output when this one recalculate</i>
------------	--------------------------------------------------------------------

Description

Display a spinner above an output when this one recalculate

Usage

```
addSpinner(output, spin = "double-bounce", color = "#112446")
```

Arguments

output	An output element, typically the result of renderPlot.
spin	Style of the spinner, choice between : circle, bounce, folding-cube, rotating-plane, cube-grid, fading-circle, double-bounce, dots, cube.
color	Color for the spinner.

Value

a list of tags

Note

The spinner don't disappear from the page, it's only masked by the plot, so the plot must have a non-transparent background. For a more robust way to insert loaders, see package "shinycssloaders".

Examples

```
# wrap an output:
addSpinner(shiny::plotOutput("plot"))

# Complete demo:

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h2("Exemple spinners"),
    actionButton(inputId = "refresh", label = "Refresh", width = "100%"),
    fluidRow(
      column(
        width = 5, offset = 1,
        addSpinner(plotOutput("plot1"), spin = "circle", color = "#E41A1C"),
        addSpinner(plotOutput("plot3"), spin = "bounce", color = "#377EB8"),
        addSpinner(plotOutput("plot5"), spin = "folding-cube", color = "#4DAF4A"),
        addSpinner(plotOutput("plot7"), spin = "rotating-plane", color = "#984EA3"),
```

```

    addSpinner(plotOutput("plot9"), spin = "cube-grid", color = "#FF7F00")
  ),
  column(
    width = 5,
    addSpinner(plotOutput("plot2"), spin = "fading-circle", color = "#FFF333"),
    addSpinner(plotOutput("plot4"), spin = "double-bounce", color = "#A65628"),
    addSpinner(plotOutput("plot6"), spin = "dots", color = "#F781BF"),
    addSpinner(plotOutput("plot8"), spin = "cube", color = "#999999")
  )
),
actionButton(inputId = "refresh2", label = "Refresh", width = "100%")
)

server <- function(input, output, session) {

  dat <- reactive({
    input$refresh
    input$refresh2
    Sys.sleep(3)
    Sys.time()
  })

  lapply(
    X = seq_len(9),
    FUN = function(i) {
      output[[paste0("plot", i)]] <- renderPlot({
        dat()
        plot(sin, -pi, i*pi)
      })
    }
  )
}

shinyApp(ui, server)
}

```

airDatepicker

Air Date Picker Input

Description

An alternative to dateInput to select single, multiple or date range. And two alias to select months or years.

Usage

```
airDatepickerInput(inputId, label = NULL, value = NULL,
```

```

multiple = FALSE, range = FALSE, timepicker = FALSE,
separator = " - ", placeholder = NULL, dateFormat = "yyyy-mm-dd",
minDate = NULL, maxDate = NULL, disabledDates = NULL,
view = c("days", "months", "years"), minView = c("days", "months",
"years"), monthsField = c("monthsShort", "months"),
clearButton = FALSE, todayButton = FALSE, autoClose = FALSE,
timepickerOpts = timepickerOptions(), position = NULL,
update_on = c("change", "close"), addon = c("right", "left", "none"),
language = "en", inline = FALSE, width = NULL)

timepickerOptions(dateTimeSeparator = NULL, timeFormat = NULL,
minHours = NULL, maxHours = NULL, minMinutes = NULL,
maxMinutes = NULL, hoursStep = NULL, minutesStep = NULL)

airMonthpickerInput(inputId, label = NULL, value = NULL, ...)

airYearpickerInput(inputId, label = NULL, value = NULL, ...)

```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value(s), dates as character string are accepted in yyyy-mm-dd format, or Date/POSIXct object. Can be a single value or several values.
multiple	Select multiple dates.
range	Select a date range.
timepicker	Add a timepicker below calendar to select time.
separator	Separator between dates when several are selected, default to " - ".
placeholder	A character string giving the user a hint as to what can be entered into the control.
dateFormat	Format to use to display date(s), default to "yyyy-mm-dd"
minDate	The minimum allowed date. Either a Date object, or a string in yyyy-mm-dd format.
maxDate	The maximum allowed date. Either a Date object, or a string in yyyy-mm-dd format.
disabledDates	A vector of dates to disable, e.g. won't be able to select one of dates passed.
view	Starting view, one of 'days' (default), 'months' or 'years'.
minView	Minimal view, one of 'days' (default), 'months' or 'years'.
monthsField	Names for the months when view is 'months', use 'monthsShort' for abbreviations or 'months' for full names.
clearButton	If TRUE, then button "Clear" will be visible.
todayButton	If TRUE, then button "Today" will be visible.
autoClose	If TRUE, then after date selection, datepicker will be closed.

timepickerOpts	Options for timepicker, see timepickerOptions .
position	Where calendar should appear, a two word string like 'bottom left' (default), or 'top right', 'left top'.
update_on	When to send selected value to server: on 'change' or when calendar is 'close'd.
addon	Display a calendar icon to 'right' or the 'left' of the widget, or 'none'. This icon act likes an <code>actionButton</code> , you can retrieve value server-side with <code>input\$<inputId>_button</code> .
language	Language to use, can be one of 'cs', 'da', 'de', 'en', 'es', 'fi', 'fr', 'hu', 'nl', 'pl', 'pt-BR', 'code'pt', 'ro', 'ru', 'sk', 'zh'.
inline	If TRUE, datepicker will always be visible.
width	The width of the input, e.g. '400px', or '100%'.
dateTimeSeparator	Separator between date and time, default to " ".
timeFormat	Desirable time format. You can use h (hours), hh (hours with leading zero), i (minutes), ii (minutes with leading zero), aa (day period - 'am' or 'pm'), AA (day period capitalized)
minHours	Minimal hours value, must be between 0 and 23. You will not be able to choose value lower than this.
maxHours	Maximum hours value, must be between 0 and 23. You will not be able to choose value higher than this.
minMinutes	Minimal minutes value, must be between 0 and 59. You will not be able to choose value lower than this.
maxMinutes	Maximum minutes value, must be between 0 and 59. You will not be able to choose value higher than this.
hoursStep	Hours step in slider.
minutesStep	Minutes step in slider.
...	Arguments passed to <code>airDatepickerInput</code> .

Value

a Date object or a POSIXct in UTC timezone.

Note

This widget prevents `dateInput` from working, don't use both !

See Also

See [updateAirDateInput](#) for updating slider value server-side. And [demoAirDatepicker](#) for examples.

Examples

```
## Not run:

if (interactive()) {

# examples of different options to select dates:
demoAirDatepicker("datepicker")

# select month(s)
demoAirDatepicker("months")

# select year(s)
demoAirDatepicker("years")

# select date and time
demoAirDatepicker("timepicker")

# You can select multiple dates :
library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  airDatepickerInput(
    inputId = "multiple",
    label = "Select multiple dates:",
    placeholder = "You can pick 5 dates",
    multiple = 5, clearButton = TRUE
  ),
  verbatimTextOutput("res")
)

server <- function(input, output, session) {
  output$res <- renderPrint(input$multiple)
}

shinyApp(ui, server)

}

## End(Not run)
```

animateOptions

Animate options

Description

Animate options

Usage

```
animateOptions(enter = "fadeInDown", exit = "fadeOutUp",
  duration = 1)
```

Arguments

enter	Animation name on appearance
exit	Animation name on disappearance
duration	Duration of the animation

Value

a list

See Also

[animations](#)

Examples

```
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  dropdown(
    "Your contents goes here ! You can pass several elements",
    circle = TRUE, status = "danger", icon = icon("gear"), width = "300px",
    animate = animateOptions(enter = "fadeInDown", exit = "fadeOutUp", duration = 3)
  )

}

## End(Not run)
```

animations

Animation names

Description

List of all animations by categories

Usage

```
animations
```

Format

A list of lists

Source

<https://github.com/daneden/animate.css/blob/master/animate-config.json>

appendVerticalTab *Mutate Vertical Tabset Panel*

Description

Mutate Vertical Tabset Panel

Usage

```
appendVerticalTab(inputId, tab,
  session = shiny::getDefaultReactiveDomain())

removeVerticalTab(inputId, index,
  session = shiny::getDefaultReactiveDomain())

reorderVerticalTabs(inputId, newOrder,
  session = shiny::getDefaultReactiveDomain())
```

Arguments

inputId	The id of the verticalTabsetPanel object.
tab	The verticalTab to append.
session	The session object passed to function given to shinyServer.
index	The index of the the tab to remove.
newOrder	The new index order.

Examples

```
if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(

    verticalTabsetPanel(
      verticalTabPanel("blaa", "foo"),
      verticalTabPanel("yarp", "bar"),
      id="hippi"
    )
  )

  server <- function(input, output, session) {
    appendVerticalTab("hippi", verticalTabPanel("bipi", "long"))
    removeVerticalTab("hippi", 1)
  }
}
```

```

    appendVerticalTab("hippi", verticalTabPanel("howdy","fair"))
    reorderVerticalTabs("hippi", c(3,2,1))
  }

  # Run the application
  shinyApp(ui = ui, server = server)
}

```

awesomeCheckbox

Awesome Checkbox Input Control

Description

Create a Font Awesome Bootstrap checkbox that can be used to specify logical values.

Usage

```

awesomeCheckbox(inputId, label, value = FALSE, status = "primary",
  width = NULL)

```

Arguments

inputId	The input slot that will be used to access the value.
label	Input label.
value	Initial value (TRUE or FALSE).
status	Color of the buttons, a valid Bootstrap status : default, primary, info, success, warning, danger.
width	The width of the input

Value

A checkbox control that can be added to a UI definition.

See Also

[updateAwesomeCheckbox](#)

Examples

```

## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  ui <- fluidPage(
    awesomeCheckbox(inputId = "somevalue",
      label = "A single checkbox",
      value = TRUE,
      status = "danger"),

```

```
    verbatimTextOutput("value")
  )
  server <- function(input, output) {
    output$value <- renderText({ input$somevalue })
  }
  shinyApp(ui, server)
}

## End(Not run)
```

awesomeCheckboxGroup *Awesome Checkbox Group Input Control*

Description

Create a Font Awesome Bootstrap checkbox that can be used to specify logical values.

