

# Package ‘extras’

September 26, 2020

**Title** Helper Functions for Bayesian Analyses

**Version** 0.1.0

**Description** Functions to 'numericise' 'R' objects (coerce to numeric objects) and summarise 'MCMC' (Monte Carlo Markov Chain) samples as well as 'R' translations of 'BUGS' (Bayesian Using Gibbs Sampling) and 'JAGS' (Just Another Gibbs Sampler) functions.

**License** MIT + file LICENSE

**URL** <https://poissonconsulting.github.io/extras/>,  
<https://github.com/poissonconsulting/extras>

**BugReports** <https://github.com/poissonconsulting/extras/issues>

**Depends** R (>= 3.3)

**Imports** chk, stats

**Suggests** covr, hms, knitr, testthat, tibble

**Encoding** UTF-8

**Language** en-US

**LazyData** true

**RoxygenNote** 7.1.1

**NeedsCompilation** no

## Index 21

---

as_list_unnamed	<i>As List</i>
-----------------	----------------

---

### Description

Coerces an object to an list. All attributes are removed except any names.

### Usage

```
as_list_unnamed(x, ...)
```

```
## Default S3 method:  
as_list_unnamed(x, ...)
```

### Arguments

x	An object.
...	Other arguments passed to methods.

### Value

A list.

### Examples

```
as_list_unnamed(1:3)  
as_list_unnamed(c(x = 1, y = 2))
```

---

`chk_index`*Check Index*

---

**Description**

Checks if an object is a vector of one or more positive integer values.

**Usage**

```
chk_index(x, x_name = NULL)
```

```
vld_index(x)
```

**Arguments**

<code>x</code>	An object.
<code>x_name</code>	A string of the name of object <code>x</code> or <code>NULL</code> .

**Value**

The `chk_` function throws an informative error if the test fails.

The `vld_` function returns a flag indicating whether the test was met.

**Functions**

- `vld_index`: Validate Index

**Examples**

```
x <- c(2L, 1L)
chk_index(x)
y <- c(2L, -1L)
try(chk_index(y))
vld_index(c(-1))
vld_index(c(3L, 1L))
```

---

`chk_indices`*Check Indices*

---

**Description**

Checks if an object is a list of indices ie vectors of one or more positive integer values.

**Usage**

```
chk_indices(x, x_name = NULL)
```

```
vld_indices(x)
```

**Arguments**

x                    An object.  
x\_name                A string of the name of object x or NULL.

**Value**

The `chk_` function throws an informative error if the test fails.

The `vld_` function returns a flag indicating whether the test was met.

**Functions**

- `vld_indices`: Validate Indices

**Examples**

```
x <- list(c(2L, 1L))  
chk_indices(x)  
y <- c(2L, 1L)  
try(chk_indices(y))  
vld_indices(c(3L, 1L))  
vld_indices(list(c(3L, 1L)))
```

---

chk\_pars

*Check Parameter Names*

---

**Description**

Checks if valid parameter names.

**Usage**

```
chk_pars(x, x_name = NULL)
```

```
vld_pars(x)
```

**Arguments**

x                    An object.  
x\_name                A string of the name of object x or NULL.

**Details**

The character vector must consist of values that start with an alpha and only include alphanumeric characters and '\_' or '.'.

Missing values and duplicates are permitted.

**Value**

The `chk_` function throws an informative error if the test fails.

The `vld_` function returns a flag indicating whether the test was met.

**Functions**

- `vld_pars`: Validate Parameter Names

**Examples**

```
x <- c("x", "a1._", "X")
chk_pars(x)
y <- c("x[1]", "a1", "a1", "._0")
try(chk_pars(y))
vld_pars(c("x", "a1._", "X"))
vld_pars(c("x[1]", "a1", "a1", "._0"))
```

---

fill\_all

*Fill All Values*

---

**Description**

Fills all of an object's (missing and non-missing) values while preserving the object's dimensionality and class.

**Usage**

```
fill_all(x, value, ...)

## S3 method for class 'logical'
fill_all(x, value = FALSE, nas = TRUE, ...)

## S3 method for class 'integer'
fill_all(x, value = 0L, nas = TRUE, ...)

## S3 method for class 'numeric'
fill_all(x, value = 0, nas = TRUE, ...)

## S3 method for class 'character'
fill_all(x, value = "0", nas = TRUE, ...)
```

**Arguments**

x	An object.
value	A scalar of the value to replace values with.
...	Other arguments passed to methods.
nas	A flag specifying whether to also fill missing values.

