e_add *Add nested data*

Description

Utility function to add data where the original JavaScript library expects nested data.

Usage

```
e_add(e, param, ...)
```

Arguments

e	An echarts4r object as returned by e_charts.
param	The nested parameter to add data to.
...	Any other option to pass, check See Also section.

Details

For instance, e_funnel lets you pass values and labels (from your initial data.frame) which corresponds to name and value in the original library[3]. However the latter also takes, label, itemStyle, and emphasis but being JSON arrays they translate to lists in R and dealing with nested data.frames is not ideal. e_add remedies to that. It allows adding those nested data points, see the examples below.

[3] https://echarts.apache.org/en/option.html#series-heatmap.data

Examples

```
# funnel can take nested itemStyle
# https://echarts.apache.org/en/option.html#series-funnel.data
funnel <- data.frame(
  stage = c("View", "Click", "Purchase"),
  value = c(80, 30, 20),
  color = c("blue", "red", "green")
)

funnel %>%
  e_charts() %>%
  e_funnel(value, stage) %>%
  e_add("itemStyle", color)

# Heatmap can take nested label
# https://echarts.apache.org/en/option.html#series-heatmap.data
v <- LETTERS[1:10]
matrix <- data.frame(
  x = sample(v, 300, replace = TRUE),
  y = sample(v, 300, replace = TRUE),
  z = rnorm(300, 10, 1),
  stringsAsFactors = FALSE
) %>%
  dplyr::group_by(x, y) %>%
  dplyr::summarise(z = sum(z)) %>%
  dplyr::ungroup() %>%
  dplyr::mutate(
    show = TRUE,
    fontStyle = round(runif(dplyr::n(), 5, 12))
  )

matrix %>%
  e_charts(x) %>%
  e_heatmap(y, z) %>%
  e_visual_map(z) %>%
  e_add(
    "label",
    show,
    fontStyle
  )
```

`e_animation` *Animation*

Description

Customise animations.

Usage

```
e_animation(e, show = TRUE, threshold = NULL, duration = NULL,
  easing = NULL, delay = NULL, duration.update = NULL,
  easing.update = NULL, delay.update = NULL)
```

Arguments

e	An echarts4r object as returned by e_charts.
show	Set to show animation.
threshold	Whether to set graphic number threshold to animation. Animation will be disabled when graphic number is larger than threshold.
duration	Duration of the first animation.
easing	Easing method used for the first animation.
delay	Delay before updating the first animation.
duration.update	Time for animation to complete.
easing.update	Easing method used for animation.
delay.update	Delay before updating animation.

e_append2_p(proxy, series_index = NULL, data, x, y, z, scale = NULL,
  symbol_size = 1)

e_append2_p_(proxy, series_index = NULL, data, x, y, z, scale = NULL,