Usage

```
awesomeCheckboxGroup(inputId, label, choices, selected = NULL,
  inline = FALSE, status = "primary", width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Input label.
choices	List of values to show checkboxes for.
selected	The values that should be initially selected, if any.
inline	If TRUE, render the choices inline (i.e. horizontally)
status	Color of the buttons
width	The width of the input

Value

A checkbox control that can be added to a UI definition.

See Also

[updateAwesomeCheckboxGroup](#)

Examples

```
## Not run:
if (interactive()) {

  ui <- fluidPage(
    br(),
    awesomeCheckboxGroup(
      inputId = "id1", label = "Make a choice:",
      choices = c("graphics", "ggplot2")
    ),
    verbatimTextOutput(outputId = "res1"),
    br(),
    awesomeCheckboxGroup(
      inputId = "id2", label = "Make a choice:",
      choices = c("base", "dplyr", "data.table"),
      inline = TRUE, status = "danger"
    ),
    verbatimTextOutput(outputId = "res2")
  )

  server <- function(input, output, session) {

    output$res1 <- renderPrint({
      input$id1
    })

    output$res2 <- renderPrint({
      input$id2
    })

  }

  shinyApp(ui = ui, server = server)

}

## End(Not run)
```

Description

Create a set of prettier radio buttons used to select an item from a list.

Usage

```
awesomeRadio(inputId, label, choices, selected = NULL, inline = FALSE,
             status = "primary", checkbox = FALSE, width = NULL)
```

Arguments

<code>inputId</code>	The input slot that will be used to access the value.
<code>label</code>	Display label for the control, or <code>NULL</code> for no label.
<code>choices</code>	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user)
<code>selected</code>	The initially selected value (if not specified then defaults to the first value).
<code>inline</code>	If <code>TRUE</code> , render the choices inline (i.e. horizontally).
<code>status</code>	Color of the buttons, a valid Bootstrap status : default, primary, info, success, warning, danger.
<code>checkbox</code>	Logical, render radio like checkboxes (with a square shape).
<code>width</code>	The width of the input, e.g. 400px, or 100%.

Value

A set of radio buttons that can be added to a UI definition.

shinyApp(ui = ui, server = server)

}

## End(Not run)

```

checkboxGroupButtons *Buttons Group checkbox Input Control*

Description

Create buttons grouped that act like checkboxes.

Usage

```
checkboxGroupButtons(inputId, label = NULL, choices = NULL,
  selected = NULL, status = "default", size = "normal",
  direction = "horizontal", justified = FALSE, individual = FALSE,
  checkIcon = list(), width = NULL, choiceNames = NULL,
  choiceValues = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Input label.
choices	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user)
selected	The initially selected value.
status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with status = 'myClass', buttons will have class btn-myClass.
size	Size of the buttons ('xs', 'sm', 'normal', 'lg')
direction	Horizontal or vertical.
justified	If TRUE, fill the width of the parent div.

individual If TRUE, buttons are separated.
checkIcon A list, if no empty must contain at least one element named 'yes' corresponding to an icon to display if the button is checked.
width The width of the input, e.g. '400px', or '100%'.
choiceNames, choiceValues Same as in [checkboxGroupInput](#). List of names and values, respectively, that are displayed to the user in the app and correspond to the each choice (for this reason, choiceNames and choiceValues must have the same length).

Value

A buttons group control that can be added to a UI definition.

See Also

[updateCheckboxGroupButtons](#)

Examples

```
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  ui <- fluidPage(
    checkboxGroupButtons(inputId = "somevalue",
                        label = "Make a choice: ",
                        choices = c("A", "B", "C")),
    verbatimTextOutput("value")
  )
  server <- function(input, output) {
    output$value <- renderText({ input$somevalue })
  }
  shinyApp(ui, server)
}

## End(Not run)
```

chooseSliderSkin *Theme selector for sliderInput*

Description

Customize the appearance of the original shiny's sliderInput

Usage

```
chooseSliderSkin(skin = c("Shiny", "Flat", "Modern", "Nice", "Simple",
  "HTML5", "Round", "Square"), color = NULL)
```

Arguments

skin	The skin to apply. Choose among 5 different flavors, namely 'Shiny', 'Flat', 'Modern', 'Nice', 'Simple', 'HTML5', 'Round' and 'Square'.
color	A color to apply to all sliders. Works with following skins: 'Shiny', 'Flat', 'Modern', 'HTML5'. For 'Flat' a CSS filter is applied, desired color maybe a little offset.

Note

It is not currently possible to apply multiple themes at the same time.

See Also

See [setSliderColor](#) to update the color of your sliderInput.

Examples

```
## Not run:

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  # With Modern design

  ui <- fluidPage(
    chooseSliderSkin("Modern"),
    sliderInput("obs", "Customized single slider:",
               min = 0, max = 100, value = 50
    ),
    sliderInput("obs2", "Customized range slider:",
               min = 0, max = 100, value = c(40, 80)
    ),
    plotOutput("distPlot")
  )

  server <- function(input, output) {

    output$distPlot <- renderPlot({
      hist(rnorm(input$obs))
    })

  }

  shinyApp(ui, server)

  # Use Flat design & a custom color
```

```

ui <- fluidPage(
  chooseSliderSkin("Flat", color = "#112446"),
  sliderInput("obs", "Customized single slider:",
             min = 0, max = 100, value = 50
  ),
  sliderInput("obs2", "Customized range slider:",
             min = 0, max = 100, value = c(40, 80)
  ),
  sliderInput("obs3", "An other slider:",
             min = 0, max = 100, value = 50
  ),
  plotOutput("distPlot")
)

server <- function(input, output) {

  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)

}

## End(Not run)

```

circleButton

Circle Action button

Description

Create a rounded action button.

Usage

```
circleButton(inputId, icon = NULL, status = "default",
            size = "default", ...)
```

Arguments

inputId	The input slot that will be used to access the value.
icon	An icon to appear on the button.
status	Color of the button.
size	Size of the button : default, lg, sm, xs.
...	Named attributes to be applied to the button.

closeSweetAlert	<i>Close Sweet Alert</i>
-----------------	--------------------------

Description

Close Sweet Alert

Usage

```
closeSweetAlert(session)
```

Arguments

session	The session object passed to function given to shinyServer.
---------	-------------------------------------------------------------

colorSelectorInput	<i>Color Selector Input</i>
--------------------	-----------------------------

Description

Choose between a restrictive set of colors.

Usage

```
colorSelectorInput(inputId, label, choices, selected = NULL,
  mode = c("radio", "checkbox"), display_label = FALSE, ncol = 10)
```

```
colorSelectorExample()
```

```
colorSelectorDrop(inputId, label, choices, selected = NULL,
  display_label = FALSE, ncol = 10, circle = TRUE, size = "sm",
  up = FALSE, width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
choices	A list of colors, can be a list of named list, see example.
selected	Default selected color, if NULL the first color for mode = 'radio' and none for mode = 'checkbox'
mode	'radio' for only one choice, 'checkbox' for selecting multiple values.
display_label	Display list's names after palette of color.
ncol	If choices is not a list but a vector, go to line after n elements.
circle	Logical, use a circle or a square button

size	Size of the button : default, lg, sm, xs.
up	Logical. Display the dropdown menu above.
width	Width of the dropdown menu content.

Functions

- colorSelectorExample: Examples of use for colorSelectorInput
- colorSelectorDrop: Display a colorSelector in a dropdown button

Examples

```

if (interactive()) {

# Full example
colorSelectorExample()

# Simple example
ui <- fluidPage(
  colorSelectorInput(
    inputId = "mycolor1", label = "Pick a color :",
    choices = c("steelblue", "cornflowerblue",
               "firebrick", "palegoldenrod",
               "forestgreen")
  ),
  verbatimTextOutput("result1")
)

server <- function(input, output, session) {
  output$result1 <- renderPrint({
    input$mycolor1
  })
}

shinyApp(ui = ui, server = server)

}

```

confirmSweetAlert *Launch a confirmation dialog*

Description

Launch a popup to ask confirmation to the user

Usage

```

confirmSweetAlert(session, inputId, title = NULL, text = NULL,
  type = NULL, danger_mode = FALSE, btn_labels = c("Cancel",
  "Confirm"), closeOnClickOutside = FALSE, html = FALSE)

```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The input slot that will be used to access the value.
title	Title of the alert.
text	Text of the alert, can contains HTML tags.
type	Type of the alert : info, success, warning or error.
danger_mode	Logical, activate danger mode (focus on cancel button).
btn_labels	Labels for buttons.
closeOnClickOutside	Decide whether the user should be able to dismiss the modal by clicking outside of it, or not.
html	Does text contains HTML tags ?

Description

An example showing how numericRangeInput works

Usage

```
demoNumericRange()
```

Examples

```
## Not run:  
  
if (interactive()) {  
  
  demoNumericRange()  
  
}  
  
## End(Not run)
```

downloadBttn *Create a download [actionBttn](#)*

Description

Create a download button with [actionBttn](#).

Usage

```
downloadBttn(outputId, label = "Download", style = "unite",  
  color = "default", size = "md", block = FALSE, no_outline = TRUE)
```

Arguments

outputId	The name of the output slot that the downloadHandler is assigned to.
label	The label that should appear on the button.
style	Style of the button, to choose between simple, bordered, minimal, stretch, jelly, gradient, fill, material-circle, material-flat, pill, float, unite.
color	Color of the button : default, primary, warning, danger, success, royal.
size	Size of the button : xs,sm, md, lg.
block	Logical, full width button.
no_outline	Logical, don't show outline when navigating with keyboard/interact using mouse or touch.

Examples

```
## Not run:

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    tags$h2("Download bttn"),
    downloadBttn(
      outputId = "downloadData",
      style = "bordered",
      color = "primary"
    )
  )

  server <- function(input, output, session) {

    output$downloadData <- downloadHandler(
      filename = function() {
        paste('data-', Sys.Date(), '.csv', sep='')
      },
      content = function(con) {
        write.csv(mtcars, con)
      }
    )

  }

  shinyApp(ui, server)

}

## End(Not run)
```

dropdown

*Dropdown***Description**

Create a dropdown menu

Usage

```
dropdown(..., style = "default", status = "default", size = "md",
  icon = NULL, label = NULL, tooltip = FALSE, right = FALSE,
  up = FALSE, width = NULL, animate = FALSE, inputId = NULL)
```

Arguments

...	List of tag to be displayed into the dropdown menu.
style	Character. if default use Bootstrap button (like an <code>actionButton</code>), else use an actionBtn , see argument style (in actionBtn documentation) for possible values.
status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with <code>status = 'myClass'</code> , buttons will have class <code>btn-myClass</code> .
size	Size of the button : default, lg, sm, xs.
icon	An icon to appear on the button.
label	Label to appear on the button. If <code>circle = TRUE</code> and <code>tooltip = TRUE</code> , label is used in tooltip.
tooltip	Put a tooltip on the button, you can customize tooltip with <code>tooltipOptions</code> .
right	Logical. The dropdown menu starts on the right.
up	Logical. Display the dropdown menu above.
width	Width of the dropdown menu content.
animate	Add animation on the dropdown, can be logical or result of <code>animateOptions</code> .
inputId	Optional, id for the button, the button act like an <code>actionButton</code> , and you can use the id to toggle the dropdown menu server-side.

Details

This function is similar to `dropdownButton` but don't use Bootstrap, so you can put `pickerInput` in it. Moreover you can add animations on the appearance / disappearance of the dropdown with `animate.css`.

See Also

[animateOptions](#) for animation, [tooltipOptions](#) for tooltip and [actionBtn](#) for the button.