**Value**

The modified object.

**Methods (by class)**

- logical: Fill All for logical Objects
- integer: Fill All for integer Objects
- numeric: Fill All for numeric Objects
- character: Fill All for character Objects

**See Also**

Other fill: [fill\\_na\(\)](#)

**Examples**

```
# logical
fill_all(c(TRUE, NA, FALSE))
fill_all(c(TRUE, NA, FALSE, nas = FALSE))
fill_all(c(TRUE, NA, FALSE, value = NA))

# integer
fill_all(matrix(1:4, nrow = 2), value = -1)

# numeric
fill_all(c(1, 4, NA), value = TRUE)
fill_all(c(1, 4, NA), value = TRUE, nas = FALSE)

# character
fill_all(c("some", "words"), value = TRUE)
```

---

fill\_na

*Fill Missing Values*

---

**Description**

Fills an object's missing values while preserving the object's class.

**Usage**

```
fill_na(x, value, ...)  
  
## S3 method for class 'logical'  
fill_na(x, value = FALSE, ...)  
  
## S3 method for class 'integer'  
fill_na(x, value = 0L, ...)  
  
## S3 method for class 'numeric'  
fill_na(x, value = 0, ...)  
  
## S3 method for class 'character'  
fill_na(x, value = "0", ...)
```

**Arguments**

x	An object.
value	A scalar of the value to replace values with.
...	Other arguments passed to methods.

**Value**

The modified object.

**Methods (by class)**

- logical: Fill Missing Values for logical Objects
- integer: Fill Missing Values for integer Objects
- numeric: Fill Missing Values for numeric Objects
- character: Fill Missing Values for character Objects

**See Also**

Other fill: [fill\\_all\(\)](#)

**Examples**

```
# logical  
fill_na(c(TRUE, NA))  
  
# integer  
fill_na(c(1L, NA), 0)  
  
# numeric  
fill_na(c(1, NA), Inf)
```

```
# character
fill_na(c("text", NA))
fill_na(matrix(c("text", NA)), value = Inf)
```

---

**ilogit***Inverse Logistic Transformation*

---

### Description

Inverse logistically transforms a numeric atomic object.

### Usage

```
ilogit(x)
```

### Arguments

x                    A numeric atomic object.

### Details

A wrapper on `stats::plogis()`.

### Value

A numeric atomic object.

### See Also

Other translations: `log<-()`, `logit<-()`, `logit()`, `phi()`, `pow()`

### Examples

```
ilogit(c(-1, 0, 5))
```

---

`log<-`*Log Transformation*

---

**Description**

Replaces a object with the exponent of value.

**Usage**

```
log(x) <- value
```

**Arguments**

<code>x</code>	An existing R object.
<code>value</code>	A numeric atomic object.

**Details**

A wrapper on `exp(value)`.

**Value**

Called for the side effect of updating `x`.

**See Also**

Other translations: `ilogit()`, `logit<-()`, `logit()`, `phi()`, `pow()`

**Examples**

```
x <- NULL
log(x) <- 0.5
x
```

---

`logit`*Logistic Transformation*

---

**Description**

Logistic transforms a numeric atomic object.

**Usage**

```
logit(x)
```

**Arguments**

x                    A numeric atomic object.

**Details**

A wrapper on `stats::qlogis()`.

**Value**

The logistically transformed numeric atomic object.

**See Also**

Other translations: `ilogit()`, `log<-()`, `logit<-()`, `phi()`, `pow()`

**Examples**

```
logit(c(0.25, 0.5, 0.75))
```

---

logit<-                    *Logistic Transformation*

---

**Description**

Logistic Transformation

**Usage**

```
logit(x) <- value
```

**Arguments**

x                    An existing object.  
value                A numeric atomic object of the value to inverse logistically transform.

**Details**

A wrapper on `stats::plogis(value)`.

**Value**

Called for the side effect of updating x.

