

# Package ‘fdasrvf’

July 31, 2019

**Type** Package

**Title** Elastic Functional Data Analysis

**Version** 1.9.2

**Date** 2019-07-25

**Author** J. Derek Tucker <jdtuck@sandia.gov>

**Maintainer** J. Derek Tucker <jdtuck@sandia.gov>

**Description** Performs alignment, PCA, and modeling of multidimensional and unidimensional functions using the square-root velocity framework (Srivastava et al., 2011 <arXiv:1103.3817> and Tucker et al., 2014 <DOI:10.1016/j.csga.2012.12.001>). This framework allows for elastic analysis of functional data through phase and amplitude separation.

**License** GPL-3

**LazyData** TRUE

**SystemRequirements** C++11

**Imports** Rcpp (>= 0.12.1), coda, foreach, mvtnorm, matrixcalc, splines, parallel, fields, doParallel, viridisLite, tolerance, testthat

**Suggests** akima, plot3D, plot3Drgl, rgl

**LinkingTo** Rcpp, RcppArmadillo

**Depends** R (>= 3.1.0),

**RoxygenNote** 6.1.1

**Encoding** UTF-8

**NeedsCompilation** yes

**Repository** CRAN

**Date/Publication** 2019-07-31 19:20:08 UTC

---

`align_fPCA` *Group-wise function alignment and PCA Extractions*

---

## Description

This function aligns a collection of functions while extracting principal components.

## Usage

```
align_fPCA(f, time, num_comp = 3, showplot = T, smooth_data = FALSE,  
          sparam = 25, parallel = FALSE, cores = 8, MaxItr = 51)
```

## Arguments

<code>f</code>	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
<code>time</code>	vector of size $N$ describing the sample points
<code>num_comp</code>	number of principal components to extract (default = 3)
<code>showplot</code>	shows plots of functions (default = T)
<code>smooth_data</code>	smooth data using box filter (default = F)
<code>sparam</code>	number of times to apply box filter (default = 25)
<code>parallel</code>	enable parallel mode using <code>foreach</code> and <code>doParallel</code> package
<code>cores</code>	set number of cores to use with <code>doParallel</code> (default = 2)
<code>MaxItr</code>	maximum number of iterations

**Value**

Returns a list containing

<code>f0</code>	original functions
<code>fn</code>	aligned functions - matrix ( $N \times M$ ) of $M$ functions with $N$ samples
<code>qn</code>	aligned srvfs - similar structure to <code>fn</code>
<code>q0</code>	original srvfs - similar structure to <code>fn</code>
<code>mqn</code>	srvf mean - vector of length $N$
<code>gam</code>	warping functions - vector of length $N$
<code>Dx</code>	cost function
<code>vf_pca</code>	list containing
<code>q_pca</code>	srvf principal directions
<code>f_pca</code>	f principal directions
<code>latent</code>	latent values
<code>coef</code>	coefficients
<code>U</code>	eigenvectors

**References**

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

**Examples**

```
## Not run:
data("simu_data")
out = align_fPCA(simu_data$f, simu_data$time)

## End(Not run)
```

---

AmplitudeBoxplot

*Amplitude Boxplot*

---

**Description**

This function constructs the amplitude boxplot

**Usage**

```
AmplitudeBoxplot(warp_median, alpha = 0.05, ka = 1, showplot = TRUE)
```

**Arguments**

warp_median	fdawarp object from <a href="#">time_warping</a> of aligned data using the median
alpha	quantile value (default=.05, i.e., 95%)
ka	scalar for outlier cutoff (default=1)
showplot	shows plots of functions (default = T)

**Value**

Returns a ampbox object containing

median_y	median function
Q1	First quartile
Q3	Second quartile
Q1a	First quantile based on alpha
Q3a	Second quantile based on alpha
minn	minimum extreme function
maxx	maximum extreme function
outlier_index	indexes of outlier functions
fmedian	median function

**References**

Xie, W., S. Kurtek, K. Bharath, and Y. Sun (2016). "A Geometric Approach to Visualization of Variability in Functional Data." *Journal of the American Statistical Association* in press: 1-34.

**Examples**

```
data("simu_warp_median")
out <- AmplitudeBoxplot(simu_warp_median, showplot=FALSE)
```

---

 beta

---

*MPEG7 Curve Dataset*

---

**Description**

Contains the MPEG7 curve data set which is 20 curves in 65 classes. The array is structured with dimension (2,100,65,20)

**Usage**

```
data("mpeg7")
```

**Format**

an array of shape (2,100,65,20)

---

bootTB	<i>Tolerance Bound Calculation using Bootstrap Sampling</i>
--------	---

---

**Description**

This function computes tolerance bounds for functional data containing phase and amplitude variation using bootstrap sampling

**Usage**

```
bootTB(f, time, a = 0.05, p = 0.99, B = 500, no = 5,  
       parallel = T)
```

**Arguments**

f	matrix of functions
time	vector describing time sampling
a	confidence level of tolerance bound (default = 0.05)
p	coverage level of tolerance bound (default = 0.99)
B	number of bootstrap samples (default = 500)
no	number of principal components (default = 5)
parallel	enable parallel processing (default = T)

**Value**

Returns a list containing

amp	amplitude tolerance bounds
ph	phase tolerance bounds

**References**

Jung, S. L. a. S. (2016). "Combined Analysis of Amplitude and Phase Variations in Functional Data." arXiv:1603.01775 [stat.ME].

**Examples**

```
## Not run:  
  data("simu_data")  
  out1 = bootTB(simu_data$f, simu_data$time)  
  
## End(Not run)
```

---

calc_shape_dist	<i>Elastic Shape Distance</i>
-----------------	-------------------------------

---

**Description**

Calculate elastic shape distance between two curves beta1 and beta2

**Usage**

```
calc_shape_dist(beta1, beta2, mode = "O")
```

**Arguments**

beta1	array describing curve1 (n,T)
beta2	array describing curve
mode	Open ("O") or Closed ("C") curves

**Value**

d geodesic distance

**References**

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. Pattern Analysis and Machine Intelligence, IEEE Transactions on 33 (7), 1415-1428.

**Examples**

```
data("mpeg7")  
d = calc_shape_dist(beta[, ,1,1],beta[, ,1,4])
```

---

curve_geodesic	<i>Form geodesic between two curves</i>
----------------	---

---

**Description**

Form geodesic between two curves using Elastic Method

**Usage**

```
curve_geodesic(beta1, beta2, k = 5)
```

**Arguments**

beta1	array describing curve 1 (n,T)
beta2	array describing curve 2 (n,T)
k	number of curves along geodesic (default 5)

**Value**

a list containing	
geod	curves along geodesic (n,T,k)
geod_q	srvf's along geodesic

**References**

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

**Examples**

```
data("mpeg7")
out = curve_geodesic(beta[, ,1,1], beta[, ,1,5])
```

---

curve\_karcher\_cov      *Curve Karcher Covariance*

---

**Description**

Calculate Karcher Covariance of a set of curves

**Usage**

```
curve_karcher_cov(betamean, beta, mode = "O")
```

**Arguments**

betamean	array (n,T) of mean curve
beta	array (n,T,N) for N number of curves
mode	Open ("O") or Closed ("C") curves

**Value**

K covariance matrix

## References

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

## Examples

```
data("mpeg7")
out = curve_srvf_align(beta[, , 1, 1:2], maxit=2) # note: use more shapes, small for speed
K = curve_karcher_cov(out$betamean, beta[, , 1, 1:2])
```

---

curve\_karcher\_mean      *Karcher Mean of Curves*

---

## Description

Calculates Karcher mean of a collection of curves using the elastic square-root velocity (srvf) framework.

