

Package ‘rbin’

January 4, 2019

Type Package

Title Tools for Binning Data

Version 0.1.1

Description Manually bin data using weight of evidence and information value. Includes other binning methods such as equal length, quantile and winsorized. Options for combining levels of categorical data are also available. Dummy variables can be generated based on the bins created using any of the available binning methods. References: Siddiqi, N. (2006) <doi:10.1002/9781119201731.biblio>.

mbank	<i>Bank marketing data set</i>
-------	--------------------------------

Description

The data is related with direct marketing campaigns of a Portuguese banking institution. The marketing campaigns were based on phone calls. Often, more than one contact to the same client was required, in order to access if the product (bank term deposit) would be ('yes') or not ('no') subscribed.

Usage

mbank

Format

A tibble with 4521 rows and 17 variables:

age age of the client
job type of job
marital marital status
education education level of the client
default has credit in default?
housing has housing loan?
loan has personal loan?
contact contact communication type
month last contact month of year
day_of_week last contact day of the week

duration last contact duration, in seconds
campaign number of contacts performed during this campaign and for this client
pdays number of days that passed by after the client was last contacted from a previous campaign
previous number of contacts performed before this campaign and for this client
poutcome outcome of the previous marketing campaign
y has the client subscribed a term deposit?

rbin	rbin <i>package</i>
------	---------------------

Description

Tools for binning data.

Details

See the README on [GitHub](#)

rbinAddin	<i>Bin continuous data</i>
-----------	----------------------------

Description

Manually bin continuous data using weight of evidence.

Usage

```
rbinAddin(data = NULL)
```

Arguments

data A data.frame or tibble.

Examples

```
## Not run:
rbinAddin(data = mbank)

## End(Not run)
```

rbinFactorAddin	<i>Custom binning</i>
-----------------	-----------------------

Description

Manually combine categorical variables using weight of evidence.

Usage

```
rbinFactorAddin(data = NULL)
```

Arguments

data A data.frame or tibble.

Examples

```
## Not run:  
rbinFactorAddin(data = mbank)  
  
## End(Not run)
```

rbin_create	<i>Create dummy variables</i>
-------------	-------------------------------

Description

Create dummy variables from bins.

Usage

```
rbin_create(data, predictor, bins)
```

Arguments

data A data.frame or tibble.
predictor Variable for which dummy variables must be created.
bins An object of class rbin_manual or rbin_quantiles or rbin_equal_length
 or rbin_winsorized.

Value

data with dummy variables.

Examples

```
k <- rbin_manual(mbank, y, age, c(29, 39, 56))
rbin_create(mbank, age, k)
```

rbin_equal_freq	<i>Equal frequency binning</i>
-----------------	--------------------------------

Description

Bin continuous data using the equal frequency binning method.

Usage

```
rbin_equal_freq(data = NULL, response = NULL, predictor = NULL,
  bins = 10)
```

Arguments

data	A data.frame or tibble.
response	Response variable.
predictor	Predictor variable.
bins	Number of bins.

Value

A tibble.

Examples

```
rbin_equal_freq(mbank, y, age, 10)
```

rbin_equal_length	<i>Equal length binning</i>
-------------------	-----------------------------

Description

Bin continuous data using the equal length binning method.

Usage

```
rbin_equal_length(data = NULL, response = NULL, predictor = NULL,
  bins = 10, include_na = TRUE)
```

```
## S3 method for class 'rbin_equal_length'
plot(x, ...)
```

Arguments

data	A data.frame or tibble.
response	Response variable.
predictor	Predictor variable.
bins	Number of bins.
include_na	logical; if TRUE, a separate bin is created for missing values.
x	An object of class rbin_equal_length.
...	further arguments passed to or from other methods.

Value

A tibble.

Examples

```
bins <- rbin_equal_length(mbank, y, age, 10)
bins

# plot
plot(bins)
```

rbin_factor

Factor binning

Description

Weight of evidence and information value for categorical data.

Usage

```
rbin_factor(data = NULL, response = NULL, predictor = NULL,
            include_na = TRUE)
```

```
## S3 method for class 'rbin_factor'
plot(x, ...)
```

Arguments

data	A data.frame or tibble.
response	Response variable.
predictor	Predictor variable.
include_na	logical; if TRUE, a separate bin is created for missing values.
x	An object of class rbin_factor.
...	further arguments passed to or from other methods.