Examples

```

## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  library("shiny")
  library("shinyWidgets")

  ui <- fluidPage(
    tags$h2("pickerInput in dropdown"),
    br(),
    dropdown(

      tags$h3("List of Input"),

      pickerInput(inputId = 'xcol2',
                  label = 'X Variable',
                  choices = names(iris),
                  options = list(`style` = "btn-info")),

      pickerInput(inputId = 'ycol2',
                  label = 'Y Variable',
                  choices = names(iris),
                  selected = names(iris)[[2]],
                  options = list(`style` = "btn-warning")),

      sliderInput(inputId = 'clusters2',
                  label = 'Cluster count',
                  value = 3,
                  min = 1, max = 9),

      style = "unite", icon = icon("gear"),
      status = "danger", width = "300px",
      animate = animateOptions(
        enter = animations$fading_entrances$fadeInLeftBig,
        exit = animations$fading_exits$fadeOutRightBig
      )
    ),
    plotOutput(outputId = 'plot2')
  )

  server <- function(input, output, session) {

    selectedData2 <- reactive({
      iris[, c(input$xcol2, input$ycol2)]
    })

    clusters2 <- reactive({
      kmeans(selectedData2(), input$clusters2)
    })
  }
}

```

```

output$plot2 <- renderPlot({
  palette(c("#E41A1C", "#377EB8", "#4DAF4A",
           "#984EA3", "#FF7F00", "#FFFF33",
           "#A65628", "#F781BF", "#999999"))

  par(mar = c(5.1, 4.1, 0, 1))
  plot(selectedData2(),
        col = clusters2()$cluster,
        pch = 20, cex = 3)
  points(clusters2()$centers, pch = 4, cex = 4, lwd = 4)
})

}

shinyApp(ui = ui, server = server)

}

## End(Not run)

```

dropdownButton

Dropdown Button

Description

Create a dropdown menu with Bootstrap where you can put input elements.

Usage

```

dropdownButton(..., circle = TRUE, status = "default",
  size = "default", icon = NULL, label = NULL, tooltip = FALSE,
  right = FALSE, up = FALSE, width = NULL, margin = "10px",
  inputId = NULL)

```

Arguments

...	List of tag to be displayed into the dropdown menu.
circle	Logical. Use a circle button
status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with status = 'myClass', buttons will have class btn-myClass.
size	Size of the button : default, lg, sm, xs.
icon	An icon to appear on the button.
label	Label to appear on the button. If circle = TRUE and tooltip = TRUE, label is used in tooltip.
tooltip	Put a tooltip on the button, you can customize tooltip with tooltipOptions.
right	Logical. The dropdown menu starts on the right.

up	Logical. Display the dropdown menu above.
width	Width of the dropdown menu content.
margin	Value of the dropdown margin-right and margin-left menu content.
inputId	Optional, id for the button, the button act like an <code>actionButton</code> , and you can use the id to toggle the dropdown menu server-side with <code>toggleDropdownButton</code> .

Details

It is possible to know if a dropdown is open or closed server-side with `input$<inputId>_state`.

Note

`pickerInput` doesn't work inside `dropdownButton` because that's also a dropdown and you can't nest them. Instead use `dropdown`, it has similar features but is built differently so it works.

Examples

```
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    dropdownButton(
      inputId = "mydropdown",
      label = "Controls",
      icon = icon("sliders"),
      status = "primary",
      circle = FALSE,
      sliderInput(
        inputId = "n",
        label = "Number of observations",
        min = 10, max = 100, value = 30
      ),
      prettyToggle(
        inputId = "na",
        label_on = "NAs kept",
        label_off = "NAs removed",
        icon_on = icon("check"),
        icon_off = icon("remove")
      )
    ),
    tags$div(style = "height: 140px;"), # spacing
    verbatimTextOutput(outputId = "out"),
    verbatimTextOutput(outputId = "state")
  )

  server <- function(input, output, session) {
```

```
output$out <- renderPrint({
  cat(
    " # n\n", input$n, "\n",
    "# na\n", input$na
  )
})

output$state <- renderPrint({
  cat("Open:", input$mydropdown_state)
})

}

shinyApp(ui, server)

}

## End(Not run)
```

inputSweetAlert *Launch an input text dialog*

Description

Launch a popup with a text input

Usage

```
inputSweetAlert(session, inputId, title = NULL, text = NULL,
  type = NULL, btn_labels = "Ok", placeholder = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The input slot that will be used to access the value.
title	Title of the alert.
text	Text of the alert.
type	Type of the alert : info, success, warning or error.
btn_labels	Labels for button(s).
placeholder	A character string giving the user a hint as to what can be entered into the control.

See Also

Examples

```
## Not run:

if (interactive()) {

  library("shiny")
  library("shinyWidgets")

  ui <- fluidPage(
    tags$h1("Confirm sweet alert"),
    actionButton(inputId = "go", label = "Launch input text dialog"),
    verbatimTextOutput(outputId = "res")
  )
  server <- function(input, output, session) {

    observeEvent(input$go, {
      inputSweetAlert(
        session = session, inputId = "mytext",
        title = "What's your name ?"
      )
    })

    output$res <- renderPrint(input$mytext)

  }

  shinyApp(ui = ui, server = server)

}

## End(Not run)
```

knobInput

Knob Input

Description

Knob Input

Usage

```
knobInput(inputId, label, value, min = 0, max = 100, step = 1,
  angleOffset = 0, angleArc = 360, cursor = FALSE,
  thickness = NULL, lineCap = c("default", "round"),
  displayInput = TRUE, displayPrevious = FALSE,
  rotation = c("clockwise", "anticlockwise"), fgColor = NULL,
  inputColor = NULL, bgColor = NULL, readOnly = FALSE, skin = NULL,
  width = NULL, height = NULL, immediate = TRUE)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value.
min	Minimum allowed value, default to 0.
max	Maximum allowed value, default to 100.
step	Specifies the interval between each selectable value, default to 1.
angleOffset	Starting angle in degrees, default to 0.
angleArc	Arc size in degrees, default to 360.
cursor	Display mode "cursor", don't work properly if width is not set in pixel, (TRUE or FALSE).
thickness	Gauge thickness, numeric value.
lineCap	Gauge stroke endings, 'default' or 'round'.
displayInput	Hide input in the middle of the knob (TRUE or FALSE).
displayPrevious	Display the previous value with transparency (TRUE or FALSE).
rotation	Direction of progression, 'clockwise' or 'anticlockwise'.
fgColor	Foreground color.
inputColor	Input value (number) color.
bgColor	Background color.
readOnly	Disable knob (TRUE or FALSE).
skin	Change Knob skin, only one option available : 'tron'.
width	The width of the input, e.g. 400px, or 100%.
height	The height of the input, e.g. 400px, or 100%.
immediate	If TRUE (default), server-side value is updated each time value change, if FALSE value is updated when user release the widget.

Value

Numeric value server-side.

See Also

[updateKnobInput](#) for updating the value server-side.

Examples

```
## Not run:

if (interactive()) {

  library("shiny")
  library("shinyWidgets")
}
```

```

ui <- fluidPage(
  knobInput(
    inputId = "myKnob",
    label = "Display previous:",
    value = 50,
    min = -100,
    displayPrevious = TRUE,
    fgColor = "#428BCA",
    inputColor = "#428BCA"
  ),
  verbatimTextOutput(outputId = "res")
)

server <- function(input, output, session) {

  output$res <- renderPrint(input$myKnob)

}

shinyApp(ui = ui, server = server)

}

## End(Not run)

```

materialSwitch

Material Design Switch Input Control

Description

A toggle switch to turn a selection on or off.

Usage

```
materialSwitch(inputId, label = NULL, value = FALSE,
  status = "default", right = FALSE, inline = FALSE, width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Input label.
value	TRUE or FALSE.
status	Color, must be a valid Bootstrap status : default, primary, info, success, warning, danger.
right	Should the the label be on the right? default to FALSE.
inline	Display the input inline, if you want to place buttons next to each other.
width	The width of the input, e.g. '400px', or '100%'.

Value

A switch control that can be added to a UI definition.

See Also

[updateMaterialSwitch](#), [switchInput](#)

Examples

```
materialSwitch(inputId = "somevalue", label = "")
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  ui <- fluidPage(
    materialSwitch(inputId = "somevalue", label = ""),
    verbatimTextOutput("value")
  )
  server <- function(input, output) {
    output$value <- renderText({ input$somevalue })
  }
  shinyApp(ui, server)
}

## End(Not run)
```

multiInput

Create a multiselect input control

Description

A user-friendly replacement for select boxes with the multiple attribute

Usage

```
multiInput(inputId, label, choices = NULL, selected = NULL,
  options = NULL, width = NULL, choiceNames = NULL,
  choiceValues = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
choices	List of values to select from.
selected	The initially selected value.

options	List of options passed to multi (enable_search = FALSE for disabling the search bar for example).
width	The width of the input, e.g. 400px, or 100%.
choiceNames	List of names to display to the user.
choiceValues	List of values corresponding to choiceNames.

Value

A multiselect control

See Also

[updateMultiInput](#) to update value server-side.

Examples

```
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  library("shiny")
  library("shinyWidgets")

  # simple use

  ui <- fluidPage(
    multiInput(
      inputId = "id", label = "Fruits :",
      choices = c("Banana", "Blueberry", "Cherry",
                  "Coconut", "Grapefruit", "Kiwi",
                  "Lemon", "Lime", "Mango", "Orange",
                  "Papaya"),
      selected = "Banana", width = "350px"
    ),
    verbatimTextOutput(outputId = "res")
  )

  server <- function(input, output, session) {

      input$id
    })
  }

  shinyApp(ui = ui, server = server)

  # with options

  ui <- fluidPage(
    multiInput(
```

```

inputId = "id", label = "Fruits :",
choices = c("Banana", "Blueberry", "Cherry",
            "Coconut", "Grapefruit", "Kiwi",
            "Lemon", "Lime", "Mango", "Orange",
            "Papaya"),
selected = "Banana", width = "400px",
options = list(
  enable_search = FALSE,
  non_selected_header = "Choose between:",
  selected_header = "You have selected:"
)
),
verbatimTextOutput(outputId = "res")
)

server <- function(input, output, session) {
  output$res <- renderPrint({
    input$id
  })
}

shinyApp(ui = ui, server = server)

}

## End(Not run)

```

noUiSliderInput

Numeric range slider

Description

A minimal numeric range slider with a lot of features.

Usage

```

noUiSliderInput(inputId, label = NULL, min, max, value, step = NULL,
  tooltips = TRUE, connect = TRUE, padding = 0, margin = NULL,
  limit = NULL, orientation = c("horizontal", "vertical"),
  direction = c("ltr", "rtl"), behaviour = "tap", range = NULL,
  pips = NULL, format = wNumbFormat(), update_on = c("end",
  "change"), color = NULL, inline = FALSE, width = NULL,
  height = NULL)

```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
min	Minimal value that can be selected.

max	Maximal value that can be selected.
value	The initial value of the slider. as many cursors will be created as values provided.
step	numeric, by default, the slider slides fluently. In order to make the handles jump between intervals, you can use the step option.
tooltips	logical, display slider's value in a tooltip above slider.
connect	logical, vector of length value + 1, color slider between handle(s).
padding	numeric, padding limits how close to the slider edges handles can be.
margin	numeric, when using two handles, the minimum distance between the handles can be set using the margin option.
limit	numeric, the limit option is the opposite of the margin option, limiting the maximum distance between two handles.
orientation	The orientation setting can be used to set the slider to "vertical" or "horizontal".
direction	"ltr" or "rtl", By default the sliders are top-to-bottom and left-to-right, but you can change this using the direction option, which decides where the upper side of the slider is.
behaviour	Option to handle user interaction, a value or several between "drag", "tap", "fixed", "snap" or "none". See https://refreshless.com/nouislider/behaviour-option/ for more examples.
range	list, can be used to define non-linear sliders.
pips	list, used to generate points along the slider.
format	numbers format, see wNumbFormat .
update_on	When to send value to server: "end" (when slider is released) or "update" (each time value changes).
color	color in Hex format for the slider.
inline	If TRUE, it's possible to position sliders side-by-side.
width	The width of the input, e.g. 400px, or 100%.
height	The height of the input, e.g. 400px, or 100%.