## Usage

```
curve_karcher_mean(beta, mode = "O", rotated = T, maxit = 20)
```

## Arguments

beta	array (n,T,N) for N number of curves
mode	Open ("O") or Closed ("C") curves
rotated	Optimize over rotation (default = T)
maxit	maximum number of iterations

## Value

Returns a list containing

mu	mean srvf
betamean	mean curve
v	shooting vectors
q	array of srvfs

## References

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

**Examples**

```
data("mpeg7")
out = curve_karcher_mean(beta[, , 1:2], maxit=2) # note: use more shapes, small for speed
```

---

curve_pair_align	<i>Pairwise align two curves</i>
------------------	----------------------------------

---

**Description**

This function aligns to curves using Elastic Framework

**Usage**

```
curve_pair_align(beta1, beta2)
```

**Arguments**

beta1	array describing curve 1 (n,T)
beta2	array describing curve 2 (n,T)

**Value**

	a list containing
beta2n	aligned curve 2 to 1
q2n	aligned srvf 2 to 1
gam	warping function
q1	srvf of curve 1

**References**

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

**Examples**

```
data("mpeg7")
out = curve_pair_align(beta[, , 1:1], beta[, , 1:5])
```

---

curve\_principal\_directions  
*Curve PCA*

---

## Description

Calculate principal directions of a set of curves

## Usage

```
curve_principal_directions(betamean, mu, K, mode = "O", no = 3,  
  N = 5)
```

## Arguments

betamean	array (n,T) of mean curve
mu	array (n,T) of mean srvf
K	array (2*T,2*T) covariance matrix
mode	Open ("O") or Closed ("C") curves
no	number of components
N	number of samples on each side of mean

## Value

pd list describing principal directions

## References

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

## Examples

```
data("mpeg7")  
out = curve_srvf_align(beta[, ,1,1:2],maxit=2) # note: use more shapes, small for speed  
K = curve_karcher_cov(out$betamean, beta[, ,1,1:2])  
pd = curve_principal_directions(out$betamean, out$sq_mu, K)
```

---

curve\_srvf\_align      *Align Curves*

---

### Description

Aligns a collection of curves using the elastic square-root velocity (srvf) framework.

### Usage

```
curve_srvf_align(beta, mode = "O", rotated = T, maxit = 20)
```

### Arguments

beta	array (n,T,N) for N number of curves
mode	Open ("O") or Closed ("C") curves
rotated	Optimize over rotation (default = T)
maxit	maximum number of iterations

### Value

Returns a list containing

betan	aligned curves
qn	aligned srvfs
betamean	mean curve
q_mu	mean SRVFs

### References

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

### Examples

```
data("mpeg7")
out = curve_srvf_align(beta[, , 1:2], maxit=2) # note: use more shapes, small for speed
K = curve_karcher_cov(out$betamean, beta[, , 1:2])
```

---

curve_to_q	<i>Convert to SRVF space</i>
------------	------------------------------

---

**Description**

This function converts curves to SRVF

**Usage**

```
curve_to_q(beta)
```

**Arguments**

beta                    array describing curve (n,T)

**Value**

q array describing srvf

**References**

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

**Examples**

```
data("mpeg7")
q = curve_to_q(beta[, , 1])
```

---

elastic.distance	<i>Calculates two elastic distance</i>
------------------	--

---

**Description**

This functions calculates the distances between functions,  $D_y$  and  $D_x$ , where function 1 is aligned to function 2

**Usage**

```
elastic.distance(f1, f2, time, lambda = 0)
```

**Arguments**

f1                    sample function 1  
 f2                    sample function 2  
 time                  sample points of functions  
 lambda                controls amount of warping (default = 0)

**Value**

Returns a list containing

Dy	amplitude distance
Dx	phase distance

**References**

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

**Examples**

```
data("simu_data")
distances <- elastic.distance(simu_data$f[,1],simu_data$f[,2],simu_data$time)
```

---

elastic.logistic      *Elastic Logistic Regression*

---

**Description**

This function identifies a logistic regression model with phase-variability using elastic methods

**Usage**

```
elastic.logistic(f, y, time, B = NULL, df = 20, max_itr = 20,
  smooth_data = FALSE, sparam = 25, parallel = FALSE, cores = 2)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
y	vector of size $M$ labels (1/-1)
time	vector of size $N$ describing the sample points
B	matrix defining basis functions (default = NULL)
df	scalar controlling degrees of freedom if B=NULL (default=20)
max_itr	scalar number of iterations (default=20)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using <a href="#">foreach</a> and <a href="#">doParallel</a> package
cores	set number of cores to use with <a href="#">doParallel</a> (default = 2)

**Value**

Returns a list containing

alpha	model intercept
beta	regressor function
fn	aligned functions - matrix ( $N \times M$ ) of $M$ functions with $N$ samples
qn	aligned srvfs - similar structure to fn
gamma	warping functions - similar structure to fn
q	original srvf - similar structure to fn
B	basis matrix
b	basis coefficients
Loss	logistic loss
type	model type ('logistic')

---

elastic.lpcr.regression

*Elastic Logistic Prinipcal Component Regression*

---

**Description**

This function identifies a logistic regression model with phase-variability using elastic pca

**Usage**

```
elastic.lpcr.regression(f, y, time, pca.method = "combined", no = 5,
  smooth_data = FALSE, sparam = 25)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
y	vector of size $M$ lables
time	vector of size $N$ describing the sample points
pca.method	string specifying pca method (options = "combined", "vert", or "horiz", default = "combined")
no	scalar specify number of principal components (default=5)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)

**Value**

Returns a lpcr object containing

alpha	model intercept
b	regressor vector
y	label vector
warp_data	fdawarp object of aligned data
pca	pca object of principal components
Loss	logistic loss
pca.method	string specifying pca method used

**References**

---

elastic.mlogistic      *Elastic Multinomial Logistic Regression*

---

**Description**

This function identifies a multinomial logistic regression model with phase-variability using elastic methods

**Usage**

```
elastic.mlogistic(f, y, time, B = NULL, df = 20, max_itr = 20,
  smooth_data = FALSE, sparam = 25, parallel = FALSE, cores = 2)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
y	vector of size $M$ labels 1,2,...,m for m classes
time	vector of size $N$ describing the sample points
B	matrix defining basis functions (default = NULL)
df	scalar controlling degrees of freedom if B=NULL (default=20)
max_itr	scalar number of iterations (default=20)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using <a href="#">foreach</a> and doParallel package
cores	set number of cores to use with doParallel (default = 2)

**Value**

Returns a list containing

alpha	model intercept
beta	regressor function
fn	aligned functions - matrix ( $N \times M$ ) of $M$ functions with $N$ samples
qn	aligned srvfs - similar structure to fn
gamma	warping functions - similar structure to fn
q	original srvf - similar structure to fn
B	basis matrix
b	basis coefficients
Loss	logistic loss
type	model type ('mlogistic')

**References**

Tucker, J. D., Wu, W., Srivastava, A., Elastic Functional Logistic Regression with Application to Physiological Signal Classification, Electronic Journal of Statistics (2014), submitted.

---

elastic.mlpcr.regression

*Elastic Multinomial Logisitc Prinipcal Component Regression*

---

**Description**

This function identifies a multinomial logistic regression model with phase-variability using elastic pca

**Usage**