Examples

```
bins <- rbin_factor(mbank, y, education)
bins

# plot
plot(bins)
```

rbin_factor_combine *Combine levels*

Description

Manually combine levels of categorical data.

Usage

```
rbin_factor_combine(data, var, new_var, new_name)
```

Arguments

data	A data.frame or tibble.
var	An object of class factor.
new_var	A character vector; it should include the names of the levels to be combined.
new_name	Name of the combined level.

Value

A tibble.

Examples

```
upper <- c("secondary", "tertiary")
out <- rbin_factor_combine(mbank, education, upper, "upper")
table(out$education)

out <- rbin_factor_combine(mbank, education, c("secondary", "tertiary"), "upper")
table(out$education)
```

rbin_factor_create *Create dummy variables*

Description

Create dummy variables for categorical data.

Usage

```
rbin_factor_create(data, predictor)
```

Arguments

data A data.frame or tibble.
predictor Variable for which dummy variables must be created.

Value

A tibble with dummy variables.

Examples

```
upper <- c("secondary", "tertiary")  
out <- rbin_factor_combine(mbank, education, upper, "upper")  
rbin_factor_create(out, education)
```

rbin_manual *Manual binning*

Description

Bin continuous data manually.

Usage

```
rbin_manual(data = NULL, response = NULL, predictor = NULL,  
            cut_points = NULL, include_na = TRUE)
```

```
## S3 method for class 'rbin_manual'  
plot(x, ...)
```

Arguments

data	A data.frame or tibble.
response	Response variable.
predictor	Predictor variable.
cut_points	Cut points for binning.
include_na	logical; if TRUE, a separate bin is created for missing values.
x	An object of class rbin_manual.
...	further arguments passed to or from other methods.

Details

Specify the upper open interval for each bin. 'rbin' follows the left closed and right open interval. If you want to create_bins 10 bins, the app will show you only 9 input boxes. The interval for the 10th bin is automatically computed. For example, if you want the first bin to have all the values between the minimum and including 36, then you will enter the value 37.

Value

A tibble.

Examples

```
bins <- rbin_manual(mbank, y, age, c(29, 31, 34, 36, 39, 42, 46, 51, 56))
bins

# plot
plot(bins)
```

rbin_quantiles

Quantile binning

Description

Bin continuous data using quantiles.

Usage

```
rbin_quantiles(data = NULL, response = NULL, predictor = NULL,
  bins = 10, include_na = TRUE)
```

```
## S3 method for class 'rbin_quantiles'
plot(x, ...)
```

Arguments

data	A data.frame or tibble.
response	Response variable.
predictor	Predictor variable.
bins	Number of bins.
include_na	logical; if TRUE, a separate bin is created for missing values.
x	An object of class rbin_quantiles.
...	further arguments passed to or from other methods.

Value

A tibble.

Examples

```
bins <- rbin_quantiles(mbank, y, age, 10)
bins

# plot
plot(bins)
```

rbin_winsorize	<i>Winsorized binning</i>
----------------	---------------------------

Description

Bin continuous data using winsorized method.

Usage

```
rbin_winsorize(data = NULL, response = NULL, predictor = NULL,
  bins = 10, winsor_rate = 0.05, min_val = NULL, max_val = NULL,
  include_na = TRUE)
```

```
## S3 method for class 'rbin_winsorize'
plot(x, ...)
```

Arguments

data	A data.frame or tibble.
response	Response variable.
predictor	Predictor variable.
bins	Number of bins.

<code>winsor_rate</code>	A value from 0.0 to 0.5.
<code>min_val</code>	the low border, all values being lower than this will be replaced by this value. The default is set to the 5 percent quantile of predictor.
<code>max_val</code>	the high border, all values being larger than this will be replaced by this value. The default is set to the 95 percent quantile of predictor.
<code>include_na</code>	logical; if TRUE, a separate bin is created for missing values.
<code>x</code>	An object of class <code>rbin_winsorize</code> .
<code>...</code>	further arguments passed to or from other methods.

Value

A tibble.

Examples

```
bins <- rbin_winsorize(mbank, y, age, 10, winsor_rate = 0.05)
bins

# plot
plot(bins)
```