Value

a ui definition

Note

See [updateNoUiSliderInput](#) for updating slider value server-side. And [demoNoUiSlider](#) for examples.

Examples

```
## Not run:

if (interactive()) {

### examples ----
```

```

# see ?demoNoUiSlider
demoNoUiSlider("more")

### basic usage ----

library( shiny )
library( shinyWidgets )

ui <- fluidPage(

  tags$br(),

  noUiSliderInput(
    inputId = "noui1",
    min = 0, max = 100,
    value = 20
  ),
  verbatimTextOutput(outputId = "res1"),

  tags$br(),

  noUiSliderInput(
    inputId = "noui2", label = "Slider vertical:",
    min = 0, max = 1000, step = 50,
    value = c(100, 400), margin = 100,
    orientation = "vertical",
    width = "100px", height = "300px"
  ),
  verbatimTextOutput(outputId = "res2")

)

server <- function(input, output, session) {

  output$res1 <- renderPrint(input$noui1)
  output$res2 <- renderPrint(input$noui2)

}

shinyApp(ui, server)

}

## End(Not run)

```

Description

Create an input group of numeric inputs that function as a range input.

Usage

```
numericRangeInput(inputId, label, value, width = NULL,  
  separator = " to ")
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	The initial value(s) for the range. A numeric vector of length one will be duplicated to represent the minimum and maximum of the range; a numeric vector of two or more will have its minimum and maximum set the minimum and maximum of the range.
width	The width of the input, e.g. '400px', or '100%'; see validateCssUnit .
separator	String to display between the start and end input boxes.

Examples

```
## Not run:  
  
if (interactive()) {  
  
  ### examples ----  
  
  # see ?demoNumericRange  
  demoNumericRange()  
  
  ### basic usage ----  
  
  library( shiny )  
  library( shinyWidgets )  
  
  ui <- fluidPage(  
  
    tags$br(),  
  
    numericRangeInput(  
      inputId = "noui1", label = "Numeric Range Input:",  
      value = c(100, 400)  
    ),  
    verbatimTextOutput(outputId = "res1")  
  
  )  
  
  server <- function(input, output, session) {
```

```
    output$res1 <- renderPrint(input$noui1)
  }
  shinyApp(ui, server)
}

## End(Not run)
```

panel

Create a panel

Description

Create a panel (box) with basic border and padding, you can use Bootstrap status to style the panel, see <http://getbootstrap.com/components/#panels>.

Usage

```
panel(..., heading = NULL, footer = NULL, status = "default")
```

Arguments

...	UI elements to include inside the panel.
heading	Title for the panel in a plain header.
footer	Footer for the panel.
status	Bootstrap status for contextual alternative.

Value

A UI definition.

Examples

```
## Not run:

if (interactive()) {
  library("shiny")
  library("shinyWidgets")

  ui <- fluidPage(

    # Default
    panel(
```

```

      "Content goes here",
      checkboxInput(inputId = "id1", label = "Label")
    ),

    # With header and footer
    panel(
      "Content goes here",
      checkboxInput(inputId = "id2", label = "Label"),
      heading = "My title",
      footer = "Something"
    ),

    # With status
    panel(
      "Content goes here",
      checkboxInput(inputId = "id3", label = "Label"),
      heading = "My title",
      status = "primary"
    )
  )
}

server <- function(input, output, session) {

}

shinyApp(ui = ui, server = server)
}

## End(Not run)

```

pickerGroup-module *Picker Group*

Description

Group of mutually dependent [pickerInput](#) for filtering data.frame's columns.

Usage

```
pickerGroupUI(id, params, label = NULL, btn_label = "Reset filters",
  options = list())
```

```
pickerGroupServer(input, output, session, data, vars)
```

Arguments

id	Module's id.
params	A named list of parameters passed to each pickerInput , you can use : 'inputId' (obligatory, must be variable name), 'label', 'placeholder'.

label	Character, global label on top of all labels.
btn_label	Character, reset button label.
options	See pickerInput options argument.
input	standard shiny input.
output	standard shiny output.
session	standard shiny session.
data	a data.frame, or an object that can be coerced to data.frame.
vars	character, columns to use to create filters, must correspond to variables listed in params.

Value

a reactive function containing data filtered.

Examples

```
## Not run:

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  data("mpg", package = "ggplot2")

  ui <- fluidPage(
    fluidRow(
      column(
        width = 10, offset = 1,
        tags$h3("Filter data with picker group"),
        panel(
          pickerGroupUI(
            id = "my-filters",
            params = list(
              manufacturer = list(inputId = "manufacturer", title = "Manufacturer:"),
              model = list(inputId = "model", title = "Model:"),
              trans = list(inputId = "trans", title = "Trans:"),
              class = list(inputId = "class", title = "Class:")
            )
          ), status = "primary"
        ),
      ),
      dataTableOutput(outputId = "table")
    )
  )

  server <- function(input, output, session) {
    res_mod <- callModule(
```

```

    module = pickerGroupServer,
    id = "my-filters",
    data = mpg,
    vars = c("manufacturer", "model", "trans", "class")
  )
  output$table <- renderDataTable(res_mod())
}

shinyApp(ui, server)

}

## End(Not run)

```

pickerInput

Select picker Input Control

Description

Create a select picker (<https://developer.snapappointments.com/bootstrap-select/>)

Usage

```

pickerInput(inputId, label = NULL, choices, selected = NULL,
  multiple = FALSE, options = list(), choicesOpt = NULL,
  width = NULL, inline = FALSE)

```

Arguments

inputId	The input slot that will be used to access the value.
label	Display a text in the center of the switch.
choices	List of values to select from. If elements of the list are named then that name rather than the value is displayed to the user.
selected	The initially selected value (or multiple values if multiple = TRUE). If not specified then defaults to the first value for single-select lists and no values for multiple select lists.
multiple	Is selection of multiple items allowed?
options	List of options, see pickerOptions for all available options. For limit the number of selections, see example below.
choicesOpt	Options for choices in the dropdown menu.
width	The width of the input : 'auto', 'fit', '100px', '75%'.
inline	Put the label and the picker on the same line.

Value

A select control that can be added to a UI definition.

See Also

[updatePickerInput](#) to update value server-side.

Examples

```
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

# You can run the gallery to see other examples
shinyWidgetsGallery()

# Simple example
library("shiny")
ui <- fluidPage(
  pickerInput(inputId = "somevalue", label = "A label", choices = c("a", "b")),
  verbatimTextOutput("value")
)
server <- function(input, output) {
  output$value <- renderPrint({ input$somevalue })
}
shinyApp(ui, server)

### Add actions box for selecting
# deselecting all options

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  br(),
  pickerInput(
    inputId = "p1",
    label = "Select all option",

    inputId = "classic",
    label = "Select max two option below:",
    choices = c("A", "B", "C", "D"),

```

```

    multiple = TRUE,
    options = list(
      "max-options" = 2,
      "max-options-text" = "No more!"
    )
  ),
  verbatimTextOutput(outputId = "res_classic")
)
server <- function(input, output) {
  output$res_grp <- renderPrint(input$groups)
  output$res_grp_2 <- renderPrint(input$groups_2)
  output$res_classic <- renderPrint(input$classic)
}
shinyApp(ui, server)

}

## End(Not run)

```

pickerOptions

Options for 'pickerInput'

Description

Wrapper of options available here: <https://developer.snapappointments.com/bootstrap-select/options/>

Usage