```
elastic.mlpcr.regression(f, y, time, pca.method = "combined", no = 5,
  smooth_data = FALSE, sparam = 25)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
y	vector of size $M$ labels
time	vector of size $N$ describing the sample points
pca.method	string specifying pca method (options = "combined", "vert", or "horiz", default = "combined")
no	scalar specify number of principal components (default=5)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)

**Value**

Returns a mlpcr object containing

alpha	model intercept
b	regressor vector
y	label vector
Y	Coded labels
warp_data	fdawarp object of aligned data
pca	pca object of principal components
Loss	logistic loss
pca.method	string specifying pca method used

**References**

J. D. Tucker, J. R. Lewis, and A. Srivastava, "Elastic Functional Principal Component Regression," *Statistical Analysis and Data Mining*, 10.1002/sam.11399, 2018.

---

elastic.pcr.regression

*Elastic Linear Prinipcal Component Regression*

---

**Description**

This function identifies a regression model with phase-variability using elastic pca

**Usage**

```
elastic.pcr.regression(f, y, time, pca.method = "combined", no = 5,
  smooth_data = FALSE, sparam = 25, parallel = F, C = NULL)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
y	vector of size $M$ responses
time	vector of size $N$ describing the sample points
pca.method	string specifying pca method (options = "combined", "vert", or "horiz", default = "combined")
no	scalar specify number of principal components (default=5)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	run in parallel (default = F)
C	scale balance parameter for combined method (default = NULL)

**Value**

Returns a pcr object containing

alpha	model intercept
b	regressor vector
y	response vector
warp_data	fdawarp object of aligned data
pca	pca object of principal components
SSE	sum of squared errors
pca.method	string specifying pca method used

**References**

J. D. Tucker, J. R. Lewis, and A. Srivastava, "Elastic Functional Principal Component Regression," *Statistical Analysis and Data Mining*, 10.1002/sam.11399, 2018.

---

elastic.prediction      *Elastic Prediction from Regression Models*

---

**Description**

This function performs prediction from an elastic regression model with phase-variability

**Usage**

```
elastic.prediction(f, time, model, y = NULL, smooth_data = FALSE,
  sparam = 25)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
time	vector of size $N$ describing the sample points
model	list describing model from elastic regression methods
y	responses of test matrix f (default=NULL)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)

**Value**

Returns a list containing

y_pred	predicted values of f or probabilities depending on model
SSE	sum of squared errors if linear
y_labels	labels if logistic model
PC	probability of classification if logistic

## References

Tucker, J. D., Wu, W., Srivastava, A., Elastic Functional Logistic Regression with Application to Physiological Signal Classification, Electronic Journal of Statistics (2014), submitted.

---

elastic.regression      *Elastic Linear Regression*

---

## Description

This function identifies a regression model with phase-variability using elastic methods

## Usage

```
elastic.regression(f, y, time, B = NULL, lam = 0, df = 20,
  max_itr = 20, smooth_data = FALSE, sparam = 25, parallel = FALSE,
  cores = 2)
```

## Arguments

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
y	vector of size $M$ responses
time	vector of size $N$ describing the sample points
B	matrix defining basis functions (default = NULL)
lam	scalar regularization parameter (default=0)
df	scalar controlling degrees of freedom if B=NULL (default=20)
max_itr	scalar number of iterations (default=20)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using <code>foreach</code> and <code>doParallel</code> package
cores	set number of cores to use with <code>doParallel</code> (default = 2)

## Value

Returns a list containing

alpha	model intercept
beta	regressor function
fn	aligned functions - matrix ( $N \times M$ ) of $M$ functions with $N$ samples
qn	aligned srvfs - similar structure to fn
gamma	warping functions - similar structure to fn
q	original srvf - similar structure to fn
B	basis matrix
b	basis coefficients
SSE	sum of squared errors
ttype	model type ('linear')

## Description

A library for functional data analysis using the square root velocity framework which performs pair-wise and group-wise alignment as well as modeling using functional component analysis

## References

function\_group\_warp\_bayes

*Bayesian Group Warping*

---

## Description

This function aligns a set of functions using Bayesian SRSF framework

## Usage

```
function_group_warp_bayes(f, time, iter = 50000, powera = 1,
  times = 5, tau = ceiling(times * 0.04), gp = seq(dim(f)[2]),
  showplot = TRUE)
```

## Arguments

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
time	sample points of functions
iter	number of iterations (default = 150000)
powera	Dirchelet prior parameter (default 1)
times	factor of length of subsample points to look at (default = 5)
tau	standard deviation of Normal prior for increment (default $\text{ceil}(\text{times} * .4)$ )
gp	number of colors in plots (default $\text{seq}(\text{dim}(f)[2])$ )
showplot	shows plots of functions (default = T)

## Value

Returns a list containing

f0	original functions
f_q	f aligned quotient space
gam_q	warping functions quotient space
f_a	f aligned ambient space
gam_a	warping ambient space
qmn	mean srsf

**References**

Cheng, W., Dryden, I. L., and Huang, X. (2016). Bayesian registration of functions and curves. *Bayesian Analysis*, 11(2), 447-475.

**Examples**

```
## Not run:
data("simu_data")
out = function_group_warp_bayes(simu_data$f, simu_data$time)

## End(Not run)
```

---

function\_mean\_bayes     *Bayesian Karcher Mean Calculation*

---

**Description**

This function calculates karcher mean of functions using Bayesian method

**Usage**

```
function_mean_bayes(f, time, times = 5, group = 1:dim(f)[2],
  showplot = TRUE)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
time	sample points of functions
times	factor of length of subsample points to look at (default = 5)
group	(default 1:dim(f)[2])
showplot	shows plots of functions (default = T)

**Value**

Returns a list containing

distfamily	dist matrix
match.matrix	matrix of warping functions
position	position
mu_5	function mean
rtmatrix	rtmatrix
sumdist	sumdist
qt.fitted	aligned srsf functions
estimator	estimator
estimator2	estimator2
regfuncs	registered functions

## References

Cheng, W., Dryden, I. L., and Huang, X. (2016). Bayesian registration of functions and curves. *Bayesian Analysis*, 11(2), 447-475.

## Examples

```
## Not run:  
data("simu_data")  
out = function_mean_bayes(simu_data$f, simu_data$time)  
  
## End(Not run)
```

---

f\_to\_srvf

*Convert to SRSF*

---

## Description

This function converts functions to srsf

## Usage

```
f_to_srvf(f, time)
```

## Arguments

f	matrix of functions
time	time

## Value

q matrix of SRSFs

## References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

## Examples