**See Also**

Other translations: `ilogit()`, `log<-()`, `logit()`, `phi()`, `pow()`

**Examples**

```
x <- 1
logit(x) <- 0.5
x
```

---

lower	<i>Lower Credible Limit</i>
-------	-----------------------------

---

**Description**

Calculates the quantile-based lower credible limit.

**Usage**

```
lower(x, conf_level = 0.95)
```

**Arguments**

`x` A numeric vector of MCMC values.  
`conf_level` A numeric scalar between 0 and 1 specifying the confidence level.

**Details**

By default it returns the 95% credible limit which corresponds to the 2.5% quantile.

**Value**

A number.

**See Also**

Other summary: [pvalue\(\)](#), [svalue\(\)](#), [upper\(\)](#), [zscore\(\)](#)

**Examples**

```
lower(as.numeric(0:100))
```

---

numericise	<i>Numericise (or Numericize)</i>
------------	-----------------------------------

---

**Description**

Coerce an R object to a numeric atomic object.

**Usage**

```
numericise(x, ...)  
  
numericize(x, ...)  
  
## S3 method for class 'logical'  
numericise(x, ...)  
  
## S3 method for class 'integer'  
numericise(x, ...)  
  
## S3 method for class 'double'  
numericise(x, ...)  
  
## S3 method for class 'factor'  
numericise(x, ...)  
  
## S3 method for class 'Date'  
numericise(x, ...)  
  
## S3 method for class 'POSIXct'  
numericise(x, ...)  
  
## S3 method for class 'hms'  
numericise(x, ...)  
  
## S3 method for class 'matrix'  
numericise(x, ...)  
  
## S3 method for class 'array'  
numericise(x, ...)  
  
## S3 method for class 'data.frame'  
numericise(x, ...)
```

**Arguments**

x	An object.
...	Other arguments passed to methods.

**Details**

numericize() is an alias for numericise. If you want to implement a method for a class "foo", implement numericise.foo().

**Value**

A numeric atomic object.

**Methods (by class)**

- logical: Numericise a logical Object
- integer: Numericise an integer Object
- double: Numericise an double Object
- factor: Numericise a factor
- Date: Numericise a Date vector
- POSIXct: Numericise a POSIXct vector
- hms: Numericise a hms vector
- matrix: Numericise a matrix
- array: Numericise an array
- data.frame: Numericise a data.frame

**Examples**

```
# logical
numericise(TRUE)
numericise(matrix(c(TRUE, FALSE), nrow = 2))

# integer
numericise(2L)

# double
numericise(c(1, 3))

# factor
numericise(factor(c("c", "a")))

# Date
numericise(as.Date("1972-01-01"))

# POSIXct
numericise(as.POSIXct("1972-01-01", tz = "UTC"))

# hms
numericise(hms::as_hms("00:01:03"))

# matrix
numericise(matrix(TRUE))
```

```

# array
numericise(array(TRUE))

# data.frame
numericise(data.frame(
  logical = c(TRUE, FALSE, NA),
  integer = 1:3,
  numeric = c(4, 10, NA),
  factor = as.factor(c("c", "A", "green"))
))

```

---

par_pattern	<i>Parameter Pattern</i>
-------------	--------------------------

---

**Description**

Parameter Pattern

**Usage**

```
par_pattern()
```

**Value**

A string of the regular expression for a parameter name.

**Examples**

```
par_pattern()
```

---

pextreme	<i>Extreme Probability</i>
----------	----------------------------

---

**Description**

Calculates the probability that a cumulative distribution function probability is at least that extreme.

**Usage**

```
pextreme(x)
```

**Arguments**

x                    A numeric vector of values between 0 and 1.

**Value**

A numeric vector of values between 0 and 1.

**See Also**

Other residuals: [sextreme\(\)](#)

**Examples**

```
pextreme(seq(0, 1, by = 0.1))
```

---

*phi*

*Phi*

---

**Description**

The standard normal cumulative density function.

**Usage**

```
phi(x)
```

**Arguments**

*x*                    A numeric atomic object.

**Details**

A wrapper on [stats::pnorm\(\)](#).

**Value**

A numeric atomic object.

**See Also**

Other translations: [ilogit\(\)](#), [log<-\(\)](#), [logit<-\(\)](#), [logit\(\)](#), [pow\(\)](#)

**Examples**

```
phi(0:2)
```

---

pow

*Power*

---

### Description

R equivalent to the power function.