```

pickerOptions(actionsBox = NULL, container = NULL,
  countSelectedText = NULL, deselectAllText = NULL,
  dropdownAlignRight = NULL, dropupAuto = NULL, header = NULL,
  hideDisabled = NULL, iconBase = NULL, liveSearch = NULL,
  liveSearchNormalize = NULL, liveSearchPlaceholder = NULL,
  liveSearchStyle = NULL, maxOptions = NULL, maxOptionsText = NULL,
  mobile = NULL, multipleSeparator = NULL, noneSelectedText = NULL,
  noneResultsText = NULL, selectAllText = NULL,
  selectedTextFormat = NULL, selectOnTab = NULL, showContent = NULL,
  showIcon = NULL, showSubtext = NULL, showTick = NULL,
  size = NULL, style = NULL, tickIcon = NULL, title = NULL,
  virtualScroll = NULL, width = NULL, windowPadding = NULL)

```

Arguments

actionsBox	When set to true, adds two buttons to the top of the dropdown menu (Select All & Deselect All). Type: boolean; Default: false.
container	When set to a string, appends the select to a specific element or selector, e.g., container: 'body' '.main-body' Type: string false; Default: false.

<code>countSelectedText</code>	Sets the format for the text displayed when <code>selectedTextFormat</code> is <code>count</code> or <code>count > #</code> . 0 is the selected amount. 1 is total available for selection. When set to a function, the first parameter is the number of selected options, and the second is the total number of options. The function must return a string. Type: <code>string function</code> ; Default: <code>function</code> .
<code>deselectAllText</code>	The text on the button that deselects all options when <code>actionsBox</code> is enabled. Type: <code>string</code> ; Default: <code>'Deselect All'</code> .
<code>dropdownAlignRight</code>	Align the menu to the right instead of the left. If set to <code>'auto'</code> , the menu will automatically align right if there isn't room for the menu's full width when aligned to the left. Type: <code>boolean 'auto'</code> ; Default: <code>false</code> .
<code>dropupAuto</code>	checks to see which has more room, above or below. If the dropup has enough room to fully open normally, but there is more room above, the dropup still opens normally. Otherwise, it becomes a dropdown. If <code>dropupAuto</code> is set to <code>false</code> , dropdowns must be called manually. Type: <code>boolean</code> ; Default: <code>true</code> .
<code>header</code>	adds a header to the top of the menu; includes a close button by default Type: <code>string</code> ; Default: <code>false</code> .
<code>hideDisabled</code>	removes disabled options and optgroups from the menu <code>data-hide-disabled</code> : <code>true</code> Type: <code>boolean</code> ; Default: <code>false</code> .
<code>iconBase</code>	Set the base to use a different icon font instead of Glyphicons. If changing <code>iconBase</code> , you might also want to change <code>tickIcon</code> , in case the new icon font uses a different naming scheme. Type: <code>string</code> ; Default: <code>'glyphicon'</code> .
<code>liveSearch</code>	When set to <code>true</code> , adds a search box to the top of the selectpicker dropdown. Type: <code>boolean</code> ; Default: <code>false</code> .
<code>liveSearchNormalize</code>	Setting <code>liveSearchNormalize</code> to <code>true</code> allows for accent-insensitive searching. Type: <code>boolean</code> ; Default: <code>false</code> .
<code>liveSearchPlaceholder</code>	When set to a string, a placeholder attribute equal to the string will be added to the <code>liveSearch</code> input. Type: <code>string</code> ; Default: <code>null</code> .
<code>liveSearchStyle</code>	When set to <code>'contains'</code> , searching will reveal options that contain the searched text. For example, searching for <code>pl</code> will return both <code>Apple</code> , <code>Plum</code> , and <code>Plantain</code> . When set to <code>'startsWith'</code> , searching for <code>pl</code> will return only <code>Plum</code> and <code>Plantain</code> . Type: <code>string</code> ; Default: <code>'contains'</code> .
<code>maxOptions</code>	When set to an integer and in a multi-select, the number of selected options cannot exceed the given value. This option can also exist as a data-attribute for an <code><optgroup></code> , in which case it only applies to that <code><optgroup></code> . Type: <code>integer false</code> ; Default: <code>false</code> .
<code>maxOptionsText</code>	The text that is displayed when <code>maxOptions</code> is enabled and the maximum number of options for the given scenario have been selected. If a function is used, it must return an array. <code>array[0]</code> is the text used when <code>maxOptions</code> is applied to the entire select element. <code>array[1]</code> is the text used when <code>maxOptions</code> is used on an <code>optgroup</code> . If a string is used, the same text is used for both the element and the <code>optgroup</code> . Type: <code>string array function</code> ; Default: <code>function</code> .

mobile	When set to true, enables the device's native menu for select menus. Type: boolean; Default: false.
multipleSeparator	Set the character displayed in the button that separates selected options. Type: string; Default: ', '.
noneSelectedText	The text that is displayed when a multiple select has no selected options. Type: string; Default: 'Nothing selected'.
noneResultsText	The text displayed when a search doesn't return any results. Type: string; Default: 'No results matched 0'.
selectAllText	The text on the button that selects all options when actionsBox is enabled. Type: string; Default: 'Select All'.
selectedTextFormat	Specifies how the selection is displayed with a multiple select. 'values' displays a list of the selected options (separated by multipleSeparator. 'static' simply displays the select element's title. 'count' displays the total number of selected options. 'count > x' behaves like 'values' until the number of selected options is greater than x; after that, it behaves like 'count'. Type: 'values' 'static' 'count' 'count > x' (where x is an integer); Default: 'values'.
selectOnTab	When set to true, treats the tab character like the enter or space characters within the selectpicker dropdown. Type: boolean; Default: false.
showContent	When set to true, display custom HTML associated with selected option(s) in the button. When set to false, the option value will be displayed instead. Type: boolean; Default: true.
showIcon	When set to true, display icon(s) associated with selected option(s) in the button. Type: boolean; Default: true.
showSubtext	When set to true, display subtext associated with a selected option in the button. Type: boolean; Default: false.
showTick	Show checkmark on selected option (for items without multiple attribute). Type: boolean; Default: false.
size	When set to 'auto', the menu always opens up to show as many items as the window will allow without being cut off. When set to an integer, the menu will show the given number of items, even if the dropdown is cut off. When set to false, the menu will always show all items. Type: 'auto' integer false; Default: 'auto'.
style	When set to a string, add the value to the button's style. Type: string null; Default: null.
tickIcon	Set which icon to use to display as the "tick" next to selected options. Type: string; Default: 'glyphicon-ok'.
title	The default title for the selectpicker. Type: string null; Default: null.
virtualScroll	If enabled, the items in the dropdown will be rendered using virtualization (i.e. only the items that are within the viewport will be rendered). This drastically improves performance for selects with a large number of options. Set to an integer to only use virtualization if the select has at least that number of options. Type: boolean integer; Default: 600.

width	When set to auto, the width of the selectpicker is automatically adjusted to accommodate the widest option. When set to a css-width, the width of the selectpicker is forced inline to the given value. When set to false, all width information is removed. Type: 'auto' 'fit' css-width false (where css-width is a CSS width with units, e.g. 100px); Default: false.
windowPadding	This is useful in cases where the window has areas that the dropdown menu should not cover - for instance a fixed header. When set to an integer, the same padding will be added to all sides. Alternatively, an array of integers can be used in the format [top, right, bottom, left]. Type: integer array; Default: 0.

Note

Documentation is from Bootstrap-select page.

Examples

```

if (interactive()) {
  library(shiny)
  library(shinyWidgets)

  ui <- fluidPage(
    pickerInput(
      inputId = "month",
      label = "Select a month",
      choices = month.name,
      multiple = TRUE,
      options = pickerOptions(
        actionsBox = TRUE,
        title = "Please select a month",
        header = "This is a title"
      )
    )
  )

  server <- function(input, output, session) {

  }

  shinyApp(ui, server)
}

```

prettyCheckbox

Pretty Checkbox Input

Description

Create a pretty checkbox that can be used to specify logical values.

Usage

```
prettyCheckbox(inputId, label, value = FALSE, status = "default",
  shape = c("square", "curve", "round"), outline = FALSE,
  fill = FALSE, thick = FALSE, animation = NULL, icon = NULL,
  plain = FALSE, bigger = FALSE, inline = FALSE, width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control.
value	Initial value (TRUE or FALSE).
status	Add a class to the checkbox, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
shape	Shape of the checkbox between square, curve and round.
outline	Color also the border of the checkbox (TRUE or FALSE).
fill	Fill the checkbox with color (TRUE or FALSE).
thick	Make the content inside checkbox smaller (TRUE or FALSE).
animation	Add an animation when checkbox is checked, a value between smooth, jelly, tada, rotate, pulse.
icon	Optional, display an icon on the checkbox, must be an icon created with icon.
plain	Remove the border when checkbox is checked (TRUE or FALSE).
bigger	Scale the checkboxes a bit bigger (TRUE or FALSE).
inline	Display the input inline, if you want to place checkboxes next to each other.
width	The width of the input, e.g. 400px, or 100%.

Value

TRUE or FALSE server-side.

Note

Due to the nature of different checkbox design, certain animations are not applicable in some arguments combinations. You can find examples on the pretty-checkbox official page : <https://lokesh-coder.github.io/pretty-checkbox/>.

See Also

See [updatePrettyCheckbox](#) to update the value server-side. See [prettySwitch](#) and [prettyToggle](#) for similar widgets.

Examples

```

    }
  shinyApp(ui, server)
}

## End(Not run)

```

```
prettyCheckboxGroup Pretty Checkbox Group Input Control
```

Description

Create a group of pretty checkboxes that can be used to toggle multiple choices independently. The server will receive the input as a character vector of the selected values.

Usage

```
prettyCheckboxGroup(inputId, label, choices = NULL, selected = NULL,
  status = "default", shape = c("square", "curve", "round"),
  outline = FALSE, fill = FALSE, thick = FALSE, animation = NULL,
  icon = NULL, plain = FALSE, bigger = FALSE, inline = FALSE,
  width = NULL, choiceNames = NULL, choiceValues = NULL)
```

Arguments

<code>inputId</code>	The input slot that will be used to access the value.
<code>label</code>	Display label for the control.
<code>choices</code>	List of values to show checkboxes for. If elements of the list are named then that name rather than the value is displayed to the user. If this argument is provided, then <code>choiceNames</code> and <code>choiceValues</code> must not be provided, and vice-versa. The values should be strings; other types (such as logicals and numbers) will be coerced to strings.
<code>selected</code>	The values that should be initially selected, if any.
<code>status</code>	Add a class to the checkbox, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
<code>shape</code>	Shape of the checkbox between square, curve and round.
<code>outline</code>	Color also the border of the checkbox (TRUE or FALSE).
<code>fill</code>	Fill the checkbox with color (TRUE or FALSE).
<code>thick</code>	Make the content inside checkbox smaller (TRUE or FALSE).
<code>animation</code>	Add an animation when checkbox is checked, a value between smooth, jelly, tada, rotate, pulse.

icon	Optional, display an icon on the checkbox, must be an icon created with <code>icon</code> .
plain	Remove the border when checkbox is checked (TRUE or FALSE).
bigger	Scale the checkboxes a bit bigger (TRUE or FALSE).
inline	If TRUE, render the choices inline (i.e. horizontally).
width	The width of the input, e.g. 400px, or 100%.
choiceNames	List of names to display to the user.
choiceValues	List of values corresponding to choiceNames

Value

A character vector or NULL server-side.

See Also

[updatePrettyCheckboxGroup](#) for updating values server-side.

Examples

```
## Not run:

  output$res5 <- renderPrint(input$checkgroup5)

}

shinyApp(ui, server)

}

## End(Not run)

```

```
prettyRadioButtons    Pretty radio Buttons Input Control
```

Description

Create a set of radio buttons used to select an item from a list.

Usage

```
prettyRadioButtons(inputId, label, choices = NULL, selected = NULL,
                  status = "primary", shape = c("round", "square", "curve"),
                  outline = FALSE, fill = FALSE, thick = FALSE, animation = NULL,
                  icon = NULL, plain = FALSE, bigger = FALSE, inline = FALSE,
                  width = NULL, choiceNames = NULL, choiceValues = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control.
choices	List of values to show radio buttons for. If elements of the list are named then that name rather than the value is displayed to the user. If this argument is provided, then choiceNames and choiceValues must not be provided, and vice-versa. The values should be strings; other types (such as logicals and numbers) will be coerced to strings.
selected	The values that should be initially selected, (if not specified then defaults to the first value).
status	Add a class to the radio, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
shape	Shape of the radio between square, curve and round.
outline	Color also the border of the radio (TRUE or FALSE).
fill	Fill the radio with color (TRUE or FALSE).
thick	Make the content inside radio smaller (TRUE or FALSE).
animation	Add an animation when radio is checked, a value between smooth, jelly, tada, rotate, pulse.
icon	Optional, display an icon on the radio, must be an icon created with icon.
plain	Remove the border when radio is checked (TRUE or FALSE).
bigger	Scale the radio a bit bigger (TRUE or FALSE).
inline	If TRUE, render the choices inline (i.e. horizontally).
width	The width of the input, e.g. 400px, or 100%.
choiceNames	List of names to display to the user.
choiceValues	List of values corresponding to choiceNames

Value

A character vector or NULL server-side.

Examples

```
## Not run:

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

shinyApp(ui, server)

}

```

```
## End(Not run)
```

```
prettySwitch          Pretty Switch Input
```

Description

A toggle switch to replace checkbox

Usage

```
prettySwitch(inputId, label, value = FALSE, status = "default",
  slim = FALSE, fill = FALSE, bigger = FALSE, inline = FALSE,
  width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value (TRUE or FALSE).
status	Add a class to the switch, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
slim	Change the style of the switch (TRUE or FALSE), see examples.
fill	Change the style of the switch (TRUE or FALSE), see examples.
bigger	Scale the switch a bit bigger (TRUE or FALSE).
inline	Display the input inline, if you want to place switch next to each other.
width	The width of the input, e.g. 400px, or 100%.