```
data("simu_data")  
q <- f_to_srvf(simu_data$f, simu_data$time)
```

---

gauss_model	<i>Gaussian model of functional data</i>
-------------	--

---

### Description

This function models the functional data using a Gaussian model extracted from the principal components of the srvfs

### Usage

```
gauss_model(warp_data, n = 1, sort_samples = FALSE)
```

### Arguments

warp_data	fdawarp object from <a href="#">time_warping</a> of aligned data
n	number of random samples (n = 1)
sort_samples	sort samples (default = F)

### Value

Returns a fdawarp object containing

fs	random aligned samples
gams	random warping function samples
ft	random function samples

### References

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

### Examples

```
data("simu_warp")  
out1 = gauss_model(simu_warp, n = 10)
```

---

gradient	<i>Gradient using finite differences</i>
----------	--

---

**Description**

This function takes the gradient of  $f$  using finite differences

**Usage**

```
gradient(f, binsize)
```

**Arguments**

$f$	vector with $N$ samples
binsize	scalar of time samples

**Value**

$g$  vector with  $N$  samples which is the gradient of  $f$

**Examples**

```
data("simu_data")
out = gradient(simu_data$f[,1],mean(diff(simu_data$time)))
```

---

growth_vel	<i>Berkley Growth Velocity Dataset</i>
------------	--

---

**Description**

Combination of both boys and girls growth velocity from the Berkley Dataset

**Usage**

```
data("growth_vel")
```

**Format**

A list which contains  $f$  and time

---

`horizFPCA`*Horizontal Functional Principal Component Analysis*

---

**Description**

This function calculates vertical functional principal component analysis on aligned data

**Usage**

```
horizFPCA(warp_data, no, showplot = TRUE)
```

**Arguments**

<code>warp_data</code>	fdawarp object from <a href="#">time_warping</a> of aligned data
<code>no</code>	number of principal components to extract
<code>showplot</code>	show plots of principal directions (default = T)

**Value**

Returns a hfPCA object containing

<code>gam_pca</code>	warping functions principal directions
<code>psi_pca</code>	srvf principal directions
<code>latent</code>	latent values
<code>U</code>	eigenvectors
<code>vec</code>	shooting vectors
<code>mu</code>	Karcher Mean

**References**

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

**Examples**

```
data("simu_warp")
hfPCA = horizFPCA(simu_warp, no = 3)
```

im *Example Image Data set*

---

**Description**

Contains two simulated images for registration

**Usage**

```
data("image")
```

**Format**

a list containing two images of dimension (64,64)

---

invertGamma *Invert Warping Function*

---

**Description**

This function calculates the inverse of gamma

**Usage**

```
invertGamma(gam)
```

**Arguments**

gam                    vector of  $N$  samples

**Value**

Returns gamI inverted vector

**References**

**Examples**

```
data("simu_warp")
out = invertGamma(simu_warp$gam[,1])
```

---

jointFPCA	<i>Joint Vertical and Horizontal Functional Principal Component Analysis</i>
-----------	--

---

### Description

This function calculates amplitude and phase joint functional principal component analysis on aligned data

### Usage

```
jointFPCA(warp_data, no, id = round(length(warp_data$time)/2),
          C = NULL, showplot = T)
```

### Arguments

warp_data	fdawarp object from <a href="#">time_warping</a> of aligned data
no	number of principal components to extract
id	integration point for $f_0$ (default = midpoint)
C	balance value (default = NULL)
showplot	show plots of principal directions (default = T)

### Value

Returns a list containing

q_pca	svf principal directions
f_pca	f principal directions
latent	latent values
coef	coefficients
U	eigenvectors
mu_psi	mean psi function
mu_g	mean g function
id	point use for $f(0)$
C	optimized phase amplitude ratio

**Examples**

```
data("simu_warp")
data("simu_data")
jfpca = jointFPCA(simu_warp, no = 3)
```

---

joint_gauss_model	<i>Gaussian model of functional data using joint Model</i>
-------------------	--

---

**Description**

This function models the functional data using a Gaussian model extracted from the principal components of the srvfs using the joint model

**Usage**

```
joint_gauss_model(warp_data, n = 1, no = 5)
```

**Arguments**

warp_data	fdawarp object from <a href="#">time_warping</a> of aligned data
n	number of random samples (n = 1)
no	number of principal components (n=4)

**Value**

Returns a fdawarp object containing

fs	random aligned samples
gams	random warping function samples
ft	random function samples
qs	random srvf samples

**References**

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

Jung, S. L. a. S. (2016). "Combined Analysis of Amplitude and Phase Variations in Functional Data." arXiv:1603.01775 [stat.ME].

**Examples**

```
data("simu_warp")
out1 = joint_gauss_model(simu_warp, n = 10)
```

**Description**

This function clusters functions and aligns using the elastic square-root slope (srsf) framework.

**Usage**

```
kmeans_align(f, time, K, seeds = NULL, lambda = 0, showplot = TRUE,
  smooth_data = FALSE, sparam = 25, parallel = FALSE,
  alignment = TRUE, omethod = "DP", MaxItr = 50, thresh = 0.01)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
time	vector of size $N$ describing the sample points
K	number of clusters
seeds	indexes of cluster center functions (default = NULL)
lambda	controls the elasticity (default = 0)
showplot	shows plots of functions (default = T)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using <code>foreach</code> and <code>doParallel</code> package (default=F)
alignment	whether to perform alignment (default = T)
omethod	optimization method (DP,DP2,RBFGS)
MaxItr	maximum number of iterations
thresh	cost function threshold

**Value**

Returns a fdakma object containing

f0	original functions
fn	aligned functions - matrix ( $N \times M$ ) of $M$ functions with $N$ samples which is a list for each cluster
qn	aligned SRSFs - similar structure to fn
q0	original SRSFs
labels	cluster labels
templates	cluster center functions
templates.q	cluster center SRSFs
gam	warping functions - similar structure to fn
qun	Cost Function Value

## Examples

```
## Not run:
data("growth_vel")
out <- kmeans_align(growth_vel$f,growth_vel$time, K=2)

## End(Not run)
```

---

multiple\_align\_functions

*Group-wise function alignment to specified mean*

---

## Description

This function aligns a collection of functions using the elastic square-root slope (srsf) framework.