### Usage

```
pow(x, n)
```

### Arguments

x                    A numeric atomic object of the base.  
n                    A numeric atomic object of the exponent.

### Details

Wrapper on  $x^n$ .

### Value

A numeric atomic object of  $x$  raised to  $n$ .

### See Also

Other translations: [ilogit\(\)](#), [log<-\(\)](#), [logit<-\(\)](#), [logit\(\)](#), [phi\(\)](#)

### Examples

```
pow(10, 2)
```

---

pvalue

*Bayesian P-Value*

---

### Description

A Bayesian p-value ( $p$ ) is here defined in terms of the quantile-based  $(1-p) * 100\%$  credible interval (CRI) that just includes 0 (Kery and Schaub 2011). In other words a p-value of 0.05 indicates that the 95% CRI just includes 0.

### Usage

```
pvalue(x)
```

**Arguments**

x                    A numeric vector of MCMC values.

**Value**

A number between 0 and 1.

**References**

Kery, M., and Schaub, M. 2011. Bayesian population analysis using WinBUGS: a hierarchical perspective. Academic Press, Boston. Available from <https://www.vogelwarte.ch/de/projekte/publikationen/bpa/>.

**See Also**

Other summary: [lower\(\)](#), [svalue\(\)](#), [upper\(\)](#), [zscore\(\)](#)

**Examples**

```
pvalue(as.numeric(0:100))
```

---

sextreme

*Extreme Surprisal*

---

**Description**

Calculates the surprisal (in bits) that a cumulative distribution function probability is at least that extreme.

**Usage**

```
sextreme(x, directional = FALSE)
```

**Arguments**

x                    A numeric vector of values between 0 and 1.  
directional        A flag indicating whether probabilities less than 0.5 should be returned as negative values.

**Details**

Useful for treating the cdf probabilities as residuals particularly when directional = TRUE.

**Value**

A numeric vector of surprisal values.

**See Also**

Other residuals: [pextreme\(\)](#)

**Examples**

```
sxtreme(seq(0.1, 0.9, by = 0.1))  
sxtreme(seq(0.1, 0.9, by = 0.1), directional = TRUE)
```

---

svalue

*Surprisal Value*

---

**Description**

The surprisal value (Greenland 2019) is the [pvalue](#) expressed in terms of how many consecutive heads would have to be thrown on a fair coin in a single attempt to achieve the same probability.

**Usage**

```
svalue(x)
```

**Arguments**

x                    A numeric object of MCMC values.

**Value**

A non-negative number.

**References**

Greenland, S. 2019. Valid P -Values Behave Exactly as They Should: Some Misleading Criticisms of P -Values and Their Resolution With S -Values. *The American Statistician* 73(sup1): 106–114. <https://doi.org/10.1080/00031305.2018.1529625>.

Other summary: [lower\(\)](#), [pvalue\(\)](#), [upper\(\)](#), [zscore\(\)](#)

**Examples**

```
svalue(as.numeric(0:100))
```

---

upper	<i>Upper Credible Limit</i>
-------	-----------------------------

---

**Description**

Calculates the quantile-based upper credible limit.

**Usage**

```
upper(x, conf_level = 0.95)
```

**Arguments**

`x` A numeric vector of MCMC values.  
`conf_level` A numeric scalar between 0 and 1 specifying the confidence level.

**Details**

By default it returns the 95% credible limit which corresponds to the 97.5% quantile.

**Value**

A number.

**See Also**

Other summary: [lower\(\)](#), [pvalue\(\)](#), [svalue\(\)](#), [zscore\(\)](#)

**Examples**

```
upper(as.numeric(0:100))
```

---

zscore	<i>Z-Score</i>
--------	----------------

---

**Description**

The Bayesian z-score is here defined as the number of standard deviations from the mean estimate to zero.

**Usage**

```
zscore(x)
```

**Arguments**

`x` A numeric object of MCMC values.

**Value**

A number.

**See Also**

Other summary: [lower\(\)](#), [pvalue\(\)](#), [svalue\(\)](#), [upper\(\)](#)

**Examples**

```
zscore(as.numeric(0:100))
```