Value

TRUE or FALSE server-side.

Note

Appearance is better in a browser such as Chrome than in RStudio Viewer

## End(Not run)

```

prettyToggle

Pretty Toggle Input

Description

A single checkbox that changes appearance if checked or not.

Usage

```

prettyToggle(inputId, label_on, label_off, icon_on = NULL,
  icon_off = NULL, value = FALSE, status_on = "success",
  status_off = "danger", shape = c("square", "curve", "round"),
  outline = FALSE, fill = FALSE, thick = FALSE, plain = FALSE,
  bigger = FALSE, animation = NULL, inline = FALSE, width = NULL)

```

Arguments

inputId	The input slot that will be used to access the value.
label_on	Display label for the control when value is TRUE.
label_off	Display label for the control when value is FALSE
icon_on	Optional, display an icon on the checkbox when value is TRUE, must be an icon created with icon.
icon_off	Optional, display an icon on the checkbox when value is FALSE, must be an icon created with icon.
value	Initial value (TRUE or FALSE).
status_on	Add a class to the checkbox when value is TRUE, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
status_off	Add a class to the checkbox when value is FALSE, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'.
shape	Shape of the checkbox between square, curve and round.
outline	Color also the border of the checkbox (TRUE or FALSE).
fill	Fill the checkbox with color (TRUE or FALSE).
thick	Make the content inside checkbox smaller (TRUE or FALSE).
plain	Remove the border when checkbox is checked (TRUE or FALSE).
bigger	Scale the checkboxes a bit bigger (TRUE or FALSE).
animation	Add an animation when checkbox is checked, a value between smooth, jelly, tada, rotate, pulse.
inline	Display the input inline, if you want to place checkboxes next to each other.
width	The width of the input, e.g. 400px, or 100%.

Value

TRUE or FALSE server-side.

## End(Not run)

```

progress-bar

Progress Bars

Description

Create a progress bar to provide feedback on calculation.

Usage

```

progressBar(id, value, total = NULL, display_pct = FALSE,
            size = NULL, status = NULL, striped = FALSE, title = NULL,
            range_value = NULL, unit_mark = "%")

```

```

updateProgressBar(session, id, value, total = NULL, title = NULL,
                 status = NULL, range_value = NULL, unit_mark = "%")

```

Arguments

<code>id</code>	An id used to update the progress bar.
<code>value</code>	Value of the progress bar between 0 and 100, if >100 you must provide total.
<code>total</code>	Used to calculate percentage if value > 100, force an indicator to appear on top right of the progress bar.
<code>display_pct</code>	logical, display percentage on the progress bar.
<code>size</code>	Size, 'NULL' by default or a value in 'xxs', 'xs', 'sm', only work with package 'shinydashboard'.

status	Color, must be a valid Bootstrap status : primary, info, success, warning, danger.
striped	logical, add a striped effect.
title	character, optional title.
range_value	Default is to display percentage ([0, 100]), but you can specify a custom range, e.g. -50, 50.
unit_mark	Unit for value displayed on the progress bar, default to "%".
session	The 'session' object passed to function given to shinyServer.

Value

A progress bar that can be added to a UI definition.

Description

Progress bar in a sweet alert

Usage

```

progressSweetAlert(session, id, value, total = NULL,
  display_pct = FALSE, size = NULL, status = NULL, striped = FALSE,
  title = NULL)

```

Arguments

session	The session object passed to function given to shinyServer.
id	An id used to update the progress bar.
value	Value of the progress bar between 0 and 100, if >100 you must provide total.
total	Used to calculate percentage if value > 100, force an indicator to appear on top right of the progress bar.

display_pct	logical, display percentage on the progress bar.
size	Size, 'NULL' by default or a value in 'xxs', 'xs', 'sm', only work with package 'shinydashboard'.

      )
    })
  }
}
```

```

shinyApp(ui = ui, server = server)

}

## End(Not run)

```

radioGroupButtons *Buttons Group Radio Input Control*

Description

Create buttons grouped that act like radio buttons.

Usage

```

radioGroupButtons(inputId, label = NULL, choices = NULL,
  selected = NULL, status = "default", size = "normal",
  direction = "horizontal", justified = FALSE, individual = FALSE,
  checkIcon = list(), width = NULL, choiceNames = NULL,
  choiceValues = NULL)

```

Arguments

inputId	The input slot that will be used to access the value.
label	Input label.
choices	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user).
selected	The initially selected value.
status	Add a class to the buttons, you can use Bootstrap status like 'info', 'primary', 'danger', 'warning' or 'success'. Or use an arbitrary strings to add a custom class, e.g. : with status = 'myClass', buttons will have class btn-myClass.
size	Size of the buttons ('xs', 'sm', 'normal', 'lg')
direction	Horizontal or vertical
justified	If TRUE, fill the width of the parent div
individual	If TRUE, buttons are separated.
checkIcon	A list, if no empty must contain at least one element named 'yes' corresponding to an icon to display if the button is checked.
width	The width of the input, e.g. '400px', or '100%'.
choiceNames, choiceValues	Same as in radioButtons . List of names and values, respectively, that are displayed to the user in the app and correspond to the each choice (for this reason, choiceNames and choiceValues must have the same length).

Value

A buttons group control that can be added to a UI definition.

Examples

```
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

  ui <- fluidPage(
    radioGroupButtons(inputId = "somevalue", choices = c("A", "B", "C")),
    verbatimTextOutput("value")
  )
  server <- function(input, output) {
    output$value <- renderText({ input$somevalue })
  }
  shinyApp(ui, server)
}

## End(Not run)
```

 searchInput

Search Input

Description

A text input only triggered when Enter key is pressed or search button clicked

Usage

```
searchInput(inputId, label = NULL, value = "", placeholder = NULL,
  btnSearch = NULL, btnReset = NULL, resetValue = "", width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value.
placeholder	A character string giving the user a hint as to what can be entered into the control.
btnSearch	An icon for the button which validate the search.
btnReset	An icon for the button which reset the search.
resetValue	Value used when reset button is clicked, default to "", if NULL value is not reset.
width	The width of the input, e.g. '400px', or '100%'.

Note

The two buttons ('search' and 'reset') act like `actionButton`, you can retrieve their value server-side with `input$<INPUTID>_search` and `input$<INPUTID>_reset`.

See Also

[updateSearchInput](#) to update value server-side.

Examples

```
## Not run:
if (interactive()) {
  ui <- fluidPage(
    tags$h1("Search Input"),
    br(),
    searchInput(
      inputId = "search", label = "Enter your text",
      placeholder = "A placeholder",
      btnSearch = icon("search"),
      btnReset = icon("remove"),
      width = "450px"
    ),
    br(),
    verbatimTextOutput(outputId = "res")
  )

  server <- function(input, output, session) {
    output$res <- renderPrint({
      input$search
    })
  }

  shinyApp(ui = ui, server = server)
}

## End(Not run)
```

selectizeGroup-module *Selectize Group*

Description

Group of mutually dependent 'selectizeInput' for filtering data.frame's columns (like in Excel).

Usage

```
selectizeGroupUI(id, params, label = NULL, btn_label = "Reset filters",
  inline = TRUE)
```

```
selectizeGroupServer(input, output, session, data, vars)
```

Arguments

<code>id</code>	Module's id.
<code>params</code>	A named list of parameters passed to each 'selectizeInput', you can use : 'inputId' (obligatory, must be variable name), 'label', 'placeholder'.
<code>label</code>	Character, global label on top of all labels.
<code>btn_label</code>	Character, reset button label.
<code>inline</code>	If TRUE (the default), 'selectizeInput's are horizontally positioned, otherwise vertically.
<code>input</code>	standard shiny input.
<code>output</code>	standard shiny output.
<code>session</code>	standard shiny session.
<code>data</code>	a data.frame, or an object that can be coerced to data.frame.
<code>vars</code>	character, columns to use to create filters, must correspond to variables listed in params.

Value

a reactive function containing data filtered.

Examples

```
## Not run:

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

  data("mpg", package = "ggplot2")

  ui <- fluidPage(
    fluidRow(
      column(
        width = 10, offset = 1,
        tags$h3("Filter data with selectize group"),
        panel(
          selectizeGroupUI(
            id = "my-filters",
            params = list(
              manufacturer = list(inputId = "manufacturer", title = "Manufacturer:"),
```

```

        model = list(inputId = "model", title = "Model:"),
        trans = list(inputId = "trans", title = "Trans:"),
        class = list(inputId = "class", title = "Class:")
      )
    ), status = "primary"
  ),
  dataTableOutput(outputId = "table")
)
)
)

server <- function(input, output, session) {
  res_mod <- callModule(
    module = selectizeGroupServer,
    id = "my-filters",
    data = mpg,
    vars = c("manufacturer", "model", "trans", "class")
  )
  output$table <- renderDataTable(res_mod())
}

shinyApp(ui, server)

}

## End(Not run)

```

sendSweetAlert

Display a Sweet Alert to the user

Description

Send a message from the server and launch a sweet alert in the UI.

Usage

```
sendSweetAlert(session, title = "Title", text = NULL, type = NULL,
  btn_labels = "Ok", html = FALSE, closeOnClickOutside = TRUE)
```

Arguments

session	The session object passed to function given to shinyServer.
title	Title of the alert.
text	Text of the alert.
type	Type of the alert : info, success, warning or error.
btn_labels	Label(s) for button(s), can be of length 2, in which case the alert will have two buttons.

html Does text contains HTML tags ?
closeOnClickOutside Decide whether the user should be able to dismiss the modal by clicking outside of it, or not.