## Usage

```
multiple_align_functions(f, time, mu, lambda = 0, showplot = TRUE,
  smooth_data = FALSE, sparam = 25, parallel = FALSE,
  omethod = "DP", MaxItr = 20, iter = 2000)
```

## Arguments

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
time	vector of size $N$ describing the sample points
mu	vector of size $N$ that $f$ is aligned to
lambda	controls the elasticity (default = 0)
showplot	shows plots of functions (default = T)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using <code>foreach</code> and <code>doParallel</code> package (default=F)
omethod	optimization method (DP,DP2,RBFGS,dBayes,expBayes)
MaxItr	maximum number of iterations
iter	bayesian number of mcmc samples (default 2000)

**Value**

Returns a fdawarp object containing

<code>f0</code>	original functions
<code>fn</code>	aligned functions - matrix ( $N \times M$ ) of $M$ functions with $N$ samples
<code>qn</code>	aligned SRSFs - similar structure to <code>fn</code>
<code>q0</code>	original SRSF - similar structure to <code>fn</code>
<code>fmean</code>	function mean or median - vector of length $N$
<code>mqn</code>	SRSF mean or median - vector of length $N$
<code>gam</code>	warping functions - similar structure to <code>fn</code>
<code>orig.var</code>	Original Variance of Functions
<code>amp.var</code>	Amplitude Variance
<code>phase.var</code>	Phase Variance
<code>qun</code>	Cost Function Value

---

optimum.reparam      *Align two functions*

---

**Description**

This function aligns two SRSF functions using Dynamic Programming

**Usage**

```
optimum.reparam(Q1, T1, Q2, T2, lambda = 0, method = "DP", w = 0.01,
  f1o = 0, f2o = 0)
```

**Arguments**

<code>Q1</code>	srsf of function 1
<code>T1</code>	sample points of function 1
<code>Q2</code>	srsf of function 2
<code>T2</code>	sample points of function 2
<code>lambda</code>	controls amount of warping (default = 0)
<code>method</code>	controls which optimization method (default="DP") options are Dynamic Programming ("DP"), Coordinate Descent ("DP2"), and Riemannian BFGS ("RBFGS")

w	controls LRBFGS (default = 0.01)
f1o	initial value of f1, vector or scalar depending on q1, defaults to zero
f2o	initial value of f2, vector or scalar depending on q1, defaults to zero

**Value**

gam warping function

**References**

**Examples**

```
data("simu_data")
q = f_to_srvf(simu_data$f, simu_data$time)
gam = optimum.reparam(q[,1], simu_data$time, q[,2], simu_data$time)
```

---

outlier.detection      *Outlier Detection*

---

**Description**

This function calculates outlier's using geodesic distances of the SRVFs from the median

**Usage**

```
outlier.detection(q, time, mq, k = 1.5)
```

**Arguments**

q	matrix ( $N \times M$ ) of $M$ SRVF functions with $N$ samples
time	vector of size $N$ describing the sample points
mq	median calculated using <a href="#">time_warping</a>
k	cutoff threshold (default = 1.5)

**Value**

q\_outlier      outlier functions

## References

## Examples

```
data("toy_data")
data("toy_warp")
q_outlier = outlier.detection(toy_warp$q0, toy_data$time, toy_warp$mqn, k=.1)
```

---

pair\_align\_functions *Align two functions*

---

## Description

This function aligns two functions using SRSF framework. It will align f2 to f1

## Usage

```
pair_align_functions(f1, f2, time, lambda = 0, method = "DP",
  w = 0.01, iter = 2000)
```

## Arguments

f1	function 1
f2	function 2
time	sample points of functions
lambda	controls amount of warping (default = 0)
method	controls which optimization method (default="DP") options are Dynamic Programming ("DP"), Coordinate Descent ("DP2"), Riemannian BFGS ("RBFSGS"), Simultaneous Alignment ("SIMUL"), Dirchelet Bayesian ("dBayes"), and Expo-Map Bayesian ("expBayes")
w	controls LRBFSGS (default = 0.01)
iter	number of mcmc iterations for mcmc method (default 2000)

## Value

Returns a list containing

f2tilde	aligned f2
gam	warping function

## References

## Description

This function aligns two functions using Bayesian SRSF framework. It will align f2 to f1

## Usage

```
pair_align_functions_bayes(f1, f2, timet, iter = 15000, times = 5,
  tau = ceiling(times * 0.4), powera = 1, showplot = TRUE,
  extrainfo = FALSE)
```

## Arguments

f1	function 1
f2	function 2
timet	sample points of functions
iter	number of iterations (default = 15000)
times	factor of length of subsample points to look at (default = 5)
tau	standard deviation of Normal prior for increment (default ceil(times*.4))
powera	Dirchelet prior parameter (default 1)
showplot	shows plots of functions (default = T)
extrainfo	T/F whether additional information is returned

**Value**

Returns a list containing

f1	function 1
f2_q	registered function using quotient space
gam_q	warping function quotient space
f2_a	registered function using ambient space
q2_a	warping function ambient space
match_collect	posterior samples from warping function (returned if extrainfo=TRUE)
dist_collect	posterior samples from the distances (returned if extrainfo=TRUE)
kappa_collect	posterior samples from kappa (returned if extrainfo=TRUE)
log_collect	log-likelihood of each sample (returned if extrainfo=TRUE)
pct_accept	vector of acceptance ratios for the warping function (returned if extrainfo=TRUE)

**References**

out = pair_align_functions_bayes(simu_data$f[,1], simu_data$f[,2], simu_data$time)
```

---

pair\_align\_functions\_expomap

*Align two functions using geometric properties of warping functions*

---

**Description**

This function aligns two functions using Bayesian framework. It will align f2 to f1. It is based on mapping warping functions to a hypersphere, and a subsequent exponential mapping to a tangent space. In the tangent space, the Z-mixture pCN algorithm is used to explore both local and global structure in the posterior distribution.

**Usage**

```
pair_align_functions_expomap(f1, f2, timet, iter = 20000,
  burnin = min(5000, iter/2), alpha0 = 0.1, beta0 = 0.1,
  zpcn = list(betas = c(0.5, 0.05, 0.005, 1e-04), probs = c(0.1, 0.1,
  0.7, 0.1)), propvar = 1, init.coef = rep(0, 2 * 10), npoints = 200,
  extrainfo = FALSE)
```

**Arguments**

<code>f1</code>	observed data, numeric vector
<code>f2</code>	observed data, numeric vector
<code>timet</code>	sample points of functions
<code>iter</code>	length of the chain
<code>burnin</code>	number of burnin MCMC iterations
<code>alpha0, beta0</code>	IG parameters for the prior of $\sigma_1$
<code>zpcn</code>	list of mixture coefficients and prior probabilities for Z-mixture pCN algorithm of the form <code>list(betas, probs)</code> , where <code>betas</code> and <code>probs</code> are numeric vectors of equal length
<code>propvar</code>	variance of proposal distribution
<code>init.coef</code>	initial coefficients of warping function in exponential map; length must be even
<code>npoints</code>	number of sample points to use during alignment
<code>extrainfo</code>	T/F whether additional information is returned

**Details**

The Z-mixture pCN algorithm uses a mixture distribution for the proposal distribution, controlled by input parameter `zpcn`. The `zpcn$betas` must be between 0 and 1, and are the coefficients of the mixture components, with larger coefficients corresponding to larger shifts in parameter space. The `zpcn$probs` give the probability of each shift size.

**Value**

Returns a list containing

<code>f2_warped</code>	<code>f2</code> aligned to <code>f1</code>
<code>gamma</code>	Posterior mean gamma function
<code>g.coef</code>	matrix with <code>iter</code> columns, posterior draws of <code>g.coef</code>
<code>psi</code>	Posterior mean psi function
<code>sigma1</code>	numeric vector of length <code>iter</code> , posterior draws of $\sigma_1$
<code>accept</code>	Boolean acceptance for each sample (if <code>extrainfo=TRUE</code> )
<code>betas.ind</code>	Index of <code>zpcn</code> mixture component for each sample (if <code>extrainfo=TRUE</code> )
<code>logl</code>	numeric vector of length <code>iter</code> , posterior loglikelihood (if <code>extrainfo=TRUE</code> )
<code>gamma_mat</code>	Matrix of all posterior draws of gamma (if <code>extrainfo=TRUE</code> )
<code>gamma_q025</code>	Lower 0.025 quantile of gamma (if <code>extrainfo=TRUE</code> )
<code>gamma_q975</code>	Upper 0.975 quantile of gamma (if <code>extrainfo=TRUE</code> )
<code>sigma_eff_size</code>	Effective sample size of sigma (if <code>extrainfo=TRUE</code> )
<code>psi_eff_size</code>	Vector of effective sample sizes of psi (if <code>extrainfo=TRUE</code> )
<code>xdist</code>	Vector of posterior draws from <code>xdist</code> between registered functions (if <code>extrainfo=TRUE</code> )
<code>ydist</code>	Vector of posterior draws from <code>ydist</code> between registered functions (if <code>extrainfo=TRUE</code> )

## Examples

```
## Not run:
# This is a mcmc algorithm and takes a long time to run
data("simu_data")
myzpcn <- list(betas = c(0.1, 0.01, 0.005, 0.0001),
  probs = c(0.2, 0.2, 0.4, 0.2))
out = pair_align_functions_expomap(simu_data$f[,1], simu_data$f[,2],
  timet = simu_data$time, zpcn = myzpcn, extrainfo = TRUE)
# overall acceptance ratio
mean(out$accept)
# acceptance ratio by zpcn coefficient
with(out, tapply(accept, myzpcn$betas[betas.ind], mean))
## End(Not run)
```

---

pair_align_image	<i>Pairwise align two images This function aligns to images using the q-map framework</i>
------------------	---

---

## Description

Pairwise align two images This function aligns to images using the q-map framework

## Usage

```
pair_align_image(I1, I2, M = 5, ortho = TRUE, basis_type = "t",
  resizei = FALSE, N = 64, stepsize = 1e-05, itermax = 1000)
```

## Arguments

I1	reference image
I2	image to warp
M	number of basis elements (default=5)
ortho	orthonormalize basis (default=TRUE)
basis_type	("t","s","i","o"; default="t")
resizei	resize image (default=TRUE)
N	size of resized image (default=64)
stepsize	gradient stepsize (default=1e-5)
itermax	maximum number of iterations (default=1000)

**Value**

Returns a list containing

Inew	aligned I2
gam	warping function

**References**

Q. Xie, S. Kurtek, E. Klassen, G. E. Christensen and A. Srivastava. Metric-based pairwise and multiple image registration. IEEE European Conference on Computer Vision (ECCV), September, 2014

**Examples**

```
## Not run:
# This is a gradient descent algorithm and takes a long time to run
data("image")
out <- pair_align_image(im$I1, im$I2)
## End(Not run)
```

---

pcaTB

*Tolerance Bound Calculation using Elastic Functional PCA*

---

**Description**

This function computes tolerance bounds for functional data containing phase and amplitude variation using principal component analysis

**Usage**

```
pcaTB(f, time, m = 4, B = 1e+05, a = 0.05, p = 0.99)
```

**Arguments**

f	matrix of functions
time	vector describing time sampling
m	number of principal components (default = 4)
B	number of monte carlo iterations
a	confidence level of tolerance bound (default = 0.05)
p	coverage level of tolerance bound (default = 0.99)

**Value**

Returns a list containing

pca	pca output
tol	tolerance factor

## Examples

```
## Not run:
  data("simu_data")
  out1 = pcaTB(simu_data$f, simu_data$time)

## End(Not run)
```

---

PhaseBoxplot

*Phase Boxplot*

---

## Description

This function constructs the amplitude boxplot

## Usage

```
PhaseBoxplot(warp_median, alpha = 0.05, kp = 1, showplot = TRUE)
```

## Arguments

warp_median	fdawarp object from <a href="#">time_warping</a> of aligned data using the median
alpha	quantile value (default=.05, i.e., 95%)
kp	scalar for outlier cutoff (default=1)
showplot	shows plots of functions (default = T)

## Value

Returns a phbox object containing

median_x	median warping function
Q1	First quartile
Q3	Second quartile
Q1a	First quartile based on alpha
Q3a	Second quartile based on alpha
minn	minimum extreme function
maxx	maximum extreme function
outlier_index	indexes of outlier functions

**Examples**

```
data("simu_warp_median")
out <- PhaseBoxplot(simu_warp_median, showplot=FALSE)
```

---

predict.lpcr

*Elastic Prediction for functional logisitic PCR Model*

---

**Description**

This function performs prediction from an elastic logistic fPCR regression model with phase-variability

**Usage**

```
## S3 method for class 'lpcr'
predict(object, newdata = NULL, y = NULL, ...)
```

**Arguments**

object	Object of class inheriting from "elastic.pcr.regression"
newdata	An optional matrix in which to look for variables with which to predict. If omitted, the fitted values are used.
y	An optional vector of labels to calculate PC. If omitted, PC is NULL
...	additional arguments affecting the predictions produced

**Value**

Returns a list containing

y_pred	predicted probabilities of the class of newdata
y_labels	class labels of newdata
PC	probability of classification

**References**

J. D. Tucker, J. R. Lewis, and A. Srivastava, "Elastic Functional Principal Component Regression," *Statistical Analysis and Data Mining*, 10.1002/sam.11399, 2018.

---

`predict.mlpcr`*Elastic Prediction for functional multinomial logistic PCR Model*

---

## Description

This function performs prediction from an elastic multinomial logistic fPCR regression model with phase-variability

## Usage

```
## S3 method for class 'mlpcr'  
predict(object, newdata = NULL, y = NULL, ...)
```

## Arguments

<code>object</code>	Object of class inheriting from "elastic.pcr.regression"
<code>newdata</code>	An optional matrix in which to look for variables with which to predict. If omitted, the fitted values are used.
<code>y</code>	An optional vector of labels to calculate PC. If omitted, PC is NULL
<code>...</code>	additional arguments affecting the predictions produced

## Value

Returns a list containing

<code>y_pred</code>	predicted probabilities of the class of newdata
<code>y_labels</code>	class labels of newdata
<code>PC</code>	probability of classification per class
<code>PC.comb</code>	total probability of classification

## References

---

predict.pcr                      *Elastic Prediction for functional PCR Model*

---

### Description

This function performs prediction from an elastic pcr regression model with phase-variability

### Usage

```
## S3 method for class 'pcr'
predict(object, newdata = NULL, y = NULL, ...)
```

### Arguments

object	Object of class inheriting from "elastic.pcr.regression"
newdata	An optional matrix in which to look for variables with which to predict. If omitted, the fitted values are used.
y	An optional vector of responses to calculate SSE. If omitted, SSE is NULL
...	additional arguments affecting the predictions produced

### Value

Returns a list containing

y_pred	predicted values of newdata
SSE	sum of squared errors

### References

J. D. Tucker, J. R. Lewis, and A. Srivastava, "Elastic Functional Principal Component Regression," *Statistical Analysis and Data Mining*, 10.1002/sam.11399, 2018.

---

q\_to\_curve                      *Convert to curve space*

---

### Description

This function converts SRVFs to curves

### Usage