See Also

         pch = 4, cex = 4, lwd = 4)
})
}
)
}

## End(Not run)

```

setBackgroundColor *Custom background color for your shinyapp*

Description

Allow to change the background color of your shinyapp.

Usage

```
setBackgroundColor(color = "ghostwhite", gradient = c("linear",
  "radial"), direction = c("bottom", "top", "right", "left"))
```

Arguments

color	Background color. Use either the fullname or the Hex code (https://www.w3schools.com/colors/colors_hex.asp). If more than one color is used, a gradient background is set.
gradient	Type of gradient: linear or radial.
direction	Direction for gradient, by default to bottom. Possibles choices are bottom, top, right or left, two values can be used, e.g. c("bottom", "right").

Examples

```
## Not run:

if (interactive()) {
```

```
### Uniform color background :

library(shiny)
library(shinyWidgets)

ui <- fluidPage(
  tags$h2("Change shiny app background"),
  setBackgroundColor("ghostwhite")
)

server <- function(input, output, session) {

}

shinyApp(ui, server)

### linear gradient background :

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

  # use a gradient in background
  setBackgroundColor(
    color = c("#F7FBFF", "#2171B5"),
    gradient = "linear",
    direction = "bottom"
  ),

  titlePanel("Hello Shiny!"),
  sidebarLayout(
    sidebarPanel(
      sliderInput("obs",
        "Number of observations:",
        min = 0,
        max = 1000,
        value = 500)
    ),
    mainPanel(
      plotOutput("distPlot")
    )
  )
)

server <- function(input, output, session) {
  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)
```

```
### radial gradient background :

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

  # use a gradient in background
  setBackgroundColor(
    color = c("#F7FBFF", "#2171B5"),
    gradient = "radial",
    direction = c("top", "left")
  ),

  titlePanel("Hello Shiny!"),
  sidebarLayout(
    sidebarPanel(
      sliderInput("obs",
                  "Number of observations:",
                  min = 0,
                  max = 1000,
                  value = 500)
    ),
    mainPanel(
      plotOutput("distPlot")
    )
  )
)

server <- function(input, output, session) {
  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)

}

## End(Not run)
```

setBackgroundImage *Custom background image for your shinyapp*

Description

Allow to change the background image of your shinyapp.

Usage

```
setBackgroundImage(src = NULL)
```

Arguments

`src` Url or path to the image, if using local image, the file must be in `www/` directory and the path not contain `www/`.

Examples

```
if (interactive()) {  
  
  library(shiny)  
  library(shinyWidgets)  
  
  ui <- fluidPage(  
    tags$h2("Add a shiny app background image"),  
    setBackgroundImage(src = "http://wallpics4k.com/wp-content/uploads/2014/07/470318.jpg")  
  )  
  
  server <- function(input, output, session) {  
  
  }  
  
  shinyApp(ui, server)  
  
}
```

setShadow

Custom shadows

Description

Allow to apply a shadow on a given element.

Usage

```
setShadow(id = NULL, class = NULL)
```

Arguments

`id` Use this argument if you want to target an individual element.

`class` The element to which the shadow should be applied. For example, class is set to `box`.

Examples

```
if (interactive()) {

  library(shiny)
  library(shinydashboard)
  library(shinydashboardPlus)
  library(shinyWidgets)

  boxTag <- boxPlus(
    title = "Closable box, with label",
    closable = TRUE,
    enable_label = TRUE,
    label_text = 1,
    label_status = "danger",
    status = "warning",
    solidHeader = FALSE,
    collapsible = TRUE,
    p("Box Content")
  )

  shinyApp(
    ui = dashboardPagePlus(
      header = dashboardHeaderPlus(
        enable_rightsidebar = TRUE,
        rightSidebarIcon = "gears"
      ),
      sidebar = dashboardSidebar(),
      body = dashboardBody(

        setShadow(class = "box"),
        setShadow(id = "my-progress"),

        tags$h2("Add shadow to the box class"),
        fluidRow(boxTag, boxTag),
        tags$h2("Add shadow only to the first element using id"),
        tagAppendAttributes(
          verticalProgress(
            value = 10,
            striped = TRUE,
            active = TRUE
          ),
          id = "my-progress"
        ),
        verticalProgress(
          value = 50,
          active = TRUE,
          status = "warning",
          size = "xs"
        ),
        verticalProgress(
          value = 20,
          status = "danger",
```

```

        size = "sm",
        height = "60%"
      )
    ),
    rightsidebar = rightSidebar(),
    title = "DashboardPage"
  ),
  server = function(input, output) { }
}

```

setSliderColor *Color editor for sliderInput*

Description

Edit the color of the original shiny's sliderInputs

Usage

```
setSliderColor(color, sliderId)
```

Arguments

color	The color to apply. This can also be a vector of colors if you want to customize more than 1 slider. Either pass the name of the color such as 'Chartreuse' and 'Chocolate' or the HEX notation such as '#7FFF00' and '#D2691E'.
sliderId	The id of the customized slider(s). This can be a vector like c(1, 2), if you want to modify the 2 first sliders. However, if you only want to modify the second slider, just use the value 2.

Note

See also https://www.w3schools.com/colors/colors_names.asp to have an overview of all colors.

See Also

See [chooseSliderSkin](#) to update the global skin of your sliders.

Examples

```

## Not run:

if (interactive()) {

  library(shiny)
  library(shinyWidgets)

```

```

ui <- fluidPage(

  # only customize the 2 first sliders and the last one
  # the color of the third one is empty
  setSliderColor(c("DeepPink ", "#FF4500", "", "Teal"), c(1, 2, 4)),
  sliderInput("obs", "My pink slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs2", "My orange slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs3", "My basic slider:",
              min = 0, max = 100, value = 50
  ),
  sliderInput("obs3", "My teal slider:",
              min = 0, max = 100, value = 50
  ),
  plotOutput("distPlot")
)

server <- function(input, output) {

  output$distPlot <- renderPlot({
    hist(rnorm(input$obs))
  })
}

shinyApp(ui, server)

}

## End(Not run)

```

shinyWidgets

shinyWidgets: Custom inputs widgets for Shiny.

Description

The shinyWidgets package provides several custom widgets to extend those available in package shiny

Examples

```

## Not run:
if (interactive()) {
  shinyWidgets::shinyWidgetsGallery()
}

```

```
## End(Not run)
```

shinyWidgetsGallery *Launch the shinyWidget Gallery*

Description

A gallery of widgets available in the package.

Usage

```
shinyWidgetsGallery()
```

Examples

```
## Not run:  
  
if (interactive()) {  
  shinyWidgetsGallery()  
}  
  
## End(Not run)
```

sliderTextInput *Slider Text Input Widget*

Description

Constructs a slider widget with characters instead of numeric values.

Usage

```
sliderTextInput(inputId, label, choices, selected = NULL,  
  animate = FALSE, grid = FALSE, hide_min_max = FALSE,  
  from_fixed = FALSE, to_fixed = FALSE, from_min = NULL,  
  from_max = NULL, to_min = NULL, to_max = NULL,  
  force_edges = FALSE, width = NULL, pre = NULL, post = NULL,  
  dragRange = TRUE)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
choices	Character vector to select a value from.
selected	The initially selected value, if length > 1, create a range slider.
animate	TRUE to show simple animation controls with default settings, for more details see sliderInput .
grid	Logical, show or hide ticks marks.
hide_min_max	Hides min and max labels.
from_fixed	Fix position of left (or single) handle.
to_fixed	Fix position of right handle.
from_min	Set minimum limit for left handle.
from_max	Set the maximum limit for left handle.
to_min	Set minimum limit for right handle.
to_max	Set the maximum limit for right handle.
force_edges	Slider will be always inside it's container.
width	The width of the input, e.g. 400px, or 100%.
pre	A prefix string to put in front of the value.
post	A suffix string to put after the value.
dragRange	See the same argument in sliderInput .

Value

The value retrieved server-side is a character vector.

See Also

[updateSliderTextInput](#) to update value server-side.

Examples

```
## Not run:  
  
if (interactive()) {  
  
  library("shiny")  
  library("shinyWidgets")  
  
  ui <- fluidPage(  
    br(),  
    sliderTextInput(  
      inputId = "mySliderText",  
      label = "Month range slider:",  
      choices = month.name,  

```

```

        selected = month.name[c(4, 7)]
    ),
    verbatimTextOutput(outputId = "result")
)

server <- function(input, output, session) {
  output$result <- renderPrint(str(input$mySliderText))
}

shinyApp(ui = ui, server = server)

}

## End(Not run)

```

spectrumInput

Palette Color Picker with Spectrum Library

Description

A widget to select a color within palettes, and with more options if needed.

Usage

```

spectrumInput(inputId, label, choices = NULL, selected = NULL,
  flat = FALSE, options = list(), update_on = c("move", "dragstop",
  "change"), width = NULL)

```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
choices	List of colors to display in the menu.
selected	The initially selected value.
flat	Display the menu inline.
options	Additional options to pass to spectrum, possible values are described here : https://bgrins.github.io/spectrum/#options .
update_on	When to update value server-side: "move" (default, each time a new color is selected), "dragstop" (when use user stop dragging cursor), "change" (when the input is closed).
width	The width of the input, e.g. 400px, or 100%.

Value

The selected color in Hex format server-side

Examples

```
## Not run:

if (interactive()) {

  library("shiny")
  library("shinyWidgets")
  library("RColorBrewer")

  ui <- fluidPage(
    tags$h1("Spectrum color picker"),

    br(),

    spectrumInput(
      inputId = "myColor",
      label = "Pick a color:",
      choices = list(
        list('black', 'white', 'blanchedalmond', 'steelblue', 'forestgreen'),
        as.list(brewer.pal(n = 9, name = "Blues")),
        as.list(brewer.pal(n = 9, name = "Greens")),
        as.list(brewer.pal(n = 11, name = "Spectral")),
        as.list(brewer.pal(n = 8, name = "Dark2"))
      ),
      options = list(`toggle-palette-more-text` = "Show more")
    ),
    verbatimTextOutput(outputId = "res")
  )

  server <- function(input, output, session) {

    output$res <- renderPrint(input$myColor)

  }

  shinyApp(ui, server)

}

## End(Not run)
```

switchInput

Bootstrap Switch Input Control

Description

Create a toggle switch.

Usage

```
switchInput(inputId, label = NULL, value = FALSE, onLabel = "ON",
  offLabel = "OFF", onStatus = NULL, offStatus = NULL,
  size = "default", labelWidth = "auto", handleWidth = "auto",
  disabled = FALSE, inline = FALSE, width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display a text in the center of the switch.
value	Initial value (TRUE or FALSE).
onLabel	Text on the left side of the switch (TRUE).
offLabel	Text on the right side of the switch (FALSE).
onStatus	Color (bootstrap status) of the left side of the switch (TRUE).
offStatus	Color (bootstrap status) of the right side of the switch (FALSE).
size	Size of the buttons ('default', 'mini', 'small', 'normal', 'large').
labelWidth	Width of the center handle in pixels.
handleWidth	Width of the left and right sides in pixels.
disabled	Logical, display the toggle switch in disabled state?.
inline	Logical, display the toggle switch inline?
width	The width of the input : 'auto', 'fit', '100px', '75%'.

Value

A switch control that can be added to a UI definition.

Note

For more information, see the project on Github <https://github.com/Bttstrp/bootstrap-switch>.

See Also

Examples

```
## Not run:
## Only run examples in interactive R sessions
if (interactive()) {

# Examples in the gallery :
shinyWidgets::shinyWidgetsGallery()

# Basic usage :
ui <- fluidPage(
  switchInput(inputId = "somevalue"),
```

```

    verbatimTextOutput("value")
  )
  server <- function(input, output) {
    output$value <- renderPrint({ input$somevalue })
  }
  shinyApp(ui, server)
}

## End(Not run)

```

textInputAddon	<i>Text with Add-on Input Control</i>
----------------	---------------------------------------

Description

Create text field with add-on.

Usage

```
textInputAddon(inputId, label, value = "", placeholder = NULL, addon,
              width = NULL)
```

Arguments

inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	Initial value..
placeholder	A character string giving the user a hint as to what can be entered into the control.
addon	An icon tag, created by icon .
width	The width of the input : 'auto', 'fit', '100px', '75%'

Value

A switch control that can be added to a UI definition.

Examples