```
q_to_curve(q)
```

### Arguments

q	array describing SRVF (n,T)
---	-----------------------------

**Value**

beta array describing curve

**References**

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

**Examples**

```
data("mpeg7")
q = curve_to_q(beta[, , 1, 1])
beta1 = q_to_curve(q)
```

---

reparam\_curve

*Align two curves*

---

**Description**

This function aligns two SRVF functions using Dynamic Programming

**Usage**

```
reparam_curve(beta1, beta2, lambda = 0, method = "DP", w = 0.01,
  rotated = T, isclosed = F, mode = "O")
```

**Arguments**

beta1	array defining curve 1
beta2	array defining curve 1
lambda	controls amount of warping (default = 0)
method	controls which optimization method (default="DP") options are Dynamic Programming ("DP"), Coordinate Descent ("DP2"), Riemannian BFGS ("RBFSGS")
w	controls LRBFSGS (default = 0.01)
rotated	boolean if rotation is desired
isclosed	boolean if curve is closed
mode	Open ("O") or Closed ("C") curves

**Value**

return a List containing

gam	warping function
R	rotation matrix
tau	seed point

## References

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

## Examples

```
data("mpeg7")
gam = reparam_curve(beta[, ,1,1],beta[, ,1,5])$gam
```

---

reparam\_image

*Find optimum reparameterization between two images*

---

## Description

Finds the optimal warping function between two images using the elastic framework

## Usage

```
reparam_image(It, Im, gam, b, stepsize = 1e-05, itermax = 1000,
  lmark = FALSE)
```

## Arguments

It	template image matrix
Im	test image matrix
gam	initial warping array
b	basis matrix
stepsize	gradient stepsize (default=1e-5)
itermax	maximum number of iterations (default=1000)
lmark	use landmarks (default=FALSE)

## Value

Returns a list containing

gamnew	final warping
Inew	aligned image
H	energy
stepsize	final stepsize

## References

---

resamplecurve	<i>Resample Curve</i>
---------------	-----------------------

---

**Description**

This function resamples a curve to a number of points

**Usage**

```
resamplecurve(x, N = 100, mode = "O")
```

**Arguments**

x	matrix defining curve (n,T)
N	Number of samples to re-sample curve, N usually is > T
mode	Open ("O") or Closed ("C") curves

**Value**

xn matrix defining resampled curve

**References**

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. Pattern Analysis and Machine Intelligence, IEEE Transactions on 33 (7), 1415-1428.

**Examples**

```
data("mpeg7")  
xn = resamplecurve(beta[, ,1,1],200)
```

---

rgam	<i>Random Warping</i>
------	-----------------------

---

**Description**

Generates random warping functions

**Usage**

```
rgam(N, sigma, num)
```

**Arguments**

N	length of warping function
sigma	variance of warping functions
num	number of warping functions

**Value**

gam warping functions

**References**

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

**Examples**

```
gam = rgam(N=101, sigma=.01, num=35)
```

---

sample_shapes	<i>Sample shapes from model</i>
---------------	---------------------------------

---

**Description**

Sample shapes from model

**Usage**

```
sample_shapes(mu, K, mode = "O", no = 3, numSamp = 10)
```

**Arguments**

mu	array (n,T) of mean srvf
K	array (2*T,2*T) covariance matrix
mode	Open ("O") or Closed ("C") curves
no	number of principal components
numSamp	number of samples

**Value**

samples list of sample curves

## References

Srivastava, A., Klassen, E., Joshi, S., Jermyn, I., (2011). Shape analysis of elastic curves in euclidean spaces. *Pattern Analysis and Machine Intelligence, IEEE Transactions on* 33 (7), 1415-1428.

## Examples

```
data("mpeg7")
out = curve_srvf_align(beta[, , 1, 1:2], maxit=2) # note: use more shapes, small for speed
K = curve_karcher_cov(out$betamean, beta[, , 1, 1:2])
samples = sample_shapes(out$q_mu, K)
```

---

simu_data	<i>Simulated two Gaussian Dataset</i>
-----------	---------------------------------------

---

## Description

A functional dataset where the individual functions are given by:  $y_i(t) = z_{i,1}e^{-(t-1.5)^2/2} + z_{i,2}e^{-(t+1.5)^2/2}$ ,  $t \in [-3, 3]$ ,  $i = 1, 2, \dots, 21$ , where  $z_{i,1}$  and  $z_{i,2}$  are *i.i.d.* normal with mean one and standard deviation 0.25. Each of these functions is then warped according to:  $\gamma_i(t) = 6\left(\frac{e^{a_i(t+3)/6}-1}{e^{a_i}-1}\right) - 3$  if  $a_i \neq 0$ , otherwise  $\gamma_i = \gamma_{id}$  ( $\gamma_{id}(t) = t$  is the identity warping). The variables are as follows: f containing the 21 functions of 101 samples and time which describes the sampling

## Usage

```
data("simu_data")
```

## Format

A list which contains f and time

---

simu_warp	<i>Aligned Simulated two Gaussian Dataset</i>
-----------	---

---

## Description

A functional dataset where the individual functions are given by:  $y_i(t) = z_{i,1}e^{-(t-1.5)^2/2} + z_{i,2}e^{-(t+1.5)^2/2}$ ,  $t \in [-3, 3]$ ,  $i = 1, 2, \dots, 21$ , where  $z_{i,1}$  and  $z_{i,2}$  are *i.i.d.* normal with mean one and standard deviation 0.25. Each of these functions is then warped according to:  $\gamma_i(t) = 6\left(\frac{e^{a_i(t+3)/6}-1}{e^{a_i}-1}\right) - 3$  if  $a_i \neq 0$ , otherwise  $\gamma_i = \gamma_{id}$  ( $\gamma_{id}(t) = t$  is the identity warping). The variables are as follows: f containing the 21 functions of 101 samples and time which describes the sampling which has been aligned

**Usage**

```
data("simu_warp")
```

**Format**

A list which contains the outputs of the time\_warping function

---

simu_warp_median	<i>Aligned Simulated two Gaussian Dataset using Median</i>
------------------	--

---

**Description**

A functional dataset where the individual functions are given by:  $y_i(t) = z_{i,1}e^{-(t-1.5)^2/2} + z_{i,2}e^{-(t+1.5)^2/2}$ ,  $t \in [-3, 3]$ ,  $i = 1, 2, \dots, 21$ , where  $z_{i,1}$  and  $z_{i,2}$  are *i.i.d.* normal with mean one and standard deviation 0.25. Each of these functions is then warped according to:  $\gamma_i(t) = 6\left(\frac{e^{a_i(t+3)/6}-1}{e^{a_i}-1}\right) - 3$  if  $a_i \neq 0$ , otherwise  $\gamma_i = \gamma_{id}$  ( $\gamma_{id}(t) = t$ ) is the identity warping). The variables are as follows: f containing the 21 functions of 101 samples and time which describes the sampling which has been aligned

**Usage**

```
data("simu_warp_median")
```

**Format**

A list which contains the outputs of the time\_warping function finding the median

---

smooth.data	<i>Smooth Functions</i>
-------------	-------------------------

---

**Description**

This function smooths functions using standard box filter

**Usage**