```

## Not run:
## Only run examples in interactive R sessions
if (interactive()) {
  shinyApp(
    ui = fluidPage(
      textInputAddon(inputId = "id", label = "Label", placeholder = "Username", addon = icon("at")),

    ),
    server = function(input, output) {
      output$out <- renderPrint({

```

```

        input$id
      })
    }
  )
}

## End(Not run)

```

toggleDropDownButton *Toggle a dropdown menu*

Description

Open or close a dropdown menu server-side.

Usage

```
toggleDropDownButton(inputId, session = getDefaultReactiveDomain())
```

Arguments

inputId	Id for the dropdown to toggle.
session	Standard shiny session.

Examples

```

## Not run:

if (interactive()) {

library("shiny")
library("shinyWidgets")

ui <- fluidPage(
  tags$h2("Toggle Dropdown Button"),

## End(Not run)

```

 tooltipOptions

Tooltip options

Description

List of options for tooltip for a dropdown menu button.

Usage

```
tooltipOptions(placement = "right", title = "Params", html = FALSE)
```

Arguments

placement	Placement of tooltip : right, top, bottom, left.
title	Text of the tooltip
html	Logical, allow HTML tags inside tooltip

updateAirDateInput *Change the value of `airDatepickerInput` on the client*

Description

Change the value of `airDatepickerInput` on the client

Usage

```
updateAirDateInput(session, inputId, label = NULL, value = NULL,  
  clear = FALSE, options = NULL)
```

Arguments

<code>session</code>	The session object passed to function given to shinyServer.
<code>inputId</code>	The id of the input object.
<code>label</code>	The label to set for the input object.
<code>value</code>	The value to set for the input object.
<code>clear</code>	Logical, clear all previous selected dates.
<code>options</code>	Options to update, see available ones here: http://t1m0n.name/air-datepicker/docs/ .

Examples

```
## Not run:  
  
demoAirDatepicker("update")  
  
## End(Not run)
```

updateAwesomeCheckbox *Change the value of an awesome checkbox input on the client*

Description

Change the value of an awesome checkbox input on the client

Usage

```
updateAwesomeCheckbox(session, inputId, label = NULL, value = NULL)
```

Arguments

session	standard shiny session
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.

updateAwesomeCheckboxGroup

Change the value of a [awesomeCheckboxGroup](#) input on the client

Description

Change the value of a [awesomeCheckboxGroup](#) input on the client

Usage

```
updateAwesomeCheckboxGroup(session, inputId, label = NULL,
  choices = NULL, selected = NULL, inline = FALSE,
  status = "primary")
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	Input label.
choices	List of values to show checkboxes for.
selected	The values that should be initially selected, if any.
inline	If TRUE, render the choices inline (i.e. horizontally)
status	Color of the buttons.

updateAwesomeRadio *Change the value of a radio input on the client*

Description

Change the value of a radio input on the client

Usage

```
updateAwesomeRadio(session, inputId, label = NULL, choices = NULL,
  selected = NULL, inline = FALSE, status = "primary",
  checkbox = FALSE)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	Input label.
choices	List of values to select from (if elements of the list are named then that name rather than the value is displayed to the user)
selected	The initially selected value
inline	If TRUE, render the choices inline (i.e. horizontally)
status	Color of the buttons
checkbox	Checkbox style

Change the value of a checkboxes group buttons input on the client

Description

Change the value of a radio group buttons input on the client

Usage

```
updateCheckboxGroupButtons(session, inputId, label = NULL,
  choices = NULL, selected = NULL, status = "default",
  size = "normal", checkIcon = list(), choiceNames = NULL,
  choiceValues = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set.
choices	The new choices for the input.
selected	The values selected.
status	Status, only used if choices is not NULL.

size Size, only used if choices is not NULL.
 checkIcon Icon, only used if choices is not NULL.
 choiceNames, choiceValues
 List of names and values, an alternative to choices.

## End(Not run)

```

updateNoUiSliderInput *Change the value of a no ui slider input on the client*

Description

Change the value of a no ui slider input on the client

Usage

```
updateNoUiSliderInput(session, inputId, value = NULL, range = NULL,
  disable = FALSE)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
value	The new value.
range	The new range, must be of length 2 with c(min, max).
disable	logical, disable or not the slider, if disabled the user can no longer modify the slider value

Examples

```

## Not run:

if (interactive()) {

  demoNoUiSlider("update")

}

## End(Not run)

```

 updateNumericRangeInput

Change the value of a numeric range input

Description

Change the value of a numeric range input.

Usage

```
updateNumericRangeInput(session, inputId, label, value)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The input slot that will be used to access the value.
label	Display label for the control, or NULL for no label.
value	The initial value(s) for the range. A numeric vector of length one will be duplicated to represent the minimum and maximum of the range; a numeric vector of two or more will have its minimum and maximum set the minimum and maximum of the range.

updatePickerInput

Change the value of a select picker input on the client

Description

Change the value of a picker input on the client

Usage

```
updatePickerInput(session, inputId, label = NULL, selected = NULL,
  choices = NULL, choicesOpt = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	Display a text in the center of the switch.
selected	The initially selected value (or multiple values if multiple = TRUE). If not specified then defaults to the first value for single-select lists and no values for multiple select lists.
choices	List of values to select from. If elements of the list are named then that name rather than the value is displayed to the user.
choicesOpt	Options for choices in the dropdown menu

## End(Not run)

```

updatePrettySwitch *Change the value of a pretty switch on the client*

Description

Change the value of a pretty switch on the client

Usage

```
updatePrettySwitch(session, inputId, label = NULL, value = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.

Examples

```
## Not run:

}

## End(Not run)
```

updateRadioGroupButtons

Change the value of a radio group buttons input on the client

Description

Change the value of a radio group buttons input on the client

Usage

```
updateRadioGroupButtons(session, inputId, label = NULL, choices = NULL,
  selected = NULL, status = "default", size = "normal",
  checkIcon = list(), choiceNames = NULL, choiceValues = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set.
choices	The new choices for the input.
selected	The value selected.
status	Status, only used if choices is not NULL.
size	Size, only used if choices is not NULL.
checkIcon	Icon, only used if choices is not NULL.
choiceNames, choiceValues	List of names and values, an alternative to choices.

Examples

```
## Not run:

if (interactive()) {

  library("shiny")
```

```
library("shinyWidgets")

ui <- fluidPage(

## End(Not run)

```

updateSearchInput *Change the value of a search input on the client*

Description

Change the value of a search input on the client

Usage

```

updateSearchInput(session, inputId, label = NULL, value = NULL,
  placeholder = NULL, trigger = FALSE)

```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set for the input object.
value	The value to set for the input object.
placeholder	The placeholder to set for the input object.
trigger	Logical, update value server-side as well.

Note

By default, only UI value is updated, use `trigger = TRUE` to update both UI and Server value.

Examples

```

## Not run:

if (interactive()) {

```

updateSliderTextInput *Change the value of a slider text input on the client*

Description

Change the value of a slider text input on the client

Usage

```
updateSliderTextInput(session, inputId, label = NULL, selected = NULL,
  choices = NULL, from_fixed = NULL, to_fixed = NULL)
```

Arguments

session	The session object passed to function given to shinyServer.
inputId	The id of the input object.
label	The label to set.
selected	The values selected.
choices	The new choices for the input.
from_fixed	Fix the left handle (or single handle).
to_fixed	Fix the right handle.

## End(Not run)

```

 useBs4Dash

Use 'bs4Dash' in 'shiny'

Description

Allow to use functions from 'bs4Dash' into a classic 'shiny' app, specifically bs4ValueBox, bs4InfoBox and bs4Card.

Usage

```
useBs4Dash(old_school = FALSE)
```

Arguments

`old_school` FALSE by default. Experimental.

Examples

```
## Not run:
if (interactive()) {

  library(shiny)
  library(bs4Dash)
  library(shinyWidgets)

  ui <- fluidPage(
    h1("Import bs4Dash elements inside shiny!", align = "center"),
    h5("Don't need any sidebar, navbar, ...", align = "center"),
    h5("Only focus on basic elements for a pure interface", align = "center"),

    # use this in non dashboard app
    setBackgroundColor(color = "ghostwhite"),
    useBs4Dash(old_school = FALSE),

    # infoBoxes

## End(Not run)

```

useSweetAlert *Load Sweet Alert dependencies*

Description

This function is useless for sendSweetAlert, confirmSweetAlert, inputSweetAlert, but is still needed for progressSweetAlert.

Usage

```
useSweetAlert()
```

Note

Use receiveSweetAlert() in the UI and sendSweetAlert() in the server.

See Also

[sendSweetAlert](#), [confirmSweetAlert](#), [inputSweetAlert](#)

vertical-tab *Vertical tab panel*

Description

Vertical tab panel

Usage

```
verticalTabsetPanel(..., selected = NULL, id = NULL,
  color = "#112446", contentWidth = 9, menuSide = "left")
```

```
verticalTabPanel(title, ..., value = title, icon = NULL,
  box_height = "160px")
```

Arguments

...	For <code>verticalTabsetPanel</code> , <code>verticalTabPanel</code> to include, and for the later, UI elements.
<code>selected</code>	The value (or, if none was supplied, the <code>title</code>) of the tab that should be selected by default. If <code>NULL</code> , the first tab will be selected.
<code>id</code>	If provided, you can use <code>input\$id</code> in your server logic to determine which of the current tabs is active. The value will correspond to the value argument that is passed to <code>verticalTabPanel</code> .
<code>color</code>	Color for the tab panels.
<code>contentWidth</code>	Width of the content panel (must be between 1 and 12), menu width will be <code>12 - contentWidth</code> .
<code>menuSide</code>	Side for the menu: right or left.
<code>title</code>	Display title for tab.
<code>value</code>	Not used yet.
<code>icon</code>	Optional icon to appear on the tab.
<code>box_height</code>	Height for the title box.

See Also

[updateVerticalTabsetPanel](#) for updating selected tabs.

Examples

```
## Not run:

if (interactive()) {

library(shiny)
library(shinyWidgets)

ui <- fluidPage(

## End(Not run)

```

wNumbFormat

Format numbers in noUiSliderInput

Description

Format numbers in noUiSliderInput

Usage

```
wNumbFormat(decimals = NULL, mark = NULL, thousand = NULL,
            prefix = NULL, suffix = NULL, negative = NULL)
```

Arguments

decimals	The number of decimals to include in the result. Limited to 7.
mark	The decimal separator. Defaults to '.' if thousand isn't already set to '.'.
thousand	Separator for large numbers. For example: ' ' would result in a formatted number of 1 000 000.
prefix	A string to prepend to the number. Use cases include prefixing with money symbols such as '\$' or ''.
suffix	A number to append to a number. For example: ',-'.
negative	The prefix for negative values. Defaults to '- '.

Value

a named list.

Note

Performed via wNumb JavaScript library : <https://refreshless.com/wnumb/>.

Examples

```
## Not run:

if (interactive()) {

  library( shiny )
  library( shinyWidgets )