```
smooth.data(f, sparam)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
sparam	number of times to run box filter

**Value**

fo smoothed functions

**References**

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

**Examples**

```
data("simu_data")
fo = smooth.data(simu_data$f,25)
```

---

SqrtMean

*SRVF transform of warping functions*

---

**Description**

This function calculates the srvf of warping functions with corresponding shooting vectors and finds the mean

**Usage**

```
SqrtMean(gam)
```

**Arguments**

gam                    matrix ( $N \times M$ ) of  $M$  warping functions with  $N$  samples

**Value**

Returns a list containing

mu	Karcher mean psi function
gam_mu	Karcher mean warping function
psi	srvf of warping functions
vec	shooting vectors

**References**

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

**Examples**

```
data("simu_warp")
out = SqrtMean(simu_warp$gam)
```

---

SqrtMedian	<i>SRVF transform of warping functions</i>
------------	--

---

### Description

This function calculates the srvf of warping functions with corresponding shooting vectors and finds the median

### Usage

```
SqrtMedian(gam)
```

### Arguments

gam                    matrix ( $N \times M$ ) of  $M$  warping functions with  $N$  samples

### Value

Returns a list containing

median	Karcher median psi function
gam_median	Karcher mean warping function
psi	srvf of warping functions
vec	shooting vectors

### References

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

### Examples

```
data("simu_warp_median")
out = SqrtMedian(simu_warp_median$gam)
```

---

srsf_to_f	<i>Convert SRSF to f</i>
-----------	--------------------------

---

**Description**

This function converts SRSFs to functions

**Usage**

```
srsf_to_f(q, time, f0 = 0)
```

**Arguments**

q	matrix of srsf
time	time
f0	initial value of f

**Value**

f matrix of functions

**References**

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

Tucker, J. D., Wu, W., Srivastava, A., Generative Models for Function Data using Phase and Amplitude Separation, Computational Statistics and Data Analysis (2012), 10.1016/j.csda.2012.12.001.

**Examples**

```
data("simu_data")
q = f_to_srvf(simu_data$f, simu_data$time)
f = srsf_to_f(q, simu_data$time, simu_data$f[1,])
```

---

time_warping	<i>Group-wise function alignment</i>
--------------	--------------------------------------

---

**Description**

This function aligns a collection of functions using the elastic square-root slope (srsf) framework.

**Usage**

```
time_warping(f, time, lambda = 0, method = "mean", showplot = TRUE,
  smooth_data = FALSE, sparam = 25, parallel = FALSE,
  omethod = "DP", MaxItr = 20)
```

**Arguments**

f	matrix ( $N \times M$ ) of $M$ functions with $N$ samples
time	vector of size $N$ describing the sample points
lambda	controls the elasticity (default = 0)
method	warp and calculate to Karcher Mean or Median (options = "mean" or "median", default = "mean")
showplot	shows plots of functions (default = T)
smooth_data	smooth data using box filter (default = F)
sparam	number of times to apply box filter (default = 25)
parallel	enable parallel mode using <code>foreach</code> and <code>doParallel</code> package (default=F)
omethod	optimization method (DP,DP2,RBFGS)
MaxItr	maximum number of iterations

**Value**

Returns a `fdawarp` object containing

<code>f0</code>	original functions
<code>fn</code>	aligned functions - matrix ( $N \times M$ ) of $M$ functions with $N$ samples
<code>qn</code>	aligned SRSFs - similar structure to <code>fn</code>
<code>q0</code>	original SRSF - similar structure to <code>fn</code>
<code>fmean</code>	function mean or median - vector of length $N$
<code>mqn</code>	SRSF mean or median - vector of length $N$
<code>gam</code>	warping functions - similar structure to <code>fn</code>
<code>orig.var</code>	Original Variance of Functions
<code>amp.var</code>	Amplitude Variance
<code>phase.var</code>	Phase Variance
<code>qun</code>	Cost Function Value

**References**

**Examples**

```
## Not run:
data("simu_data")
out = time_warping(simu_data$f, simu_data$time)

## End(Not run)
```

---

toy_data	<i>Distributed Gaussian Peak Dataset</i>
----------	--

---

**Description**

A functional dataset where the individual functions are given by a Gaussian peak with locations along the  $x$ -axis. The variables are as follows:  $f$  containing the 29 functions of 101 samples and time which describes the sampling

**Usage**

```
data("toy_data")
```

**Format**

A list which contains  $f$  and time

---

toy_warp	<i>Aligned Distributed Gaussian Peak Dataset</i>
----------	--

---

**Description**

A functional dataset where the individual functions are given by a Gaussian peak with locations along the  $x$ -axis. The variables are as follows:  $f$  containing the 29 functions of 101 samples and time which describes the sampling which as been aligned

**Usage**

```
data("toy_warp")
```

**Format**

A list which contains the outputs of the time\_warping function

---

`vertFPCA`*Vertical Functional Principal Component Analysis*

---

**Description**

This function calculates vertical functional principal component analysis on aligned data

**Usage**

```
vertFPCA(warp_data, no, id = round(length(warp_data$time)/2),  
         showplot = TRUE)
```

**Arguments**

<code>warp_data</code>	fdawarp object from <a href="#">time_warping</a> of aligned data
<code>no</code>	number of principal components to extract
<code>id</code>	point to use for $f(0)$ (default = midpoint)
<code>showplot</code>	show plots of principal directions (default = T)

**Value**

Returns a `vfpc` object containing

<code>q_pca</code>	svf principal directions
<code>f_pca</code>	f principal directions
<code>latent</code>	latent values
<code>coef</code>	coefficients
<code>U</code>	eigenvectors
<code>id</code>	point used for $f(0)$

**Examples**

```
data("simu_warp")  
vfpc = vertFPCA(simu_warp, no = 3)
```

---

warp_f_gamma	<i>Warp Function</i>
--------------	----------------------

---

**Description**

This function warps function  $f$  by  $\gamma$

**Usage**

```
warp_f_gamma(f, time, gamma, spl.int = FALSE)
```

**Arguments**

f	vector function
time	time
gamma	vector warping function
spl.int	use spline interpolation (default F)

**Value**

fnew warped function

**References**

Srivastava, A., Wu, W., Kurtek, S., Klassen, E., Marron, J. S., May 2011. Registration of functional data using fisher-rao metric, arXiv:1103.3817v2 [math.ST].

**Examples**

```
data("simu_data")
fnew = warp_f_gamma(simu_data$f[,1],simu_data$time,seq(0,1,length.out=101))
```

---

warp_q_gamma	<i>Warp SRSF</i>
--------------	------------------

---

**Description**

This function warps srsf  $q$  by  $\gamma$

**Usage**

```
warp_q_gamma(q, time, gamma, spl.int = FALSE)
```

**Arguments**

q	vector
time	time
gamma	vector warping function
spl.int	use spline interpolation (default F)

**Value**

qnew warped function

**References**

**Examples**

```
data("simu_data")
q = f_to_srvf(simu_data$f, simu_data$time)
qnew = warp_q_gamma(q[,1], simu_data$time, seq(0,1, length.out=101))
```
